FOREIGN LANGUAGE

One foreign language out of the following

French	LANF0101
German	LANG0102
Spanish	LANS0103

SEMESTER-I

English

L T P 3 0 0

MODULE CODE	ENGL0101
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to vocabulary, synonyms, anatomize and to enhance English language skills as mentioned below:

- 1. To achieve knowledge and understanding on fundamentals of English Language and various aspects of it.
- 2. To get familiar with the rules of Grammar and their correct usage.
- 3. To enhance the creativity of the students related to verbal ability and reasoning or fluency of language.
- 4. To acquire knowledge and understanding the basic concepts of English language and its application in Science and & Engineering.
- 5. To acquire knowledge for the correct usage of technical English.

- 1. Able to achieve knowledge and understanding on fundamentals of English Language.
- 2. Able to get familiar with the rules of Grammar and their correct usage.
- 3. Enhance the creativity of the students related to verbal ability and reasoning or fluency of English.
- 4. Ability to acquire knowledge for the correct usage of technical English.

MODULE CONTENTS:

Unit I: Communicative Grammar

Communicative Grammar: Spotting the errors pertaining to parts of speech, nouns, pronouns, adjective, adverbs, preposition, conjunction, genders, infinitives, participles, form of Tenses, use of articles ;Concord - grammatical concord, notional Concord and the principle of proximity between subject and verb and other exceptional usages.

Unit II: Lexis

Lexis: Words often confused; One-Word Substitutes; Foreign Words (A selected list may be included for all the above components); Formation of Words (suffixes, prefixes and derivatives)..

Unit III: Introduction to principal components of spoken English

Introduction to principal components of spoken English – Phonetics, Word-stress patterns, Intonation, Weak forms in English.

Unit IV: Developing listening and speaking skills through various activities

Developing listening and speaking skills through various activities, such As: Role play activities Practicing short dialogues Group discussion Debates Speeches Listening to news bulletins Viewing and reviewing T.V. programs etc.

Unit V: Written Communication

Written Communication: Developing reading and writing skills through such tasks/activities as developing outlines, key expressions, situations, slogan writing and theme building exercises. Reading verbal and non-verbal texts like cartoons, Graphs and tabulated data etc.

Unit VI: Technical Writing

Business Letters, Format of Business letters and Business letter writing-Fully- blocked layout may be used-mail writing; Reports, Types of Reports and Format of Formal Reports; Press Report Writing.

RECOMMENDED BOOKS:

	1. Basic Business Communication: Raymond V Lesikar Mc A					
	Graw Hill publications.					
TEXT BOOKS	2. Communication Skills: D G Saxena, Kuntal Tamang Top					
	Quark,New Delhi.					
	3. A textbook of English Phonetics for Indian Students:					
	TBalasubramanian Macmillan India Limited, New Delhi.					
	1. Living English Structures:W S Allen Pearson Publications,					
	New Delhi.					
REFERENCE BOOKS	2. High School English Grammar and Composition: P C Wren and					
	H Martin S.Chand Publications, New Delhi.					
3. Essentials of Communication: B R Sharma and San						
	Bharat publications, Yamuna Nagar					

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning	1,2,3	1,2,3	1,2,	123	2.4	3.1	1 /	31	2.5	1,2,	15
Outcomes	,4	,4	3	1,2,3	2,4	5,4	1,4	5,4	2,3	3,5	1,5

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	05
2.	Sessional Test	2	15
3.	Group Discussion	4	05
4.	End Semester Exam	1	75

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4
Class Test	Х	Х		
Quiz	Х	Х	х	х
Assignment			х	Х

EVALUATION

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER-I

Applied Mathematics-I

L T P 3 1 0

MODULE CODE	MATH0101
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

- 1. To achieve knowledge and understanding on fundamentals of matrices, their various properties and capabilities to model and solve wide range of problems in science and engineering.
- 2. To get familiar with concepts of differential calculus and develop ability to solve simple problems.
- 3. To understand multiple integrals and their applications in engineering problems.
- 4. To learn basic concepts of probability and its application in realistic decision making.
- 5. To acquire knowledge of statistical hypothesis testing and assess their effectiveness in problem solving.

- 1. Able to understand the evolution of matrices and their applications.
- 2. Exposure to differential calculus and their capabilities to solve problems.
- 3. Enhance the knowledge of multiple integrals.
- 4. Able to understand concepts of probability and its application.
- 5. Ability to acquire knowledge of statistical hypothesis testing and assess their effectiveness.

MODULE CONTENTS:

UNIT-I: Matrices & their Applications						
Rank of a matrix, elementary transformations, elementary matrices, inverse using						
elementary transformations, normal form of a matrix, linear dependence and in						
dependence of vectors, consistency of linear system of equations, linear and orthogonal						
transformations, Eigen values and Eigen vectors, properties of Eigen values, Cayley -						
Hamilton theorem and its applications. Determinants and their evaluations.						
UNIT-II: Applications of Differentiation						
Taylor's and McLaurin's series, Asymptotes and Curvature.						
Partial Differentiation & its Applications : Functions of two or more variables; partial						
derivatives, Total differential and differentiability, Derivatives of composite and implicit						
functions, Jacobians, Higher order partial derivatives.						
UNIT-III: Applications of Differentiation contd.						
Homogeneous functions, Euler's theorem, Taylor's series for functions of two variables						
(without proof), maxima-minima of function of two variables, Lagrange's method of						
undetermined multipliers, Differentiation under integral sign						
UNIT-IV: Multiple Integration						
Double integral, change of order of integration, Double integral in polar coordinates,						
Applications of double integral to find area enclosed by plane curves and volume of						
solids of revolution.						
UNIT-V: Multiple Integration contd.						
Triple integral, volume of solids, change of variables, Beta and gamma functions and						
relationship between them.						
UNIT-VI: Probability Distributions & Hypothesis Testing						

Conditional probability, Bayes theorem and its applications, expected value of a random variable. Properties and application of Binomial, Poisson and Normal distributions.

Testing of a hypothesis, tests of significance for large samples, Student's t-distribution (applications only) and Chi-square test of goodness of fit. Chi-square test of independent events, F- Test.

RECOMMENDED BOOKS:

	1. Higher Engineering Mathematics: B.S. Grewal, Khanna					
	Publishers, New Delhi.					
TEXT BOOKS	2. Advanced Engineering Mathematics, Erwin Kreyszig,					
	John Wiley & Sons, Inc., New York.					
	3. Advanced Engineering Mathematics, Peter V. O'Neil,					
	Thomson Learning, Inc., Singapore.					
	1. Advanced Engineering Mathematics, R.K. Jain and					
DEFEDENCEDOOKS	S.R.K. Iyengar, Alpha science International Ltd. Pang					
KEFEKENCEDUUKS	Bourne, England.					
	2. Advanced Engineering Mathematics, Michael D					
	Greenberg, Prentice-Hall, Englewood Cliffs, NJ.					

MAPPING OF COURSE LEARNING OUTCOMES

SEMESTER-I

Industrial Chemistry

L T P 3 0 0

MODULE CODE	CHEM0101
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to fuel, lubricants and to enhance skills of industrial chemistry as mentioned below:

- 1. To achieve knowledge and understanding the phase rule for different systems and further for various engineering applications.
- 2. To get familiar with the importance of water, impurities in water & their effects like hardness, alkalinity & biological effects.
- 3. To understand & solve the problems like scale and sludge formation, boiler corrosion due to impurities present in water used for industrial purpose.
- 4. To learn basic concepts about the process of corrosion of different metals & its types with mechanism and cause.
- 5. To know various factors that can effect corrosion and to be able to produce different methods for prevention of corrosion of different metals used in machines.
- 6. To have knowledge of different lubricants and to use different lubricants for different machines.
- 7. To gain knowledge of different fuels and their efficiency.
- 8. To acquire knowledge about the preparation & properties of different polymers and to be able to recognize the use of different polymers & their composites for engineering applications.

- 1. Students will be able to develop an insight about the way the chemistry is connected to other occupations and appreciation of the role of chemistry in day to day life in society and the skills of solving related industrial problems.
- 2. Students will be able to demonstrate their knowledge of removal of hardness of water and different water treatments methods in energy and environment related industries.
- 3. Graduates will be able to apply their knowledge of preventions of corrosions in different machinery systems.
- 4. Students will be able to demonstrate the application of different lubricants for various machinery problems and energy usage as well as the influence of human and industrial activities on the environment.
- 5. Students will show their interest in manufacturing different polymers and polymer composites by using different polymerization techniques and their application in industries.
- 6. Graduates will be able to develop their challenging careers in the field of chemicals, petroleum, petrochemical, polymer, pharmaceutical, food, biotechnology, microelectronics, energy and nano-materials processing.
- 7. Graduates will be able to perform laboratory experiments and proper use of standard chemistry glassware and equipment compare and collect quantitative data obtained from experimentation and using various analytical techniques.
- 8. Graduates will be able to communicate effectively through assignments, presentations and discussions in technical as well as in non technical domain.

MODULE CONTENTS:

UNIT-I: Phase Rule

Terminology, Gibb's phase rule equation, One component system (H₂O system and CO₂– system), Two components system: simple eutectic system (Pb–Ag), system with congruent melting point (Zn–Mg), system with incongruent melting point (Na–K), Applications of these systems and phase rule, Cooling curves.

UNIT-II: V Water & its treatment

Impurities in water & their effects, hardness of water and its determination (EDTA method), alkalinity of water and its determination, treatment of water for domestic use: coagulation, sedimentation, filtration and disinfection, water softening methods: Lime-Soda process, Zeolite process, Ion–exchange process, Related numerical problems.

UNIT-III: Corrosion and its prevention

Introduction, Chemical and Electrochemical corrosion, Types of corrosion: oxidation corrosion, galvanic corrosion, differential aeration corrosion, pitting corrosion, waterline corrosion, stress corrosion (caustic embrittlement), Factors affecting corrosion, preventive measures (Cathodic& anodic protection, electroplating, tinning, galvanization).

UNIT-IV: Lubricants and Fuels

Need for lubricants, Classification, general properties & applications of lubricants, Properties of lubricating oils (Flash & Fire point, Viscosity and Viscosity index, Saponification value, Iodine value, Acid value, Aniline point), Definition and classification of fuel, Calorific value of fuels, Dulong' formula, Determination of calorific value of fuels (Bomb's calorimeter & Boy's Gas calorimeter), Related numerical problems.

UNIT-V: Polymers and Composites

Classification of polymers, types & mechanism of polymerization (Addition and condensation), preparation properties and technical application of thermoplastics (PE, PVC, Teflon), thermosets (UF, PF) and elastomers (synthetic rubbers: SBR, Nitrile rubber), Inorganic polymers (silicones), Polymeric composites (composition, advantages and application areas), Introduction to conducting polymers and conducting polymer composites.

UNIT-VI: Instrumental Methods of Analysis

Principle, instrumentation & general applications of thermal methods of analysis (TGA, DTA, DSC), Basic concepts of spectroscopy, Principal, instrumentation and general applications of spectroscopic techniques (UV-Vis spectroscopy, IR-spectroscopy & Flame photometery), Conductometric titrations, pH metry.

RECOMMENDED BOOKS:

TEXT BOOKS	1. Engineering Chemistry, P.C. Jain Monica Jain (Dhanpat Bai & Co)						
	 Fundamentals of Engineering Chemistry, Shashi Chawla (Dhanpat Rai & Co) 						
	3. <i>Chemistry for Engineers</i> , B.K. Ambasta (Luxmi Publication)						
	4. <i>Chemistry in Engineering & Tech</i> , Vol. I & II, Kuriacose (TMH)						
	1. Instrumental methods of Chemical analysis, MERITT &						
REFERENCES	WILLARD (EAST – WEST press)						
	2. <i>Physical Chemistry</i> , P.W Atkin (ELBS, OXFORD Press)						
	3. <i>Physical Chemistry</i> , W.J.Moore (Orient Longman)						

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	а	b	с	d	e	f	g	h	i	j	k

- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER-I

Industrial Chemistry Lab

L T P 0 0 2

MODULE CODE	CHEM0102
CREDIT POINTS	1
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to chemistry as mentioned below:

- 1. To achieve the practical knowledge of the importance of water and it's, impurities in water & their effects like hardness, alkalinity & biological effects.
- 2. To be able to understand & solve the problems like scale and sludge formation, boiler corrosion due to impurities present in water used for industrial purpose.
- 3. To get familiar with experimental methods for treatment of domestic water, water for industrial purpose.
- 4. To have knowledge of different properties of lubricants and further to use different lubricants for different machines.
- 5. To obtain data by cooling method for constructing a phase diagram which indicates the solid and liquid phase that is present at each temperature and composition.
- 6. To be effective in applying the basic concept of different polymerization synthesis techniques for preparation of different polymers and their applications.

LEARNING OUTCOMES:

- 1. Able to develop an insight about the way the chemistry is connected to other occupations and appreciation of the role of chemistry in day to day life in society and the skills of solving related industrial problems.
- 2. Able to perform laboratory experiments and proper use of chemicals in removal of hardness of water and different water treatments methods in energy and environment related industries.
- 3. Able to check the water samples for various purposes in industries, like chemical industry, Construction Company, pharmaceutical company and demonstrate the role of pure water in day to day life.
- 4. Able to demonstrate the application of different lubricants for various machinery problems.
- 5. Enhance the knowledge of different polymers by using some polymerization techniques in industries.
- 6. Ability to develop their challenging careers in the chemical, petroleum, petrochemical, polymer, pharmaceutical, food and other related industries compare quantitative data collected in the lab and interpret the data obtained from experimentation and using various analytical techniques.

MODULE CONTENTS:

1.	Determination of Ca ⁺² and Mg ⁺² hardness of water using EDTA solution
2.	Determination of alkalinity of water sample.
3.	Determination of dissolved oxygen (DO) in the given water sample.
4.	To determine TDS of Water samples of different sources.
5.	To find the eutectic point for a two component system by using method of cooling
	curve.
6.	To Prepare Urea formaldehyde and Phenol-formaldehyde resin.
7.	Determination of viscosity of lubricant by Red Wood Viscosity (No. 1 & N0. 2).
8.	To find out saponification no. of lubricating oil.
9.	Determination of concentration of KMnO4 solution spectrophotomererically.
10.	Determination of strength of HCl solution by titrating against NaOH solution
	conductometerically.
11.	To determine amount of sodium & potassium in given water sample by flame
	photometer.
12.	Determination of dissociation constant of a weak acid by pH-meter.
13.	Estimation of total iron in an iron alloy
Any	other experiment carried out in the laboratory.

RECOMMENDED BOOKS:

	1. Essential of Experimental Engineering Chemistry, Shashi
TEXT BOOKS	Chawla (DhanpatRai& Co.)
	2. Experiments in Applied Chemistry, SunitaRatan (S.K. Kataria& Sons)
	,

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1,2,3 ,4,6	1,2, 4	1,3,6	1,2,4	2,4, 6	1,4	1,2, 4,6	1,2,5	1,3	1,2 ,3, 6	1,2 ,3

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks.

Practical

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

EVALUATION

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER-I

Applied Physics I

L T P 3 1 0

MODULE CODE	PHYS0101
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to modern physics, interference, difference, polarization and to enhance skills of different type of laser and its applications as mentioned below:

- 1. To make students aware about Modern Physics, their various properties and capabilities tomodel and solve wide range of problems in science and engineering.
- 2. To acquire knowledge polarization and their applications in engineering problems.
- 3. To get familiar with concepts of interference and diffraction and develop ability to solve simple problems.
- 4. To learn basic concepts of different types of laser and its application in scientific problems.
- 5. To acquire knowledge of superconductivity implementation and assess their effectiveness in science and Technology.

- 1. Able to apply knowledge in developing advanced materials and devices.
- 2. Able to apply fundamental laws of superconductivity in engineering.
- 3. Able to identify and solve applied physics problems.
- 4. Able to apply knowledge to understand the concepts of fiber optics.
- 5. Ability to create new problems and solve with the help of applications used.

MODULE CONTENTS:

Unit I: Interference

Coherent sources, conditions for sustained interference. Division of Wave-Front, Fresnel's Biprism, Division of Amplitude- Wedge-shaped film, Newton's Rings, Michelson Interferometer, applications, Resolution of closely spaced spectral lines, determination of wavelengths.

Unit II: Diffraction

Difference between interference and diffraction, Fraunhofer and Fresnel diffraction, Zone Plate, Fraunhofer diffraction through a single slit, Plane transmission diffraction grating, absent spectra, dispersive power, resolving power and Rayleigh criterion of resolution.

Unit III: Polarization

Polarized and unpolarised light, Uni-axial crystals double refraction, Nicol prism, quarter and half wave plates, Detection and Production of different types of polarized light, Polarimetry, Optical and specific rotation, Biquartz and Laurent's haled shade polar meter

Unit IV: Laser & Fibre Optics

Absorption of radiation, spontaneous and stimulated emission, Laser action, Einstein Coefficient, characteristics of laser beam-concept of coherence, spatial and temporal coherence. He-Ne and semiconductor lasers (simple ideas), applications of Laser. Propagation of light in optical fibres, numerical aperture, V-number, single and multimode fibres, attenuation dispersion, applications.

Unit V: Nuclear Physics

Introduction, Radioactivity, Alpha decay, Gama decay, Q value, Threshold energy, Nuclear reactions, Nuclear fission: Liquid drop model, Nuclear fusion, Particle accelerators: Linear accelerator, Cyclotron.

Unit VI: Theory of Relativity

Introduction, Frame of reference, Galilean transformation, Michelson-Morley experiment, Postulates of special theory of relativity, Lorentz transformations, Length contraction, Time dilation, Mass energy relation.

RECOMMENDED BOOKS:

	1. Perspectives of Modern Physics, Arthur Beiser (TMH)			
TEXT BOOKS	2. Modern Physics for Engineers, S.P. Taneja (R. Chand).			
	3. Modern Engineering Physics, A.S. Vasudeva (S. Chand).			
	4. Engineering Physics, SatyaPrakash (PragatiPrakashan).			
	5. Optics, Ajoy Ghatak (TMH).			
	1. Fundamentals of Physics, Resnick& Halliday (Asian			
REFERENCEBOOKS	Book).			
	2. Introduction to Electrodynamics, D.J. Griffith (Prentice			
	Hall).			

MAPPING OF COURSE LEARNING OUTCOMES

SEMESTER-I

Applied Physics Lab I

LTP

0 0 2

MODULE CODE	PHYS0102
CREDIT POINTS	1
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

- 1. To achieve knowledge and understanding on Modern Physics, their various properties and capabilities to model and solve wide range of problems in science and engineering.
- 2. To get familiar with concepts of interference and diffraction and develop ability to solve simple problems.
- 3. To understand polarization and their applications in engineering problems.
- 4. To learn basic concepts of different types of laser and its application in scientific problems.
- 5. To acquire knowledge of superconductivity implementation and assess their effectiveness in science and Technology.

- 1. Able to apply knowledge for finding wavelength of sodium, colours of white light using advanced technology.
- 2. Able to apply fundamental laws of superconductivity in engineering and technology.
- 3. Able to identify new problems and solve through different techniques.
- 4. Able to apply knowledge to understand the concepts of fiber optics.
- 5. Able to develop new experiment using advances technology.

MODULE CONTENTS:

- 1. To find he wavelength of sodium light by Newton's rings experiment.
- 2. To find the wavelength of sodium light by Fresnel's biprism experiment.
- 3. To find the wavelength of various colours of white light with the help of a plane transmission diffraction grating.
- 4. To find the refractive index and cauchey's constants of a prism by using spectrometer.
- 5. To find the wavelength of sodium light by Michelson Interferometer.
- 6. To find the resolving power of a telescope.
- 7. To find the pitch of a screw using He-Ne laser.
- 8. To find the specific rotation of sugar solution by using a polar meter.
- 9. To compare the capacitances of two capacitors by De'sauty bridge and hence to find the dielectric constant of a medium.
- 10. To find the flashing and quenching potentials of Argon and also to find the capacitance of unknown capacitor.
- 11. To study the photo-conducting cell and hence to verity the inverse square law.
- 12. To find the temperature co-efficient of resistance by using platinum resistance thermometer and calendar and Griffin bridge.

RECOMMENDED BOOKS

TEXT BOOKS	1. Advanced Practical Physics - B.L. Workshop and H.T. Flint (KPH)
REFERENCES	 Practical Physics - S.L. Gupta & V. Kumar (Pragati Prakashan). Advanced Practical Physics Vol. I & II- Chauhan & Singh (Pragati Prakashan).

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks.

Practical

Assessment #	Type of Assessment	Per Semester	Maximum Marks
1	Internal Assessment	2	25
2	External Assessment	1	25

EVALUATION

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER-I

Electrical Technology

L T P 2 0 0

MODULE CODE	ECEN1101
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	50
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of teaching this subject is to impart knowledge primarily related to application of electricity so that learner will be able to make basic electrical circuits in real life. Some of the objectives of the course are:

- 1. To acquire basic knowledge of Electric Networks.
- 2. To inculcate the knowledge of AC and DC fundamentals.
- 3. To enable to solve electric circuit using various theorems and methods.
- 4. To get familiar with the concept of three phase circuit and its various connections.
- 5. To understand the concept of resonance in electrical network.
- 6. To gain knowledge of construction and working of Transformer.
- 7. To get exposure about working of AC and DC machines.

- 1. Able to understand basic aspects of electrical technology used in any kind of industry.
- 2. Able to understand various electrical applications in day to day life.
- 3. Get familiar with working of various components of a circuit.
- 4. Ability to analyze the behavior of electrical parameters in different forms.
- 5. Able to measure various electrical parameters.
- 6. Able to know the difference between single phase and three phase electrical supply.
- 7. Acquiring problem solving skills.

MODULE CONTENTS:

Unit I: D.C. Network Laws

Ohm's Law, Kirchhoff's Laws, Nodal and Loop methods of analysis Star to Delta & Delta to Star transformation.

Unit II: Network Theorems

Thevenin's theorem, Norton's theorem, superposition theorem, maximum power transfer theorem, Millman's theorem.

Unit III: Single Phase A.C. Circuits

Sinusoidal signal, instantaneous and peak values, RMS and average values, crest and peak factor, Concept of phase, representation-polar & rectangular.

Unit IV: Series and Parallel A.C. circuits

Series and Parallel A.C. circuits. Concept of active and reactive power, power factor, series and parallel resonance, Q factor, cut-off frequencies and bandwidth.

Unit V: Three Phase A.C. Circuits

Three phase A.C. circuit, star and delta connection, phase and line voltage and currents, balanced star and circuits, power equation, measurement of power by two wattmeter method, introduction to unbalanced circuits.

Unit VI: Transformers & Machines

Construction, EMF equation, ideal transformer, Phasor diagram on no load and full load, equivalent circuit, losses, regulation and efficiency, open and short circuit test. Introduction of AC and DC machines.

RECOMMENDED BOOKS:

	1. Electrical Technology (Vol-I), by B.L. Thareja & A. K.				
	Thareja, S. Chand publications.				
TEXT BOOKS	2. Electrical Technology (Vol-II), by B.L. Thareja& A. K.				
	Thareja, S. Chand publications.				
	3. Basic Electrical Engineering, II edition, by V. N. Mittal				
	& Arvind Mittal, TMH Publications.				
	1. Electrical Engineering Fundamentals : Deltoro, PHI				
	2. Network Analysis ; Valkenburg, PHI.				
	3. Electrical and Electronic Technology (8th Edition):				
REFERENCEBOOKS	Hughes, Pearson.				
	4. A textbook of Electrical Technology, J. B. Gupta, Katson				
	publication.				
	5. Electrical Technology by Mukesh Saini.				

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 75 marks.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	05
2.	Sessional Test	2	15
3.	Group Discussion	4	05
4.	End Semester Exam	1	50

SEMESTER-I

Electrical Technology Lab

L T P 0 0 2

MODULE CODE	
CREDIT POINTS	1
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

- 1. To get familiar with various measuring instruments.
- 2. To understand practical aspects of Network theorems.
- 3. To get familiar with major parts of electrical machines.
- 4. To aware students about precautionary measures of using Electrical supply.
- 5. To analyze different components of any electrical network.
- 6. To get familiar with the constructional part of transformer.

- 1. Creates implementation skills.
- 2. Able to measure various electrical parameters.
- 3. Able to understand various electrical applications in day to day life.
- 4. Get familiar with working environment of three phase electrical supply.
- 5. Ability to analyze the electrical connections.

LIST OF EXPERIMENTS:

1.	To verify ohm's law.
2.	To verify KCL and KVL.
3.	To verify Thevenin's theorem.
4.	To verify Norton theorem.
5.	To verify superposition theorem.
6.	To verify Maximum power transfer theorem.
7.	To measure power and power factor by 3 voltmeter method.
8.	To measure power and power factor by 3 ammeter method.
9.	To study the construction of Transformer.
10.	To study about function of multimeter.
Experi	ments based on advanced topics:
11.	To perform O.C. and S.C. tests of a transformer.
12.	To study frequency response of a series R-L-C circuit and determine resonant frequency and Q-factor for various values of R, L, and C.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

SEMESTER-I

Fundamentals of Computers (with 'C')

L T P 4 0 0

MODULE CODE	CSEN0101
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to components of computers, computer languages and to enhance skills of programming in 'C' language as mentioned below:

- 1. To make students aware of the evolution of computers in different generations including its classification in different categories based on its capabilities.
- 2. To acquire knowledge on major components of computers hardware, software, data and processes.
- 3. To get familiar with concepts of microprocessor interfacing and its applications.
- 4. To achieve an understanding on basic concepts of operating system and networking.
- 5. To demonstrate the working of system software.
- 6. To understand syntax and semantics of 'C' programming language.
- 7. To enable learner to build logic for a given problem and finally develop programs.

- 1. Able to understand the evolution of computer and basic terminology.
- 2. Exposure to various hardware and software and their compatibilities.
- 3. Enhance the knowledge regarding components and connectors such as ports etc to enable communication between computers.
- 4. Able to understand the basic functionality of OS and the process of secured data management.
- 5. Ability to differentiate the class of system software, its functionality versus application software.
- 6. Ability to create programs involving file handling and to understand the scenario of sequential as well as random data retrieval approach.

MODULE CONTENTS:

Unit I: Computers system and its fundamentals

Evolution of computers, hardware organization of a computer; Introduction to microprocessors, generations of microprocessors, Input/Output devices, Input/Output ports and connectors; Programming languages- machine language, assembly language, low level languages, high level languages, types of high level languages.

Unit II: System software

Translators- complier, interpreter, assembler; Macros, Loader, Linker, Relationship between Compiler, Interpreter, Loader and Linker; Operating System-fundamentals of operating system, functions of operating system, classification of operating systems, basic introduction to DOS, UNIX/LINUX OS, Windows XP.

Unit III: An overview of 'C'

History of C, importance of C, basic structure of C programs, executing a 'C' program, character set, 'C' tokens, keywords and identifiers, constants, variables and data types, declaration of variables, declaration of storage class, operators and expressions, managing I/O operations, decision making with IF statement, the if..else statement, nesting of if...else statement, switch statement, conditional statement, GOTO statement, the while statement, the do statement, the for statement and jumps in loops.

Unit IV: Array, structure and union in 'C'

Arrays: one-dimensional arrays, two-dimensional arrays, multi-dimensional arrays, dynamic arrays, character arrays and strings, user defined functions, structure-definition and initialization, declaring variables, accessing structure members; copying and comparing structure variables; operations on individual members; array of structure; structure within structure; unions, size of structure.

Unit V: Functions in 'C'

Basics of functions, built-in and user defined functions, using string, Math and other built-in functions, advantages of using functions, working of a function, declaring, defining and calling user defined functions-The return statement, call by value and call by reference, function as an argument, recursion, advantages and disadvantages of recursion.

Unit VI: Pointers in 'C'

Pointers- accessing the address of a variable, declaration and initialization of pointer variables, accessing a variable through its pointer; pointer Expressions; pointer and arrays, pointer and character strings; arrays of pointer; pointers as function arguments; functions returning pointers; pointers to functions.

RECOMMENDED BOOKS:

	1. Fundamental of Computers and Programming with C, by									
TEVT DOOLO	A.K.Sharma, Dhanpat Rai Publications, Delhi.									
IEAI BOOKS	2. Computer Networks (4th Edition), by Andrew S.									
	Tanenbaum.									
	3. Balagurusamy-Programming in ANSI C.									
REFERENCE BOOKS	1. ANSI C, by Dennis Ritchi.									
	2. Balagurusamy-Programming in ANSI 'C'.									

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for theory and 50 marks for practical.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.
SEMESTER-I

Fundamentals of Computers (with 'C') Lab

L	Ĩ	P
0	0	2

MODULE CODE	CSEN0102
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to components of computers, computer languages and to enhance skills of programming in 'C' language as mentioned below:

- 1. To acquire knowledge on a programming language.
- 2. To learn problem solving techniques.
- 3. To understand syntax and semantics of 'C' programming language.
- 4. To get familiar with program writing in C.
- 5. To enable learner to build logic for a given problem and finally develop programs.

- 1. Read, understand and trace the execution of programs in C language.
- 2. Ability to write code in C for a given algorithm.
- 3. Implement programs with pointers and arrays.
- 4. Perform pointer arithmetic, and use of pre-processor.
- 5. Write programs that perform operations using derived data types.

LIST OF EXPERIMENTS

1.	Write a program to calculate Simple Interest.
2.	Write a program to print largest of three numbers (if-then-else).
3.	Write a program to print whether given number is prime or not.
4.	Write basic programs illustrating Switch Case statement.
5.	Write a program to print largest of ten numbers (for statement).
6.	Write a program to implement matrix multiplication.
7.	Write a program to print Fibonacci Series.
8.	Write a program to print factorial of a number.
9.	Write a program to implement different string functions.
10.	Write a program to check whether a string is palindrome or not.
11.	Write a program to swap two numbers using call by reference and call by value.
12.	Write a program to create records of student (Name, Roll No., DOB and Marks) using struct and union
Fynerir	nants based on advanced tonics.
Experin	nents based on advanced topics.
13.	Write a program to determine the length of a character string using pointers.
14.	Write a C program to count the lines, words and characters in a given text.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks for practical.

SEMESTER-I

French Language – Part 1

L T P 2 0 0

MODULE CODE	LANF0101
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	50
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: All questions are compulsory. Each question may have multiple options and will cover all units.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to oral and written skills of expressing and exchanging information / interacting in French language and to enhance skills as mentioned below:

- 1. To prepare students to develop basic understanding on French language.
- 2. To acquire knowledge on French grammar.
- 3. To understand syntax and semantics of language.
- 4. To achieve an understanding on basic communication in French language.
- 5. To understand a dialogue between two native speakers and also take part in short, simple conversations using the skills acquired.

- 1. Able to understand the basic grammar of French language and differentiation of genders and objects.
- 2. Exposure to various syntax & communication methods with others.
- 3. Ability to read, write, speak & listen the basics of French language.
- 4. Able to understand the French history.

MODULE CONTENTS

<u>UNIT I:- BASIC COMMUNICATION</u> – This module will develops oral and written skills of understanding, expressing and exchanging information / interacting on the topics given below: -

- Establish contact with someone
- Introduce self and others
- · Greet, congratulate, and express condolences
- Spell
- Count
- Exchange simple information on self, preferences, feelings, plans, dreams
- Ask for information
- Tell the time
- Advice, order, suggest
- Buy, sell
- Make a reservation
- Order food or any article
- Invite, accept or refuse invitation
- Fix an appointment
- Locate a place
- Give directions
- Give chronological order of events
- Prepare an itinerary
- Ask for / Give explanations
- Describe a person, an object, an event, a place
- Describe the weather
- Compare

UNIT II: BASIC PHONETICS - This module will develop the ability in the students: -

• To pronounce words, say sentences, questions and give orders using the right accent and intonation.

• To express surprise, doubt, fear, displeasure and all positive or negative feelings using the right intonation

- To use 'liaison' and 'enchainment'
- To distinguish voiced and unvoiced consonants
- To distinguish between vowel sounds

UNIT III: BASIC GRAMMAR & FORMATION OF SENTENCES – This module will develops

the ability in the students to construct sentences and frame questions using: -

- Nouns gender and number
- Articles definite and indefinite, partitif, articles contractés
- Pronouns personal, relative (qui, que,où), y, en
- Verbs conjugation of regular and irregular verbs (affirmative and negative) in the following

tenses (indicative mood) – present, present continuous, simple future, immediate future, recent past, simple past, past continuous

- Verbs the imperative mood
- Adjectives numeric, qualitative, possessive, demonstrative, interrogative gender and number
- Adverbs simple adverbs of time, place, quantity
- Prepositions simple prepositions (place, time)
- Interrogation interrogative words, interrogative phrases, inversion

RECOMMENDED BOOKS:

	1. Nouveau Sans Frontières 1 by Philippe Dominique &			
TEXT BOOKS	Jacky Girardet			
	2. "CONNEXIONS-1" by Regine Merieux & Yves Loiseau			
	Published by Didier.			
REFERENCE BOOKS	3. Five in one Multilingual Glossary, published by			
	Saraswati House Pvt. Ltd. New Delhi 2011.

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to solid state physics, crystal geometries, quantum physics, nano-science, energy bands and electromagnetic theory to enhance skills in the field of electricity and magnetism and its applications as mentioned below:

- 1. To achieve knowledge and understanding on soli-state physics, various properties of crystals to model and solve wide range problems in science and engineering.
- 2. To get familiar with concepts of micro and nano scales of materials and develop ability to solve simple problems.
- 3. To understand the concepts of electricity and magnetism, distribution of solids according to band theory, free electrons, and applications of maxwell's equation in engineering problems.
- 4. To learn basic concepts of different types of magnetic properties of solids in scientific problems.
- 5. To acquire knowledge of crystal structure and assess their effectiveness in science and Technology.

- 1. Able to apply knowledge in developing advanced materials and devices.
- 2. Able to apply fundamental laws of electricity and magnetism in engineering.
- 3. Able to identify and solve crystal structure and semiconductor physics problems.
- 4. Able to solve applications based on Maxwell's equation
- 5. Able to apply knowledge to understand the concepts of quantum physics.
- 6. Able to identify and solve concepts related to nano particles.
- 7. Ability to create new problems and solve with the help of applications used.

COURSE CONTENT:

UNIT I: Crystal Structure

Space lattice, unit cell and translation vector, Miller indices, simple crystal structure. Laue's treatment to Bragg's law, powder method, point defects in solids- Schottky and Frenkel defects, Bonding in solidsionic and covalent bonds.

UNIT II: Quantum Physics

Difficulties with classical physics, introduction to quantum mechanics simple concepts, Black body radiations Discovery of Planck's constant, phase velocity and group velocity. Schrodinger wave equations-time dependent and time independent, Expectation value, Ehrnfest Theorem, particle in a one-dimensional box. Quantum Statistics, Bose-Einstein and Fermi-Dirac Statisticsz, Elementary ideas of quark, gluons and hadrons.

UNIT III: Nano-Science

Features of nano-systems, concept of quantum size effect, quantum dots and their applications.

Free Electron Theory: Elements of classical free electron theory and its limitations. Drude's theory of conduction, quantum theory of free electrons, Fermi level, density of states, Fermi-Dirac distribution function, Thermionic emission, Richardson's equation.

UNIT IV: Band Theory of Solids

Origin of energy bonds, Kronig-Penny model (qualitative) E-K diagrams, Brillouin Zones, Concept of effective mass and holes. Classification of solids into metals, semiconductors and insulators. Fermi energy and its variation with temperature. Hall Effect and its applications.

UNIT V: Green Energy

Introduction to Green energy, types of green energy, energy conversion mechanisms for solar energy, wind energy, ocean energy and geothermal energy.

UNIT VI: Electro Magnetic Theory

Gradient, Divergence, Curl, Gauss' law, Ampere's Law, Continuity equation, Maxwell,s equation (differential and integral forms), Significance of Maxwell's equations, Poynting Theorem, Electromagnetic wave propagation inn dielectrics and conductors.

RECOMMENDED BOOKS:

	1. Concepts of Modern Physics, Arthur Beiser (TMGH)				
TEXT BOOKS	2. Solid State Physics, S.O. Pillai (New Age Int. Ltd. Pub.)				
	3. Modern Physics for Engineers, S.P. Taneja (R. Chand)				
	4. Modern Engineering Physics, A.S. Vasudeva (S. Chand)				
	1. Introduction to Solid State Physics, Kittel (John Wiley)				
REFERENCEBOOKS	2. Quantum Mechanics, A. Ghatak				
	3. A Textbook of Engineering Physics, Avadhanulu and				
	Kshisagar (S. Chand)

Applied Physics Lab II

L	Т	Р
0	0	2

MODULE CODE	PHYS0104
CREDIT POINTS	1
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To achieve the practical knowledge of low and high resistance and resistance of galvanometer by different methods.
- 2. To be able to find characteristic of a solar cell, V-I of a p-n diode and to find the fill factor and e/m for electrons by helical method.
- 3. To get familiar with ionization potential of Argon/Mercury using a thyratron tube and find the radius of coil by Stewart and Gee's apparatus.
- 4. To have knowledge of hysteresis loss by tracing a B-H curve.
- 5. To obtain the Planck's constant, co-efficient of self-inductance by using a Rayleigh bridge, Hall Coefficient of semi-conductor.
- 6. To obtain band gap of intrinsic semi-conductor using four probe method.

- 1. Able to apply knowledge for finding the characteristics of solar cells and their applications.
- 2. Able to apply fundamental laws of superconductivity in engineering and technology.
- 3. Able to identify new problems and solve through different techniques.
- 4. Able to apply knowledge to understand the concepts of p-n junction diode.
- 5. Able to develop new experiment using advances technology.

COURSE CONTENT

14

	To find the four februaree of early footers offage.
15.	To find the resistance of a galvanometer by Thomson's constant deflection method using a post office hox
	a post office box.
16.	To find the value of high resistance by Substitution method.
17.	To find the value of high resistance by Leakage method.
18.	To study the characteristics of a solar cell and to find the fill factor.
19.	To find the value of e/m for electrons by Helical method.
20.	To find the ionisation potential of Argon/Mercury using a thyratron tube.
21.	To study the variation of magnetic field with distance and to find the radius of coil by
	Stewart and Gee's appratus.
22.	To study the characteristics of (Cu-Fe, Cu-Constantan) thermo couple.
23.	To find the value of Planck's constant by using a photo electric cell.
24.	To find the value of co-efficient of self-inductance by using a Rayleigh beidge.
25.	To find the value of Hall Co-efficient of semi-conductor.
26.	To study the V-I characteristics of a p-n diode.
14	

14. To find the band gap of intrinsic semi-conductor using four probe method.

15. To calculate the hysteresis loss by tracing a B-H curve.

To find the low resistance by carey- Foster's bridge

Note: At least 12 experiments out of the list must be done in the semester.

RECOMMENDED BOOKS

TEXT BOOKS	3. Advanced Practical Physics, B.L. Workshop and H.T. Flint (KPH)
REFRENCE BOOKS	 Practical Physics, S.L. Gupta & V. Kumar (Pragati Prakshan). Advanced Practical Physics Vol. I & II – Chauhan & Singh (Pragati Prakshan).

SEMESTER - II

Basics of Electronics

L T P 2 0 0

MODULE CODE	ECEN0104
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	50
END SEMESTER EXAM DURATION	1 hr 30 mins
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C Comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

The aim of teaching this subject is to impart knowledge primarily related to electronic circuitry so that learner may found it's applications in real life. Some of the objectives of the course are:

- 1. To acquire knowledge about semiconductor physics for intrinsic and extrinsic materials.
- 2. To get familiar with different type of electronic displays.
- 3. To acquire the knowledge of basic digital circuitry.
- 4. To analyze the performance of negative as well as positive feedback circuits.
- 5. To describe the scientific principles that apply to the basic flow of electricity and explain the function of various materials used as conducting, semiconducting, and insulating devices in the construction of standard electronic circuits.

- 1. Able to appreciate the significance of electronics in different applications.
- 2. Able to apply method and appropriate technology to the study of physical science.
- 3. Able to compile the different building blocks in digital electronics using logic gates and implement simple logic function using basic universal gates.
- 4. Acquiring problem solving skills.
- 5. Get familiar with working of various components of a circuit.
- 6. Get familiar with measurement devices for example CRO, multi meter.

MODULE CONTENTS:

Unit I: Semiconductor Physics

Basic concepts, Intrinsic and extrinsic semiconductors, diffusion and drift currents, p-n junction under open- circuit, reverse bias and forward-bias conditions, p-n junction in the breakdown region, Ideal diode.

Unit II: Amplifiers

Introduction of different types of amplifiers and their characteristics, Principle of amplification, concept of feedback in amplifiers, frequency response of RC coupled amplifiers.

Unit III: Oscillators

Criteria for oscillations, study of different types of oscillators.

Unit IV: Digital Electronics

Binary, Octal and Hexadecimal number system and conversions, Boolean Algebra, Truth tables of logic gates (AND, OR, NOT) NAND, NOR as universal gates.

Unit V: Electronics Instruments

Role, importance and applications of general purpose test instruments viz Multimeter Digital and Analog, Cathode Ray Oscilloscope (CRO), and Function/Signal Generator

<u>Unit VI: Display</u>

Seven segment display, Fourteen segment display, and Dot matrix display.

LED Display: Introduction, Construction, and Advantage of LEDs in electronics display. LCD Display: Introduction, Types of LCD display- Dynamic scattering and field effect type; Types of liquid crystal cells: Transmitting type and reflective type, advantage and disadvantage of LCD display.

RECOMMENDED BOOKS:

TEXT BOOKS	 Electronic Devices & Circuits - Boylstad & Nashelsky. J.S Katre "Basic Electronics" Tech Max Publications J.B Gupta, "Basic Electronics" S K kataria and sons
REFERENCEBOOKS	 Electrical and Electronic Technology (8th Edition): Hughes, Pearson. Cooper and Helfrick, "Modern Electronic Instrumentation and Measuring Techniques", 4th print Prentice Hall of India, New Delhi (1996). Cooper and Helfrick, "Modern Electronic Instrumentation and Measuring Techniques", 4th print Prentice Hall of India, New Delhi (1996).

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 75 marks.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark

SEMESTER - II

Basics of Electronics Lab

L T P 0 0 2

MODULE CODE	ECEN0105
CREDIT POINTS	1
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

- 1. To understand the practical aspects of basic electronics theory.
- 2. To Design and construct simple electronic circuits to accomplish a specific function
- 3. To understand the working of CRO and other measuring instruments.
- 4. To understand input and output characteristics of Bi-polar junction transistor.
- 5. To get familiar with ideal and practical characteristics of IC 741.
- 6. To provide experimental validation of the elementary analogue circuitry using analogue and digital testers.
- 7. To learn operation of electronic displays.
- 8. To understand their capabilities and limitations and make decisions regarding their best utilization in a specific situation.

- 1 Identify the basic tools and test equipment used to construct, troubleshoot, and maintain standard electronic circuits and systems.
- 2 Able to verify the working of diodes, transistors and their applications.
- 3 Able to design various basic circuits of digital electronics using simple gates and capable to work on IC 741.
- 4 Get familiar with the operation and applications of cathode ray oscilloscope.
- 5 To generate signals using function generator.
- 6 Build a common emitter/base/collector amplifier and measure its voltage gain.
- 7 Explore the operation and advantages of operational amplifiers.
- 8 Exploring the circuitry which converts an analog signal to digital signal.

LIST OF EXPERIMENTS:

1.	To get familiar with the working knowledge of the following instruments : a) Cathode ray oscilloscope (CRO) b) Multi meter (Analog and Digital) c) Function generator.
2.	a) Plot the forward and reverse V-I characteristics of P-N junction diode.b) Study of Zener diode in breakdown region.
3.	To plot and study the input and output characteristics of BJT in common-emitter configuration
4.	Verification of truth tables of logic gates (OR, AND, NOT, NAND, NOR).
5.	To get familiar with the working and use of seven-segment display.
6.	Verification of truth tables of flip-flops (S-R,. J-K).
7.	To measure phase difference between two waveforms using CRO.
8.	To find frequency response of a given amplifier and calculate its bandwidth.
9.	To get familiar with pin-configuration of typical op-amp (741)and its use as : a) Inverting amplifier b) Non-inverting amplifier c) Summing amplifier d) Difference amplifier
10.	Use of op-amp as a) Integrator b) Differentiator
Experi	ments based on advanced topics:
11.	To assemble and test 5V/9 V DC regulated power supply and find its line-regulation and load-regulation
12.	To assemble Wein Bridge oscillator circuit and calculation of oscillation frequency and its verification from the observed output.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks for practical.

INSTRUCTIONS: The Question paper will comprise of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B and Section C comprise of short answer type and Long answer type questions and will have internal choices.

OBJECTIVES:

- 1. To have an understanding of fundamental concepts of thermodynamics system and its properties.
- 2. To develop an ability to identify, formulate, and solve engineering problems.
- 3. To achieve an ability to use the techniques, skill, and modern engineering tools necessary for engineering practice.
- 4. An ability to work professionally in both thermal and mechanical systems areas.
- 5. Apply their mechanical engineering education to address the full range of technical and societal problems with creativity, imagination, confidence and responsibility.
- 6. To understand multiple integrals and their applications in engineering problems.

- 1. Able to apply knowledge of mathematics, science, and engineering.
- 2. An ability to design and conduct experiments, as well as to analyze and interpret data.
- 3. Enhance the knowledge about how to identify, formulate, and solve engineering problems.
- 4. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- 5. Able to design and conduct experiments; analyze results.
- 6. Recognize and understand contemporary issues and the role of professionals in global society.

COURSE CONTENT:

Unit I: Introduction to Machine tools

Introduction to Machine Tool to Commonly used Machine Tools in a Workshop: - Lathe, Shaper, Planer, Milling, Drilling, Slotter. Introduction to Metal Cutting.

Unit II: Basic concept of thermodynamics

Basic concept of thermodynamics, Introduction, States, Work, Heat, Temperature, Zeroth, 1st, 2nd and 3rd law of thermodynamics, Concept of internal energy, enthalpy and entropy. Problems Properties of Steam & Steam Generator Formation of steam at constant pressure, Thermodynamic properties of Steam, Use of steam tables, Measurement of dryness fraction by throttling calorimeter.

Unit III : Refrigeration & Air-conditioning

Introduction to refrigeration and air -conditioning, Rating of refrigeration machines, Coefficient of performance, Simple refrigeration vapour compression cycle, Psychrometric charts and its use, Human comforts.

Unit IV: Hydraulic Turbines & Pumps

Introduction, Classification, Construction details and working of Pelton, Francis and Kaplan turbines, Specific speed and selection of turbines, Classification of water pumps and their working.

Unit V: Power Transmission Methods and Devices

Introduction to Power transmission, Belt, Rope, Chain and Gear drive. Types and functioning of clutches. Introduction to Manufacturing Systems, Fundamentals of Numerical Control (NC), Advantage of NC systems, Classifications of NC, Comparison of NC and CNC.

Unit VI : Stresses and Strains

Introduction, Concept & types of Stresses and strains, Poison's ratio, stresses and strains in simple and compound bars under axial, flexure & torsional loading, Stress- strain diagrams, Hooks law, Elastic constants & their relationships.

RECOMMENDED BOOKS:

OBJECTIVES:

- 1. To learn effective engineering communication.
- 2. Ability to work in teams on multidisciplinary projects in industry and research organizations.
- 3. Develop awareness of the ethical, professional and environmental implications of work in a global and societal context.
- 4. To learn modern engineering tools, techniques, skills and contemporary engineering practice, necessary for engineering work.
- 5. Have an understanding to solve mechanical engineering problems based on data interpretation, design, experiment and analysis of results.

- 1. Able to apply knowledge of mathematics (including differential equations and statistics), physical and life sciences, and engineering to carry out analysis and design to solve problems at the interface of engineering and biology.
- 2. Exposure to design and conduct experiments, as well as to measure, analyze and interpret data from living systems.
- 3. Ability to design a system, component, or process to meet desired needs, including systems that involve the interaction between living and non-living materials.
- 4. Ability to identify, formulate, and adapt engineering solutions to unmet biological needs.
- 5. Ability to create the techniques, skills, and modern engineering tools necessary for engineering practice, including the ability to model and analyze biological systems as engineering systems.

LIST OF EXPERIMENTS

1.	To study the Cochran and Babcock & Wilcox boilers.
2.	To study the working and function of mountings and accessories in boilers.
3.	To study Two-Stroke & Four-Stroke Diesel Engines.
4.	To Study Two-Stroke & Four-Stroke Petrol Engines.
5.	To study the vapour compression Refrigeration System and determination of its C.O.P.
6.	To study the functioning of Window Room Air Conditioner.
7.	To study the constructional features and working of Pelton Wheel Turbine, Francis Turbine and Kaplan Turbine.
9.	To calculate the Mechanical Advantage, Velocity Ratio and Efficiency of Single Start, Double
10.	Start and Triple Start Worm Wheel.
11.	To calculate Mechanical Advantage, Velocity Ratio and Efficiency of Single Purchase and Double purchase winch crab and plot graphs.

RECOMMENDED BOOKS:

TEXT BOOK	 Elements of Mechanical Engineering – R.K.Rajput Lakmi Pub., Delhi. Elements of Mechanical Engineering – D.S.Kumar, S.K. Kataria and Sons.

OBJECTIVES:

- 1. To practice workshop safety rules effectively.
- 2. To acquire knowledge and use simple hand tools.
- 3. To acquire knowledge and use simple measuring and gauging instruments.
- 4. To operate simple drilling machines for producing small holes.
- 5. To understand about various machine tools for producing simple metal components and articles.

- 1. Able to understand applications of hand tools and power tools.
- 2. Able to get familiar with operations of machine tools.
- 3. Ability to select the appropriate tools required for specific operation.
- 4. Exposure to safety measures required to be taken while using the tools.
- 5. Ability to acquire knowledge and practice on foundry, forging and welding.

COURSE CONTENT:

1	To study different types of measuring tools used in metrology and determine least counts of vernier calipers, micrometers and vernier height gauges.
2	To study different types of machine tools (lathe, shape or planer of slotter, milling, drilling machines).
3	To prepare a job on a lathe involving facing, outside turning, taper turning, step turning, radius making and parting-off.
4	To study different types of fitting tools and marking tools used in fitting practice.
5	To prepare lay out on a metal sheet by making and prepare rectangular tray pipe shaped components e.g. funnel.
6	To prepare joints for welding suitable for bull welding and lap welding.
7	To perform pipe welding.
8	To study various types of carpentry tools and prepare simple types of at least two wooden joints.
9	To prepare simple engineering components/shapes by forging.
10	To prepare mold and core assembly to put metal in the mold and fettle the casting.

RECOMMENDED BOOKS:

	1. Workshop Technology Vol. 1 and 2 BY
TEXT BOOKS	RAGHUVANSHI, Title: B.S. Dhanpat Rai & Sons.Workshop practices, Author HS BAWA, TITLE: Tata McGraw-Hill.

SEMESTER - II

Basics of Civil Engineering

L T P 2 0 0

MODULE CODE	CIVL0101
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	50
END SEMESTER EXAM DURATION	1.30 Hrs
LAST REVISION DATE	

INSTRUCTIONS: The Question paper will consist of seven questions distributed over three sections A, B and C. Section A comprises of very short answer type questions and is compulsory. Section B & C comprise of short answers type and long answer type questions. These sections will have internal choice.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to basic knowledge of different sections of civil engineering as mentioned below:

- 1. To achieve knowledge and understanding about engineering aspects related to buildings.
- 2. To get familiar with different building materials and their properties.
- 3. To understand importance of surveying and the transportation systems.
- 4. To learn basic concepts related to water supply and sewage disposal.
- 5. To understand the fundamental concepts of geotechnical engineering and properties of soil.

- 1. Able to know about basic civil engineering terms and their applications.
- 2. Able to learn about the basic building material used in construction.
- 3. Able to understand about importance of surveying in civil engineering.
- 4. Able to know about soil behaviour and soil properties in different conditions.
- 5. Able to learn about water supply system and different layout of water distribution systems.

MODULE CONTENT:

UNIT -I : Building Materials

Introduction of Civil Engineering materials: Bricks– composition, classifications, properties and uses. Stone – classification of rocks, quarrying, dressing properties and uses. Timber – properties, uses. Cement – grades, types, properties, uses. Steel – mild steel, medium steel, hard steel, their properties, uses. Concrete – grade designation, properties and uses.

UNIT-II: Building Components

Building – selection of site, classification, components. Foundations –functions, classification bearing capacity. Flooring – requirements, selection, types. Roof – types and requirements.

UNIT-III: Surveying

Introduction, Principles of surveying, use and adjustment of various instruments employed in chain survey, compass surveying and plane table surveying. Definition and working principles of a levelling instruments, Use and adjustment of dumpy and tilting levels, Establishment of Bench Marks by levelling.

UNIT-IV: Transportation

Highway –classification, cross section and components of roads. Railway – cross section and components of permanent way and their functions. Waterway – docks and harbour, classifications, components. Bridge – introduction and components of bridge.

UNIT-V: Water Supply And Sewage Disposal

Water supply – objective, quantity of water, sources, standards of drinking water, distribution system. Sewage – classification, technical terms, septic tank, components and functions.

UNIT-VI: Geotechnical Engineering

Soil mechanics- Introduction, formation, composition, classification and properties of soil.

RECOMMENDED BOOKS:

	1. Basics of Civil Engineering, Raju .K.V.B, Ravichandran .P.T,				
TEXT BOOKS	Ayyappa Publications.				
	2. Engineering Material's, Rangwala .S.C Charotar Publishing				
	House.				
	1. Basics of Civil Engineering, Shrikrishna, Kiran M. Tajne,				
REFERENCE BOOKS	Shrikrishna A Dhale. S.Chand Publication				
	2. Basic Civil Engineering, Satheesh Gopi. Publisher: Pearson				
	India				

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory and 50 marks for practical.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	5
2.	Sessional Test	2	15
3.	Group Discussion	4	5
4.	End Semester Exam	1	50

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - II

Basics of Civil Engineering Lab

L T P 0 0 2

MODULE CODE	CIVL0102
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects of Civil Engineering field to the students of all branches of Engineering.

- 1. To study the practical experiments in chaining, compass.
- 2. To study the basics properties of cement.
- 3. To study the practical application of theodolite.
- 4. To study the properties of soil.
- 5. To give experience in handling surveying equipments.

- 1. Able to determine linear measurement like horizontal distance.
- 2. Ability to determine properties of cement experimentally.
- 3. Ability to determine different properties of soil experimentally.
- 4. Ability to determine C B R value of soil.
- 5. Ability to handle different surveying instruments.

LIST OF EXPERIMENTS

1.	Linear measurement using tape, chain.
2.	Chain survey – Determination of area by perpendicular offset.
3.	Theodolite- Measurement of horizontal and vertical angles by Vernier Theodolite.
4.	To determine the normal consistency of cement paste.
5.	To determine soundness of given cement by Le-Chatelier method
6.	To determine initial and final setting time of cement
7.	To determine the fineness of cement.
8.	To determine water content of soil mass.
9.	To determine Atterberg Limit of soil.
10.	C B R Value test.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	а	b	с	d	e	f	g	h	Ι	j	k
Course Learning		1,2,	1,2,3,		1,2,3						
Outcomes		3	4		,4						

EVALUATION

- Approved refinement decisions due for implementation,

- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - II

Applied Mathematics-II

L T P 4 1 0

MODULE CODE	
MODULE CODE	MATHUTI6
CREDIT POINTS	4.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

- 1. To achieve knowledge and understanding of differential equations, their various properties and capabilities to model and solve wide range of problems in science and engineering.
- 2. To get familiar with concepts of Laplace transforms and develop ability to solve simple and complex problems.
- 3. To understand Fourier series and their applications in engineering problems.
- 4. To learn basic concepts of Fourier Transforms and its application in scientific problems.
- 5. To acquire knowledge of complex functions and assess their effectiveness in science and Technology.

- 1. Able to understand differential equations and their capability to solve problems.
- 2. Exposure to Laplace transforms and their compatibilities.
- 3. Enhance the knowledge regarding Fourier series and their applications
- 4. Able to understand Fourier Transforms and its application.
- 5. Ability to acquire knowledge of complex functions and assess their effectiveness in science and Technology.

MODULE CONTENT:

UNIT-I: Ordinary Differential Equations & its Applications

Exact differential equations. Equations reducible to exact differential equations. Applications of Differential equations of first order & first degree to simple electric circuits, Newton's law of cooling, heat flow and orthogonal trajectories.

UNIT-II: Linear Differential Equations.

Linear differential equations of second and higher order. Complete solution, complementary function and particular integral, method of variation of parameters to find particular Integral, Cauchy's and Legendre's linear equations, simultaneous linear equations with constant coefficient. Applications of linear differential equations to simple pendulum, oscillatory electric circuits.

UNIT-III: Partial Differential Equations and Its Applications

Formation of partial differential equations, Lagrange's linear partial differential equation, First orders non-linear partial differential equation, Char pit's method. Method of separation of variables and its applications to wave equation and one dimensional heat equation, two dimensional heat flow, steady state solutions only.

UNIT-IV: Laplace Transforms and its Applications

Laplace transforms of elementary functions, properties of Laplace transforms, existence conditions, transforms of derivatives, transforms of integrals, multiplication by t^n , division by t. Evaluation of integrals by Laplace transforms. Laplace transform of Unit step function, unit impulse function and periodic function. Inverse transforms, convolution theorem, application to linear differential equations and simultaneous linear differential equations with constant coefficients.

Unit –V: Fourier Series and Fourier Transforms

Euler's formulae, conditions for a Fourier expansion, change of interval, Fourier expansion of odd and even functions, Fourier expansion of square wave, rectangular wave, saw-toothed wave, half and full rectified wave, half range sine and cosine series.

Fourier integrals, Fourier transforms, Shifting theorem (both on time and frequency axes), Fourier transforms of derivatives, Fourier transforms of integrals, Convolution theorem.

UNIT-VI: Functions of Complex Variable

Definition, Exponential function, Trigonometric and Hyperbolic functions, Logarithmic functions. Limit and Continuity of a function, Differentiability and Analyticity, Cauchy-Riemann equations, necessary and sufficient conditions for a function to be analytic, polar form of the Cauchy-Riemann equations. Harmonic functions, application to flow problems. Integration of complex functions. Cauchy-Integral theorem and formula.

MODULE CODE	MATH0117
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to develop understanding of different methods related to error, area numerically, using different techniques to enhance skills of numerical methods as mentioned below:

- 1. To achieve knowledge and understanding of different types of error, interpolation, extrapolation and capabilities to solve by different methods with wide range of problems in science and engineering.
- 2. To get familiar with concepts of nonlinear equations and develop ability to solve simple Complex problems.
- 3. To understand direct and indirect methods solve simultaneous linear equations and their applications in engineering problems.
- 4. To learn basic concepts of area solve by integration and its application in realistic decision making.
- 5. To acquire knowledge of ordinary and partial differential equations solve by different methods and assess their effectiveness in problem solving.

- 1. Able to understand the evolution of techniques and basic terminology.
- 2. Exposure to various methods and techniques and their compatibilities.
- 3. Enhance the knowledge regarding different types of error, linear, non-linear and ordinary and partial differential equations.
- 4. Able to understand the basic techniques and start to implement in real life.
- 5. Ability to find the largest Eigen values and corresponding Eigen vector.

MODULE CONTENT:

Unit I: Errors in Numerical Calculation

Introduction, Numbers and their accuracy, Absolute, relative and Percentage errors and their analysis, General error formula.

Interpolation and Curve Fitting: Newton's forward and backward; Gauss forward and backward; central difference interpolation formulae; Lagrange's and Newton divided difference interpolation formula, Interpolating with a cubic spline, Bezier curves and B-spline curves, Curve fitting by Least squares approximations.

Unit II: Nonlinear equations

Bisection method, Regula False method, Secant method, Iteration Method, Newton's Raphson method, Giraffe's methods, Muller's method.

Unit III: Simultaneous linear equations

Gauss Elimination method, Gauss-Jordan method, LU- decomposition Method, Jacobi's method, Gauss- Seidal method, Relaxation method.

Unit IV: Numerical differentiation and Integration

Derivatives from differences tables, higher order derivatives, Newton-cotes integration formula, Trapezoidal rule, Simpson's rules, Boole's rule and Weddle's rule, Romberg's Integration.

Unit V: Numerical solution of ordinary differential equations

Taylor series methods, Euler and modified Euler method, Runge-Kutta methods, Milne's method, Adams-Moulton method.

Unit VI: Numerical solution of partial differential equations

Finite difference approximation of partial derivatives, solution of Laplace equation (standard 5-point formula only), one dimensional heat equation (Schmidt method, Crank-Nicolson method, Dufort and Frankel method).

Eigen Value Problems: Power method, Jacobi, Given's and Householder's methods for symmetric matrices.

RECOMMENDED BOOKS:

	1. Applied Numerical analysis: Curtis F Gerald and Patrick,				
	G Wheatley-Pearson Education.				
TEXT BOOKS	2. Numerical Methods: Fairs & Burden, Brooks Cole, 2001.				
	3. Numerical Methods in Engineering and Science, B S				
	Grewal, Khanna Publishers.				
	1. Numerical Methods for Scientific and Engineering				
	computations, M.K. Jain, S.R.K. Iyenger and R.K. Jain-				
REFERENCE BOOKS	Wiley Eastern Ltd.				
	2. Numerical Methods for engineers, Steven C. Chapra,				
	Raymond P. Can ale, McGraw Hill.

SEMESTER - II

Value Education

L T P 2 0 0

MODULE CODE	VALU1019
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: All questions are compulsory. Each question may have multiple options and will cover all units.

OBJECTIVES:

The Purpose of Value Education is specifying the present deterioration in the value system in the fast changing world trends and to develop understanding of moral values in different aspects of life for inculcating the skills as mentioned below:

- 1. To prepare students to develop basic understanding of Value Education.
- 2. To acquire knowledge on Value Education.
- 3. To understand the ethics, character building, leadership & goal setting.
- 4. To understand the success & personal growth.
- 5. To support the women empowerment & environmental awareness.

- 1. Able to understand the Importance of Values in Life what is a Value system?
- 2. Exposure to various principles, concepts, types, advantages and disadvantages of value education.
- 3. Ability to understand the life style management & self esteem.
- 4. To behave morally in society.

MODULE CONTENTS:

UNIT 1: VALUE EDUCATION
Definition, Concept and Classification of values
• The need for value education
Pedagogy of Values
Challenges of Value Adoption
Life Style Management
UNIT 2: VALUE & PERSONAL DEVELOPMENT
• The principles of integrity
Character Development
• Values in everyday life
Values, Virtues, Powers & Qualities
Successful Personality
UNIT 3: VALUES IN SOCIETY
Character Building
Positive thinking & Emotional Maturity
Women Empowerment
Overcoming Addiction
Environmental Awareness
<u>UNIT 4: PERSONAL PROGRESS & FIELD STUDY</u>
Personal progress manual
• Field Project

RECOMMENDED BOOKS:

TEXT BOOKS	 Seven Habits of Highly Effective People, Covey Stephen, Free Press, United States, 1989 You Can Win, Khera Shiv, Macmillan India Limited, New Delhi, 1998
REFERENCE BOOKS	Mani Jacob, ed., (2002). Resource for Value Education, New Delhi: Institute of Value Education.

SEMESTER - II

PC Lab

L T P 0 0 2

MODULE CODE	CSEN1107
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

The main objective of the lab is to provide the students the knowledge of computer hardware, the processors, memories, motherboards, different add-on cards, and other peripherals like printers, plotters and the scanners. The students are trained for the assembly and disassembly of PCs. Another important objective is to impart knowledge about the troubleshooting and fault finding the computers and the peripherals.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Learn about different hardware components of a computer and their troubleshooting.
- 2. Understand different peripherals, their performance and cost characteristics
- 3. Understand installation of various operating systems, their capabilities
- 4. Learn commonly used PC software like MS Word, Excel and PowerPoint.

LIST OF EXPERIMENTS

PC Software: Application of basics of MS Word 2013, MS Excel 2013, MS Power Point 2013, MS Access 2013.

1.	To prepare the Your Bio Data using MS Word.
2.	To prepare the list of marks obtained by students in different subjects and show with the help of chart/graph the average, min and max marks in each subject.
3.	Prepare a presentation explaining the facilities/infrastructure available in your department.
4.	Create a database of books in the library on a mini scale w.r.t. Computers and manipulate the database using different forms and reports.

PC Hardware:

1.	To check and measure various supply voltages of PC.
2.	To make the comparative study of various motherboards.
3.	To make the comparative study of various processors.
4.	To study various cables used in computer communication.
5.	To study various connections and ports used in computer communication.
6.	To study various cards used in a Computer System.
7.	To remove, study and replace CD-Rom, Harddisk.
8.	To observe various cables and connectors used in networking.
9.	To assemble a PC.
10.	Troubleshooting exercises related to various components of computer like monitor, drives, memory and printers etc.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark

French Language – Part 2

Pre-requisite - French Language - Part 1

MODULE CODE	LANF0104
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75 (Written – 50, Oral – 25)
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: All questions are compulsory. Each question may have multiple options and will cover all units.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to oral and written skills of expressing and exchanging information / interacting in French language and to enhance skills as mentioned below:

- 1. To prepare students to develop advance understanding on French language.
- 2. To acquire the command over the French grammar.
- 3. To read and write short, simple texts.
- 4. To enable learner to build logic in French language.
- 5. To make students aware of the French culture, customs & traditions.

- 1. Able to understand the advance grammar of French language and differentiation of genders and objects.
- 2. Exposure to various syntax & communication methods with others.
- 3. Ability to read, write, speak & listen the advance of French language.
- 4. Able to understand the French history.

MODULE CONTENTS

UNIT I: MODERATE COMMUNICATION - This module will sharpen the communicative skills already acquired in the PART 1 - BASIC COMMUNICATION and further builds on them. It develops oral and written skills of understanding, expressing and exchanging information / interacting on the topics given below: -• Describe in detail people, relationships, events, places, cultures of countries • Compare people, relationships, events, places, cultures and the changes that they have undergone • Apply for a job • Exchange personal and professional information • Express opinion on people, places, events encountered in one's personal life and on press articles, television programmes, multimedia, films, and books • Argue, justify and substantiate a point of view • Describe hypothetical or imaginary situations • Express plans, dreams, aspirations of the future • Paragraph writing Professional communication UNIT II: MODERATE PHONETICS - This module will re-enforces all the notions introduced in the PART 1- BASIC PHONETICS. UNIT III: MODERATE GRAMMAR – This module will sharpen the concepts introduced in the PART 1 - BASIC GRAMMAR & FORMATION OF SENTENCES and further develops the following linguistic skills: -• Pronouns – relative (don't), possessive, indefinite, demonstrative and the use of double pronouns • Verbs - conjugation of regular and irregular verbs (affirmative and negative) in the following tenses (indicative mood) – past perfect, future perfect • Verbs – the subjunctive mood (past and present) • Verbs – conditional (past and present) and gerund forms, • Adverbs of time, place, quantity and indefinite adverbs • Direct/indirect speech • Comparative and superlative structures • Active/passive structures • Multiple clause sentences – independent clauses joined by co-ordinating conjunctions, dependant clause (subordinate clause) • Phrases to express cause, consequence, and objective **RECOMMENDED BOOKS:**

TEXT BOOKS	 Nouveau Sans Frontières 1 by Philippe Dominique & Jacky Girardet "CONNEXIONS-1" by Regine Merieux & Yves Loiseau Published by Didier.
REFERENCE BOOKS	Five in one Multilingual Glossary, published by Saraswati House Pvt. Ltd. New Delhi 2011.

- 4. Able to understand the German history.

MODULE CONTENTS

UNIT I: MODERATE COMMUNICATION - This module will sharpen the communicative skills already acquired in the PART 1 - BASIC COMMUNICATION and further builds on them. It develops oral and written skills of understanding, expressing and exchanging information / interacting on the topics given below: -• Describe in detail people, relationships, events, places, cultures of countries • Compare people, relationships, events, places, cultures and the changes that they have undergone • Apply for a job • Exchange personal and professional information • Express opinion on people, places, events encountered in one's personal life and on press articles, television programmes, multimedia, films, and books • Argue, justify and substantiate a point of view • Describe hypothetical or imaginary situations • Express plans, dreams, aspirations of the future • Paragraph writing Professional communication UNIT II: MODERATE PHONETICS – This module will re-enforces all the notions introduced in the PART 1- BASIC PHONETICS. UNIT III: MODERATE GRAMMAR – This module will sharpen the concepts introduced in the PART 1 - BASIC GRAMMAR & FORMATION OF SENTENCES and further develops the following linguistic skills: -• Pronouns – relative (don't), possessive, indefinite, demonstrative and the use of double pronouns • Verbs – conjugation of regular and irregular verbs (affirmative and negative) in the following tenses (indicative mood) – past perfect, future perfect • Verbs – the subjunctive mood (past and present) • Verbs – conditional (past and present) and gerund forms, • Adverbs of time, place, quantity and indefinite adverbs • Direct/indirect speech • Comparative and superlative structures • Active/passive structures • Multiple clause sentences – independent clauses joined by co-ordinating conjunctions, dependant clause (subordinate clause) • Phrases to express cause, consequence, and objective **RECOMMENDED BOOKS:** 1. Tangram, Kursbuch und Arbeitsbuch, 1A, 1B & 2A, Max Hueber Verlag **TEXT BOOKS** 2. Tangram, Kursbuch und Arbeitsbuch, 2B, 3A & 3B, Max Hueber Verlag em Abschlusskurs, Kursbuch und Arbeitsbuch, Max Hueber **REFERENCE BOOKS** Verlag

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning										12	34
Outcomes										1,2	Э,т

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	1	10
2.	Sessional Test	2	15
3.	End Semester Written Exam	1	50
4.	End Semester Oral Exam	1	25

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4
Class Test	Х	Х	Х

Assignment			Х	Х

EVALUATION

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and

• Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - II

L Р Т 2 0 0

Spanish Language – Part 2 Pre-requisite - Spanish Language - Part 1

MODULE CODE	LANS0106
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75 (Written – 50, Oral – 25)
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: All questions are compulsory. Each question may have multiple options and will cover all

units.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to oral and written skills of expressing and exchanging information / interacting in Spanish language and to enhance skills as mentioned below:

- 1. To prepare students to develop advance understanding on Spanish language.
- 2. To acquire the command over the Spanish grammar.
- 3. To read and write short, simple texts.
- 4. To enable learner to build logic in Spanish language.
- 5. To make students aware of the Spanish culture, customs & traditions.

- 1. Able to understand the advance grammar of Spanish language and differentiation of genders and objects.
- 2. Exposure to various syntax & communication methods with others.
- 3. Ability to read, write, speak & listen the advance of Spanish language.
- 4. Able to understand the Spanish history.

MODULE CONTENTS

UNIT I: MODERATE COMMUNICATION - This module will sharpen the communicative skills already acquired in the PART 1 - BASIC COMMUNICATION and further builds on them. It develops oral and written skills of understanding, expressing and exchanging information / interacting on the topics given below: -• Describe in detail people, relationships, events, places, cultures of countries • Compare people, relationships, events, places, cultures and the changes that they have undergone • Apply for a job • Exchange personal and professional information • Express opinion on people, places, events encountered in one's personal life and on press articles, television programmes, multimedia, films, and books • Argue, justify and substantiate a point of view • Describe hypothetical or imaginary situations • Express plans, dreams, aspirations of the future • Paragraph writing Professional communication UNIT II: MODERATE PHONETICS – This module will re-enforces all the notions introduced in the **PART 1- BASIC PHONETICS.** UNIT III: MODERATE GRAMMAR - This module will sharpen the concepts introduced in the PART 1 - BASIC GRAMMAR & FORMATION OF SENTENCES and further develops the following linguistic skills: -• Pronouns – relative (don't), possessive, indefinite, demonstrative and the use of double pronouns • Verbs – conjugation of regular and irregular verbs (affirmative and negative) in the following tenses (indicative mood) – past perfect, future perfect • Verbs – the subjunctive mood (past and present) • Verbs – conditional (past and present) and gerund forms, • Adverbs of time, place, quantity and indefinite adverbs • Direct/indirect speech • Comparative and superlative structures • Active/passive structures • Multiple clause sentences – independent clauses joined by co-ordinating conjunctions, dependent

clause (subordinate clause)

• Phrases to express cause, consequence, and objective

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how to design, write, and analyse the performance of various data structures. It will also enable students to learn advanced data structure such as Tree, Graph, hash tables.

- 1. To teach the behavior of basic data structure (list, stack, queue, hash table, trees, and graph).
- 2. To understand and analyse elementary algorithms: sorting, searching.
- 3. To make students familiar with basic techniques of algorithm analysis including time and space complexity.
- 4. To teach the implementation of linked data structures such as linked lists and binary trees.
- 5. To make students familiar with advanced data structures such as balanced search trees, hash tables, priority queues and the disjoint set union/find data structure.
- 6. To make students familiar with some graph algorithms such as shortest path and minimum spanning tree.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Students will be able to characterize the space and time complexity of algorithms.
- 2. Students will understand different data structures including stack, queue, linked list, tree, heap, graph, and hash table.
- 3. Students will be able to implement insert, retrieve, and delete operations and traversals of binary search trees.
- 4. Ability to understand traversals and algorithms on graphs.
- 5. Student will be able to implement hash tables along with insert and retrieve operations.

MODULE CONTENT:

UNIT-I: Overview of 'C', Data structures and Algorithms

Introduction, Flow of Control, and Input output functions, Arrays and Structures, Function. Data structures and Algorithms: an overview: concept of data structure, choice of right data structures, types of data structures, basic terminology Algorithms, how to design and develop an algorithm: stepwise refinement, use of accumulators and counters; algorithm analysis, complexity of algorithms Big-oh notation.

UNIT-II: Arrays: Searching and Sorting

Introduction, One Dimensional Arrays, operations defined: traversal, selection, searching, insertion, deletion, and sorting. Multidimensional arrays, address calculation of a location in arrays. Searching: linear search, binary search; Sorting: selection sort, bubble sort, insertion sort, merge sort, quick sort, shell sort, quick Sort, Heap sort.

UNIT-III: Stacks and Queues

Stacks, array representation of stack. Applications of stacks: Infix, postfix, prefix representation, Conversions. Queues, Circular queues, array representation of Queues, Deques, priority queues, Applications of Queues.

UNIT-IV: Pointers and Linked list

Pointer variables, Pointer and arrays, array of pointers, Dynamic allocation. Linked Lists: Concept of a linked list, Circular linked list, doubly linked list, operations on linked lists. Concepts of header linked lists. Applications of linked lists, linked stacks, linked Queues.

UNIT-V: Trees

Introduction to trees, Basic Terminology of trees, binary trees, Properties of binary trees, traversal of trees: pre-order, post-order, In-order traversal, types of binary trees, Binary Search Tree, threaded binary trees, B Trees,m-Way Tree, B+Tree,AVL trees, Application of trees.

UNIT-VI: Graphs and Hashing

Definition of Undirected and Directed Graphs, Basic terminology of Graphs, the Array based implementation of graphs, Adjacency matrix, path-matrix implementation, The Linked List representation of graphs, Graph Traversal–Breadth-first-Traversal, Depth-first-Traversal Hashing: Search efficiency in lists and skip lists, hashing as a search structure, hash table, collision avoidance, linear open addressing and chains

RECOMMENDED BOOKS:

OBJECTIVES:

- 1. To teach the behavior of basic data structure (list, stack, queue, hash table, trees, and graph).
- 2. To understand and analyse elementary algorithms: sorting, searching.
- 3. To make students familiar with basic techniques of algorithm analysis including time and space complexity.
- 4. To teach the implementation of linked data structures such as linked lists and binary trees.
- 5. To make students familiar with advanced data structures such as balanced search trees, hash tables, priority queues and the disjoint set union/find data structure.
- 6. To make students familiar with some graph algorithms such as shortest path and minimum spanning tree.

LEARNING OUTCOMES:

- 1. To implement the space and time complexity of algorithms.
- 2. To implement different data structures including stack, queue, linked list, tree, heap, graph, and hash table.
- 3. To implement insert, retrieve, and delete operations and traversals of binary search trees.
- 4. To implement traversal algorithms on graphs.
- 5. To implement hash tables along with insert and retrieve operations.

LIST OF EXPERIMENTS

1.	Write a program to search an array in a 2-d array using linear search.
2.	Write a program to search an element in an array using binary search.
3.	Write a program to perform following operations on matrices(A) Addition(B)Subtraction(C)Multiplication(D)Transpose
4.	Using iteration and recursion concepts write the program for quick sort.
5.	Write a program for swapping of two numbers using 'call by value' and 'call by reference' methods.
6.	Write a program to perform various operations on link list1. Add a node 2. Delete a node3. Display
7.	Write a program to perform various operations on stack such as insertion, deletion, traverse using array.
8.	Write a program to sort numbers using the bubble sort algorithm.
9.	Write a program to perform various operation on circular queue such as insert, delete, traverse using array.
10.	Write a program to sort numbers using selection sort algorithm.
11.	Write a program to simulate the various graph traversing algorithms.
12.	Write a program which simulates the various tree traversal algorithms.
Experin	nents based on advanced topics:
13.	Write a program to perform various operation on queue such as insert, delete, traverse using array.
14.	Write a program to sort numbers using insertion sort algorithm.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 75 marks for practical.

FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to provide basic knowledge of integration of Algebra with computers. It discusses technical issues relating to set theory, propositional calculus, algebraic structures, graphs and trees.

- 1. Simplify and evaluate basic logic statements including compound statements, implications, inverses, converses, and contra positives using truth tables and the properties of logic.
- 2. Express a logic sentence in terms of predicates, quantifiers, and logical connectives.
- 3. Apply the operations of sets and use Venn diagrams to solve applied problems; solve problems using the principle of inclusion-exclusion.
- 4. Determine if a graph has an Euler or a Hamilton path or circuit.

LEARNING OUTCOMES:

On successful completion of this module, students should be able to:

- 1. Understand and analyze partial order relations and their applications
- 2. Work on counting techniques.
- 3. Work on graph algorithms and tree usages
- 4. Understand the need of algebra in computer science.

MODULE CONTENT:

Unit-I: Set Theory

Introduction to set theory, Set operations, Algebra of sets, Duality, Finite and Infinite sets, Classes of sets, Power Sets, Multi sets, Cartesian Product, Representation of relations, Types of relation, Equivalence relations and partitions, Partial ordering relations and lattices Function and its types, Composition of function and relations, Cardinality and inverse Relations.

Unit-II: Propositional Calculus

Introduction to propositional Calculus: Basic operations: $AND(^)$, OR(v), $NOT(\sim)$, Truth value of a compound statement, propositions, tautologies, contradictions.

Unit-III: Techniques of Counting and Recursion and recurrence Relation

Permutation with and without repetition, Combination. Polynomials and their evaluation, Sequences, Introduction to AP, GP and AG series, partial fractions, linear recurrence relation with constant coefficients, Homogeneous solutions, Particular solutions, Total solution of a recurrence relation using generating functions.

Unit-IV: Algebric Structures

Definition and examples of a monoid, Semigroup, Groups and rings, Homomorphism, Isomorphism and Automorphism, Subgroups and Normal subgroups, Cyclic groups, Integral domain and fields, Cosets, Lagrange's theorem.

Unit-V: Section Graphs

Introduction to graphs, Directed and Undirected graphs, Homomorphic and Isomorphic graphs, Subgraphs, Cut points and Bridges, Multigraph and Weighted graph, Paths and circuits, Shortest path in weighted graphs, Eurelian path and circuits, Hamilton paths and circuits, Planar graphs, Euler's formula.

Unit-VI: Trees

Trees, Spanning trees, Binary trees and its traversals.

RECOMMENDED BOOKS:

TEXT BOOK	Elements of Discrete Mathematics by C.L Liu, 1985, McGraw Hill

LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. To have a thorough understanding of the basic structure and operation of a digital computer.
- 2. To discuss in detail the operation of the arithmetic unit including the algorithms & implementation of fixed- point and floating-point addition, subtraction, multiplication & division.
- 3. To study the different ways of communicating with I/O devices and standard I/O interfaces.
- 4. To study the hierarchical memory system including cache memories and virtual memory.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Understand pipelining, instruction set architectures, memory addressing.
- 2. Understand the performance metrics of microprocessors, memory, networks, and disks.
- 3. Understand the various techniques to enhance a processors ability to exploit Instruction-level parallelism (ILP), and its challenges.
- 4. Explain how the various parts of a modern computer function and cooperate
- 5. Exploit the advantages of a computer memory having virtual memory and cache.

MODULE CONTENT

Unit I: Digital Logic

Boolean algebra and logic gates, combinational logic blocks (adders, multiplexers, encoders, decoder), sequential logic blocks (latches, flip-flops, registers, counters).stored program control concept, flynn's classification of computers (SISD, MISD, MIMD); multilevel viewpoint of a machine: digital logic, micro architecture, ISA, operating systems, high level language; structured organization; CPU, caches, main memory, secondary memory units & I/O; performance metrics; MIPS, MFLOPS.

Unit II: Instruction Set Architecture

Instruction set based classification of processors (RISC, CISC, and their comparison); addressing modes: register, immediate, direct, indirect, indexed; operations in the instruction set; arithmetic and logical, data transfer, control flow; instruction set formats (fixed, variable, hybrid). Language of the machine: 8086; simulation using MSAM.

Unit III: Basic non pipelined CPU Architecture

CPU architecture types (accumulator, register, stack, memory/ register), detailed data path of a typical register based CPU, fetch-decode-execute cycle (typically 3 to 5 stage); micro coded CPU: Pentium processor. Microinstruction sequencing, implementation of control unit, enhancing performance with pipelining.

Unit IV: Memory Hierarchy

The need for a memory hierarchy (locality of reference principle, memory hierarchy in practice: cache, main memory and secondary memory, memory parameters: access/ cycle time, cost per bit); main memory (semiconductor RAM & ROM organization, memory expansion, static & dynamic memory types); cache memory (associative & direct mapped cache organizations. virtual memory, high speed memories.

Unit V: Parallelism

Introduction to parallelism and computer organization, goals of parallelism (exploitation of concurrency, throughput enhancement); Amdahl's law; instruction level parallelism (pipelining, super scaling –basic features); processor level parallelism (multiprocessor systems overview).

Unit VI: Computer Organization(8086)

Instruction codes, computer register, computer instructions, timing and control, instruction cycle, type of instructions, memory reference, register reference. I/O reference, basics of logic design, accumulator logic, control memory, address sequencing, micro-instruction formats, micro-program sequencer, stack organization. Instruction formats, types of interrupts; memory hierarchy.

LAST REVISION DATE	

INSTRUCTIONS:

In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to teach students how to provide better understanding of the concepts of Electronic Commerce .It will also enable students to learn about security in e-commerce, intelligent agents.

- 1. To teach students about E-Commerce Framework and EDI.
- 2. To teach students about Security in E-Commerce.
- 3. To make students understand about Intelligent Agents.

LEARNING OUTCOMES

Following this course, student will be able to learn:

- 1. About E-Commerce Framework and EDI.
- 2. About Security in E-Commerce.
- 3. About Electronic Payment Systems.
- 4. About Intelligent Agents.

MODULE CONTENT

UNIT-I: Introduction

History of E- Commerce, overview of E-commerce framework, E-Business models, network infrastructure, role of Internet, E- commerce and World Wide Web.

UNIT-II: Consumer Oriented E-Commerce

Consumer oriented E-commerce applications, mercantile process models, electronic payment systems, Digital Token based EPS: Smart cards, credit cards, risks designing EPS.

UNIT-III: Organizational Commerce & EDI

Electronic Data Interchange, EDI applications in business, EDI and E-commerce, EDI standardization and implementation, Internet based EDI.

UNIT-IV: Security

Internet security standards, secure electronic payment protocols, cryptography and authentication, security issues, encryption techniques.

UNIT-V: E-commerce Payment Mechanisms

E-commerce payment mechanisms, SET protocol, electronic check, electronic cash, E-commerce ethics, regulations and social responsibility.

UNIT-VI: Intelligent Agents

Definition and capabilities, limitation of agents, security, web based marketing, search engines and directory registration, online advertisements, portables and info mechanics, website design issues.

RECOMMENDED BOOKS

	1.	Frontiers of Electronic Commerce by Ravi Kalakota and Andrew B.
TEXT BOOK		Whinston, Pearson Education Asia, 1999.
	2.	Electronic commerce: Security, Risk Management and Control by Marilyn
		Greenstein and Todd M Feinman, Tata McGraw-Hill , 2000.
	1.	E Marketing by Judy Strauss and Raymond Frost, PHI, 2002.
REFERENCE	2.	Managing e Commerce Business by Brenda Kienan, PHI, 2001.
NEFENEI (CE	3.	Developing e Commerce Sites - an integrated approach by Vivek Sharma
		and Rajiv Sharma, Pearson Education Asia, 2000.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Assessments	1	2	3	4
Class Test	Х	Х		
Quiz	Х		Х	
Assignment	Х		Х	Х

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes		1		3	4	2					

EVALUATION

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - III

Digital Electronics

L T P 4 0 0

MODULE CODE	CSEN2206
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total, EIGHT questions will be set. Question ONE will be compulsory and cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to develop understanding on basics of digital circuits, combinational and sequential circuits so that learner will be able to make basic digital circuits in real life. Some of the objectives of the course are:

- 1. To acquire basic knowledge of the basic concepts of basic digital circuits and its advantages.
- 2. To inculcate the knowledge of Digital Electronics fundamentals.
- 3. To enable to solve digital circuits adders, subtractors, multiplexer and demultiplexer.
- 4. To get familiar with the concept of designing like flip-flops & Counters.
- 5. To understand the concept of semiconductor memories like RAM, ROM, PLA, PAL, FPGA etc.
- 6. To gain knowledge of A/D &D/A converters.

LEARNING OUTCOMES:

- 1. Able to understand basic aspects of digital circuits used in any kind of industry.
- 2. Able to understand various digital electronics applications in day to day life.
- 3. Get familiar with working of various gates and IC of a circuit.
- 4. Ability to analyze the behavior of digital circuits in different forms.
- 5. Able to measure various digital circuit parameters.
- 6. Able to design different semiconductor memories.
- 7. Able to convert one analog circuit to digital circuit and vice versa.

MODULE CONTENTS:

Unit I: Number System and Binary Code

Introduction, Binary, Octal and Hexadecimal Number System (Conversion, Addition & Subtractions). Signed and unsigned numbers, Binary Subtractions using 1's and 2's compliment, ASCII code, Excess 3 code, Grey code, BCD code and BCD additions.

Unit II: Minimization of logic function

OR, AND,NOT,NOR,NAND,EX-OR, EX-NOR, Basic theorem of Boolean Algebra, Sum of Products and Product of Sums, canonical form, Minimization using K-map and Q-M method.

Unit III: Combinational Circuits

Introduction, Combinational circuit design, Encoders, decoders, Adders, Subtractors and Code converters. Parity checker, seven segment display, Magnitude comparators. Multiplexers, De-multiplexer, Implementation of Combinational circuit using MUX.

Unit IV: Sequential Circuits

Introduction, flip flops, Clocked flip flops, SR, JK, D, T and edge triggered flip-flops. Excitation tables of Flip flops. Shift Registers, Type of Shift Registers, Counter, Counter types, counter design with state equation and state diagrams.

Unit V: D/A and A/D Converters

Introduction, Weighted register D/A converter, binary ladder D/A converter, steady state accuracy test, D/A accuracy and resolution, parallel A/D converter, Counter type A/D converter Successive approximation A/D converter. Single and dual slope A/D converter, A/D accuracy and resolution.

Unit VI: Semiconductor Memories

Introduction, Memory organisation, Classification and characteristics of memories, Sequential memories, ROMs, R/W memories. Content addressable memories. PLA and PAL.

RECOMMENDED BOOKS:

TEXT BOOKS	 Digital Design by Morris Mano Prentice Hall of India Pvt. Ltd Digital Principles and Applications, by Donald P. Leach and Albert Paul Malvino, Tata McGraw Hill Publishing Company Limited, New Delhi, 2003. Modern Digital Electronics, by R. P. Jain, Tata McGraw-Hill
	publishing Company limited, New Delhi, 2003.
REFERENCE BOOKS	1. Digital Fundamentals, by Thomas L. Floyd, Pearson
	Education, Inc, New Delhi, 2003.

METHODS OF TEACHING AND STUDENT LEARNING

SEMESTER – III

Internet & Web Technology

L T P 4 0 0

MODULE CODE	CSEN2207
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS:

In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how to provide better understanding of the concepts of internet & web technology. It will also enable students to learn about router technologies, search engines, web crawlers & website development.

- 1. To teach students about internet & router technologies.
- 2. To teach students about web server technologies.
- 3. To make students understand about functioning of search engines & web crawlers.
- 4. To make students learn about website development.

LEARNING OUTCOMES

Following this course, student will be able to learn:

- 1. About Internet & router technologies.
- 2. About Web Server technologies.
- 3. About browsing systems.
- 4. About functioning of Search Engines & Web Crawlers.
- 5. About website development.

MODULE CONTENT

UNIT-I: Introduction

Internet protocol model, Internet addresses, IP routing concepts, table driven and next hop routing, other routing related protocols, Internet access through PPP, SLIP,WWW, web servers, browsers.

UNIT-II: Router Technology

Hubs, bridges, routers, routing protocols, routing security, switch based routing, routing in unicast environment, multicasting, mobile routing.

UNIT-III: Web Server Technology

Web's Robot global access to information, HTML, HTTP, accessing a web server, publishing on web server, Secure HTTP, secure sockets layer, WWW proxies, IIS, case study of apache web server.

UNIT-IV: Browsing Systems

Searching and web casting Technique, popular web servers, basic features bookmarks, cookies, progress indicators, customization of browsers, browsing tricks, next generation web browsing.

UNIT-V: Search Engines & Web Crawlers

Search engines, architecture of search engines, search tools, web crawlers, types of crawlers, scalable web crawler, incremental crawler, parallel crawler, focused crawler, agent based crawler, case study of IE.

UNIT-VI: Website Development

HTML, XHTML, DHTML, XML, structuring data, namespaces, XML schema documents, document object model, DOM methods, simple API for XML, XSL, SOAP, ASP.Net, security and management issues for creating a website.

RECOMMENDED BOOKS

	1. Fundamentals of the Internet and the World Wide Web by
ТЕХТ ВООК	Raymond Greenlaw and Ellen Hepp – 2001, TMH.
	2. Internet & World Wide Programming by Deitel, Deitel& Nieto,
	2000, Pearson Education.
	3. Beginning XHTML by Frank Boumpery, Cassandra Greer,
	Dave Raggett, JenetRaggett, SubastianSchnitenbaumer& Ted
	Wugofski, 2000, WROX press(Indian Shroff Publ. SPD) Ist
	Edition.
	1. Complete Reference Guide to Java script by Aron Weiss,
REFERENCE	QUIE, 1997.
	2. Intranet & Internet Engg. byMinoli.
	3. Internet & Web Technology by Rajkamal.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

SEMESTER – III (ELECTIVE – II)

Modelling and Simulation

L T P 4 0 0

MODULE CODE	CSEN2208
CREDIT POINTS	4
FORMATIVE ASSESSMENT MARKS	50
SUMMATIVE ASSESSMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students about fundamental and techniques for designing and using simulation, modelling, and optimization algorithms.

- 1. Introduce computer simulation technologies and techniques.
- 2. Introduce concepts of modelling layers of society's critical infrastructure networks.
- 3. Build tools to view and control simulations and their results.
- 4. Utilize the Modelling Process to identify the key parameters of a model, estimate model outcomes, utilize a computational tool
- 5. Explain and conduct the transforming of continuous functions and dynamics equations into discrete computer representations.

LEARNING OUTCOMES:

- 1. Solve problem with a breadth and perspective on modelling.
- 2. Have good training in computation and simulation methods.
- 3. Create a computer representation of a specific detailed description of the problem domain.
- 4. Up-to-date with the current state of relevant technologies, to skilled in a variety of relevant software tools and methodologies.
- 5. To create simulation models of different types by understanding simulation principles.

MODULE CONTENT:

UNIT-I: Introduction to simulation

Introduction, Advantages and disadvantages of Simulation ,Areas of application, Systems and system environment, Components of a system, Discrete and continuous systems, Model of a system, Types of Models, Discrete-Event System Simulation, Steps in a Simulation Study, The basics of Spread sheet simulation, Simulation example: Simulation of queuing systems in a spread sheet.

UNIT-II: General Principles, Simulation Software

Concepts in Discrete-Event Simulation: The Event-Scheduling / Time-Advance Algorithm, World Views, Manual simulation Using Event Scheduling, List processing, Simulation in Java; Simulation in GPSS.

UNIT-III: Statistical Models and Queuing Models in Simulation

Review of terminology and concepts, Useful statistical models, Discrete distributions, Continuous distributions, Poisson process, Empirical distributions, Characteristics of queuing systems, Queuing notation, Long-run measures of performance of queuing systems, Steady-state behavior of M/G/1 queue, Networks of queues, Rough-cut modeling: An illustration.

UNIT-IV: Random-Number Generation, Random-Variate Generation

Properties of random numbers, Generation of pseudo-random numbers, Techniques for generating random numbers, Tests for Random Numbers Random-Variate Generation: Inverse transform technique, Acceptance-Rejection technique, Special properties.

UNIT-V: Input Modeling

Data Collection; Identifying the distribution with data, Parameter estimation, Goodness of Fit Tests, Fitting a non-stationary Poisson process, Selecting input models without data, Multivariate and Time-Series input models.

UNIT-VI: Estimation of Absolute Performance

Types of simulations with respect to output analysis, Stochastic nature of output data, Absolute measures of performance and their estimation, Output analysis for terminating simulations, Output analysis for steady-state simulations, Model building, verification and validation, Verification of simulation models, Calibration and validation of models, Optimization via Simulation.

RECOMMENDED BOOKS:

SEMESTER - III

Engineering Analysis and Design

L T P 4 0 0

MODULE CODE	CSEN2209
CREDIT POINTS	4
FORMATIVE ASSESSMENT MARKS	50
SUMMATIVE ASSESSMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students about fundamental and techniques for designing and using simulation, modelling, and optimization algorithms.

- 1. To impart the importance of design in today's context of global competition, environmental awareness and customer oriented market.
- 2. To impart the basic concepts and various aspects of design using simple examples and case studies.
- 3. To develop innovative technologies and find solutions to contemporary issues in engineering design.
- 4. To develop an aptitude to use engineering principles to conceptualize, create, model and test.
- 5. To evaluate designs within the context of local and global needs.

LEARNING OUTCOMES:

- 1. Appreciate the aspects of need for design, materials and processes used for designing various components.
- 2. Acquainted with the knowledge of designing creative components
- 3. Equipped with tools for improving quality, reliability and performance of a Product.
- 4. Demonstrate an ability to design and conduct experiments.
- 5. Interpret data in the area of design engineering through software.

MODULE CONTENT:

UNIT-I: Design Fundamentals

Importance of design, The design process-Considerations of Good Design, Morphology of Design ,Organization for design, Computer Aided Engineering, Designing to codes and Standards, Concurrent Engineering, Product and process cycles, Technological Forecasting, Market Identification, Competition Bench marking.

UNIT-II: Customer Oriented Design & Societal Considerations

Identification of customer needs-customer requirements, Quality Function Deployment, Product Design Specifications, Human Factors in Design, Ergonomics and Aesthetics.Societal consideration, Contracts, Product liability,Protecting intellectual property, Legal and ethical domains, Codes of ethics, Ethical conflicts, Environment responsible design, future trends in interaction of engineering with society.

UNIT-III: Design Methods

Creativity and Problem Solving, Creativity methods, Theory of Inventive Problem Solving (TRIZ), Conceptual decomposition, Generating design concepts, Axiomatic Design, Evaluation methods, Embodiment Design, Product Architecture, Configuration Design-Parametric Design, Role of models in design, Mathematical Modeling, Simulation, Geometric Modeling, Rapid prototyping Finite Element Analysis, Optimization, Search Methods.

UNIT-IV: Material Selection Processing and Design

Material Selection Process, Economics, Cost Vs. Performance, Weighted property Index,

Value Analysis, Role of Processing in Design, Classification of Manufacturing Process, Design for Manufacture ,Design for Assembly, Designing for castings, Forging, Metal Forming, Machining and Welding, Residual Stresses, Fatigue, Fracture and Failure.

UNIT-V: Probability Concepts in Design for Reliability

Probability, Distributions, Test of Hypothesis, Design of Experiments, Reliability Theory, Design for Reliability, Reliability centered Maintenance, Robust Design, Failure mode Effect Analysis.

UNIT-VI: Design for Quality

Quality Function Deployment, House of Quality, Objectives and functions, Targets, Stakeholders, Measures and Matrices, Design of Experiments, design process, Identification of control factors, noise factors, and performance metrics, developing the experimental plan, experimental design, Testing noise factors, Running the experiments, Conducting the analysis, Selecting and conforming factor, Set points, reflecting and repeating.

RECOMMENDED BOOKS:

	1. Engineering Design - A Materials and Processing Approach,
TEXT BOOKS	by Dieter, George E, McGrawHill, International Editions,
	Singapore, 2000.
	1. Engineering Design-A systematic approach by Pahl, G, Beitz,
	W, Feldhusen, J, Grote, K. H Springer Verlag, NY. 2007.
	2. Elements of Engg. Design by Ray, M.S. Prentice Hall Inc.
REFERENCEBOOKS	1985.
	3. The principles of Design by Suh, N.P, Oxford University
	Press, NY.1990.
	4. Product Design and Development by Karl T. Ulrich and
	Steven D. Eppinger McGraw Hill Edition 2008.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to understand and learn system software like compiler, linker, assembler etc. Students can learn UNIX administration and shell programming.

- 1. To be familiar with system programming tools like linker, loaders, assembler, compiler and macro processor etc.
- 2. To be familiar with the major components and describe the architecture of the UNIX operating system.
- 3. To be familiar with Basic UNIX Shell programming concepts (variables, expressions etc).
- 4. To be familiar with files and directories operations.
- 5. To be familiar with use of the vi text editor to create and modify files.
- 6. To be familiar with I/O redirection, pipes, quoting, and filename expansion mechanisms.

LEARNING OUTCOMES:

- 1. Able to describe how compiler and linker can put together in a program.
- 2. Describe how computer and operating system executes and switches programs.
- 3. Able to write programs that handle several processes and/or threads that communicate with signals.
- 4. Describe how computer and operating system handles the memory.
- 5. Able to create shell programs.

MODULE CONTENT:

Unit-I: Evolution of Components Systems Programming

Assemblers, loaders, linkers, macros, compilers; software tools, text editors, interpreters and program generators, debug monitors, programming environment.

Compiler, Assembler and Loader: Compiler: brief overview of compilation process, Assembler: problem statement, single phase and two phase assembler, symbol table; Loader schemes, compile and go loader, general loader, absolute loader, subroutine linkage, reallocating loader, direct linkage loader, binders, linking loader, overlays.

Unit-II: Macros & Theoretical Concept of Unix Operating System

Macro language and macro-processor, macro instructions, features of macro facility, macro instruction arguments, conditional macro expansion, macro calls within macros, macro instruction defining macros.

Basic features of operating system; File structure, CPU scheduling; Memory management: swapping, demand paging; File system: block and fragments, i-nodes, directory structure.

Unit -III: Getting Started with Unix

User names and groups, logging in; Format of Unix commands; Changing your password; Characters with special meaning; Unix documentation; Files and directories; Current directory, looking at the directory contents, absolute and relative pathnames, some Unix directories and files; Looking at the file contents; File permissions; basic operation on files; changing permission modes; Standard files: standard output, standard input, standard error; filters and pipelines; Processes; finding out about processes; Stopping background process.

Unit-IV: Text Manipulation

Inspecting files; File statistics; Searching for patterns; Comparing files; Operating on files; Printing files; Rearranging files; Sorting files; Splitting files; Translating characters; AWK utility.

Unit-V: Shell Programming

UNIX editor vi, programming in the Borne and C-Shell; Wild cards; Simple shell programs; Shell variables; Shell programming constructs; interactive shell scripts; Advanced features.

Unit-VI: System Administration

Definition of system administration; Booting the system; Maintaining user accounts; File systems and special files; Backups and restoration; Role and functions of a system manager.

RECOMMENDED BOOKS:

TEXT BOOKS	1. Systems Programming by Donovan, TMH.
TEAT BOOKS	2. The Unix programming environment by Brain Kernighen&
	Rob Pike, 1984, PHI & Rob Pike.
	1. Advanced Unix programmer's Guide by Stephen Prato, BPB
REFERENCE BOOKS	2. Unix- Concept and applications by Sumitabha Das, 2002,
	Т.М.Н.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

Management and Professional Leadership

L T P 3 0 0

MODULE CODE	MGMT0101
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total SEVEN questions will be set. Question ONE will be compulsory and will cover all units. Remaining six questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how to design, write, and analyse the financial data of a firm or a company. It will also enable students to learn the complete accounting process.

- 1. To provide knowledge and understanding of the basics of management.
- 2. To develop an understanding of leadership and its styles.
- 3. To make them understand the role of planning, organizing and decision making to lead the organization.
- 4. To identity value of group involvement and team building.
- 5. To make them understand the role of communication to lead the organization.
- 6. To provide an understanding of role of motivation to lead in the organization.

LEARNING OUTCOMES

Following this course student will be able to:

- 1. Develop an understanding of the process of management in the organizations and to apply that process for effective utilization of resources.
- 2. Develop an understanding of role of leadership in the organizations.
- 3. Acquaint themselves to apply leadership styles and theories as it relates to management practices.
- 4. Identify value of motivation, emotional intelligence and stability in resolving organizational problems.
- 5. Develop an understanding of communication and its role to the organization.
- 6. Analyse group formations, work team and team building strategies of the organization.

MODULE CONTENT

Unit 1: Management-introduction

Nature and functions of management, principles of management, levels of management, management as an art, management as science and profession, management process, managerial skills and roles; Evolution of Management Thoughts; Managerial competencies.

Unit II:: Basic concepts of Leadership

Leadership: Functions of leaders, styles of leadership, leadership theories- Trait theory, Behavioral Theory.

Unit III: Planning, Organizing and Decision making

Planning- process of planning, elements of planning; steps in Organizing, authority and responsibility, delegation, centralization vs. decentralization; decision making, rationality in decision making.

Unit IV:: Team Development

Work team , nature of work teams, types of team, stages of team development, role of leadership in team development.

UNIT-V: Communication

Communication: Communication process, importance of communication, communication channels, Roles and barriers to communication.

<u>Unit VI: Motivation</u>: Process and motivation models/approaches; relevance of motivation theories in Business.

RECOMMENDED BOOKS

TEXT BOOK		Fundamentals of Management: Robbins, S.P. and Decenzo, D.A Pearson
		Education Asia, New Delhi
	2.	Organizational Behaviour: F Luthan's, Tata McGraw Hill, New Delhi
REFERENCE	1.	Organizational behaviour: S P Robbins, Prentice Hall of India, New Delhi
	2.	Essentials of management: Chhabra T.N., Sun India publications

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).
ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for Theory.

Assessment #	Type of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	05
2.	Sessional Test	2	15
3.	Group Discussion	4	05

Course Learning			1	4	6		5		2	2	
Outcomes			1	4	0		5		2	3	

EVALUATION

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

INSTRUCTIONS: All questions are compulsory. Each question may have multiple options and will cover all units.

OBJECTIVES:

The aim of this subject is to develop understanding on different aspects related to analytical and business skills in Aptitude and to enhance skills as mentioned below:

- 1. To prepare students to develop basic understanding in Aptitude.
- 2. To acquire knowledge on various analytical tools.
- 3. To understand syntax and semantics of Aptitude in business.

LEARNING OUTCOMES:

- 1. Able to understand the basic fundamentals & concepts of Aptitude.
- 2. Exposure to various analytical tools used in business.
- 3. Ability to use different mathematical techniques.
- 4. Able to understand the importance of Aptitude.

MODULE CONTENTS

UNIT 1:- FUNDAMENTALS & USES OF ARITHMETIC-

Percentage, Ratio & Proportion: Percentage Meaning and Computations of Percentages, Definition of Ratio, Continued Ratio, Inverse Ratio, Definition of Proportion, Continued Proportion, Direct Proportion.

Profit And Loss :Terms and Formulae, Trade discount, Cash discount, Problems involving cost price, Selling Price, Trade discount and Cash Discount, Problems involving cost price, selling price, trade discount and cash discount.

Interest: Simple Interest, Compound Interest, Equated Monthly Instalments (EMI), Word Problems.

Sequence and Series: AP, GP (simple word problems only).

Average: Definition, meaning and simple problems on average.

UNIT 2: DATA ANALYSIS-

To understand different types of data format.

To acquire skills for analyzing different data format.

To understand scope and limitations of data uses in business.

Bar graph: Reading and interpretation of bar graph in vertical forms, reading scales, creating bar graph from given data, solving problems using information presented in bar graph.

Table: Creating table from given data, Reading and interpreting table, solving problems using information presented in table.

Line graph: Reading and interpreting line graph, solving problems using information presented in line graph.

Shares and Dividends: Concept of shares, stock exchange, Face value, Market value, Dividend, Equity shares, Preferential shares, Bonus share with examples.

Matrices and Determinants :Definition of Matrix ,Types of Matrix, Algebra of Matrix (Addition and Multiplication), Determinant, Adjoint of Matrix, Inverse of Matrix via Adjoint matrix, Solving simultaneous equations(Order3).

UNIT 3: ESSENTIALS OF LANGUAGE AND COMMUNICATION-

Speaking Skills: Formal and Informal Conversation, Conversation in the work place, Interviews, Public

Speech, Lectures.

Listening Skills: Comprehending, Retaining, Responding, Tactics, Barriers to Listening, Overcoming listening barriers, Misconception about listening.

Reading Skills: Acquiring Reading, Reading Development, Methods of Teaching, Reading difficulties.

Writing skills: Note-making, CV's, Report writing, Copy Writing, Agenda, Minutes, Circular, Essay writing

on any current issues, Paragraph, Essay Writing, Writing Research Papers, Dissertation.

<u>UNIT4:</u> Assignment 1, Assignment2, Project

RECOMMENDED BOOKS:

TEXT BOOKS	 R S Agarwal quantitative aptitude book Abhijit Guha quantitative aptitude book
ILAI DOORS	 Minippally, Methukutty. M. 2001. Business Communication Strategies. 11th Reprint. Tata McGraw – Hill. New Delhi.
	1. Aptitude books by Arihant publication
REFERENCE BOOKS	2. Swets, Paul. W. 1983. The Art of Talking So That People Will Listen:
	Getting Through to Family, Friends and Business Associates. Prentice
	Hall Press. New York.

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning										1.2	3.1
Outcomes										1,2	5,4

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	1	10
2.	Sessional Test	2	15
3.	End Semester Written Exam	1	50
4.	End Semester Oral Exam	1	25

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4
Class Test	Х	Х	Х	
Quiz	Х	Х	Х	
Assignment			Х	Х

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER – III

Professional Communication – I

L T P 2 0 0

MODULE CODE	VALU0123
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	50
END SEMESTER EXAM DURATION	2 hrs
LAST REVISION DATE	

INSTRUCTIONS: The question paper will consist of ten questions distributed over three sections A, B and C Section A comprise of one question carrying very short answer type questions and is compulsory, Section B comprise of two short answer type questions and Section C comprises of five long answer type questions These sections will also have internal choices of questions

OBJECTIVE

- 1. To learn the fundamentals of different structures of English grammar
- 2. To calculate the structures and patterns of English Language and to use them correctly in speaking
- 3. To learn about the creative literature writings
- 4. To improve speaking and writing
- 5. To inculcate professional skills of presenting and working
- 6. To understand different types of literatures and background with critical insights
- 7. To make students aware of the detailed exposition of English Language

LEARNING OUTCOMES

Following this course students will be able to:-

- 1. Identify the different structures and patterns of English Language
- 2. To make students a good Public Speaker
- 3. To make students aware about different literature of the World
- 4. To make students speak well in Professional English Speaking and writing highly professional in particular
- 5. Know the process of Communication and its ethics
- 6. To make students write in professional manner

MODULE CONTENT

UNIT : I GENERAL COMMUNICATION SKILLS

- Introduction to Communication
- Nature of Communication
- One-way versus two way Communication
- Characteristics of Communication and its objects
- Various stages of communication process
 - Downward/upward and Horizontal Communication
- Presentation Skills
- Introduction to the Novel
- Reading Comprehension and Group Discussion
- Tense-Formation
- Short Stories
 - o Joothan by Prem Chand
 - o Raja Rao (Kanthapura)
 - DH Lawrance (Sons and Lovers)

UNIT : II PATTERN AND STRUCTURE OF ENGLISH GRAMMAR AND EFFECTIVE SPEAKING

- Articles
- Quantifiers
- Usage of different comma's in writing
- Bio-data and resume writing
- Speech (Formation and public speaking)
- The Gift of Magi
- The lament, by Anton Chekov
- The Barber's trade union by Mulak Raj Anand
- Bertolt Brecht (The Good Woman of Setzuan)

UNIT : III LINGUISTICS AND PARALINGUISTIC FEATURES OF DELIVERY OF SPEECH

- What is Linguistics
- Passive Voice
- Adverbs
- Phrasal Verbs
- Modals
- Conjunctions
- Notice
- Reading Comprehension
- AS Byatt (Virgin in the Garden)
- Caustave Flaubert Madame Bovery
- Alice Walker (Color Purple)

UNIT : IV LINGUISTIC PATTERNS OF LANGUAGE AND COMMUNICATIONS

- Article Writing
- The formation of words
- Formation of abstract Nouns from Concrete Nouns
- Components of communication and their implementation

• Formation of verbs from Noun

- LITERARY WORKS
 - a. Joe Orton :- What the Butler Saw
 - b. Leo Tolstoy :-Anakerenine
 - c. Ivan Turgenev :- Fathers and Son
- UNIT : V PROFESSIONAL SPEAKING SKILLS-I
 - Professional Speaking (PUBLIC SPEAKING ART)
 - Complaint and Job/Sales Letters
 - Noun and the number countable/uncountable/collective/abstract and material
 - Syntax (Infinitive/General and different structures of Grammar
 - Past/Present and Future (Tense formation)
 - Literary works
 - Tess of the d'urbervillers by Thomas hardy
 - The old man and the sea by Ernest Hemingway
 - Deliverane by Prem Chand
 - Jane Austen (Emma)

UNIT : VI PROFESSIONAL SPEAKING SKILLS -II

- Derrida's views upon language
- Description of Tools of Communication
- One word Substitute
- Sentence Structure
- Verb Patterns and their usage LITERARY WORKS
 - a. GB Shaw :- Arms and the man
 - b. JM Synge :- Playboy of the western world
 - c. Jeanette winterson :- Oranges are not the only fruit
 - d. SomerestMaugham :- Razor's edge

Recommends Books

TEXT BOOK	Essential of Communication by BR Sharma
Reference	Derrida (Semiotics and Sign Structure)

MAPPING OF COURSE OBJECTIVES AGAINST STUDENTS LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e

Database Management Systems

\mathbf{L}	Т	P
3	0	0

MODULE CODE	CSEN2111
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to provide keen knowledge of database and data protection by keeping data backup, recovery.

- 1. Understand the role of a database management system in an Organization, Understand basic database concepts, including the structure and operation of the relational data model.
- 2. Construct simple and moderately advanced database queries using Structured Query Language (SQL).
- 3. Understand the concept of a database transaction and related database facilities, including concurrency control, journaling, backup and recovery, and data object locking and protocols.
- 4. Describe and discuss selected advanced database topics, such as distributed database systems and the data warehouse.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Analyse the basic concepts and architecture associated with DBMS.
- 2. Apply normalization steps in database design and removal of data anomalies.
- 3. Describe the characteristics of database transactions and how they affect database integrity and consistency.
- 4. Create, maintain and manipulate a relational database using SQL Learning the techniques of recovery and security in databases.

MODULE CONTENT:

Unit- I: Introduction to DBMS

Overview of DBMS, views of data, data Models, Introduction to Database Languages. Advantages of DBMS over file processing systems, Responsibility of DBA.

E-R Diagram and Keys: Introduction to Client/Server architecture, three levels architecture of Database Systems, E-R Diagram (Entity Relationship), mapping Constraints, Keys, Concepts of Super Key, candidate key, primary key, Generalization, aggregation, Reduction of E-R diagram into tables.

Unit- II: Relational Model and Calculus

Relational data Model and Language: Relational data model concepts, integrity constraints, entity integrity, referential integrity, Keys constraints, Domain constraints, relational algebra, relational calculus, and tuple and domain calculus.

Unit- III: Introduction on SQL

Characteristics of SQL, advantage of SQL. SQL data type and literals. Types of SQL commands. SQL operators and their procedure. Tables, views and indexes. Queries and sub queries. Aggregate functions. Insert, update and delete operations, Joins, Unions, Intersection, Minus, Cursors, Triggers, and Procedures in SQL/PL SQL.

Unit- IV: Data Base Design & Normalization

Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependence, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design.

Unit- V: Transaction Processing Concept& Concurrency Control Techniques

Transaction system, Testing of serializability, serializability of schedules, conflict & view serializable schedule, recoverability, Recovery from transaction failures, log based recovery, checkpoints, deadlock handling.

Concurrency Control Techniques: Concurrency control, Locking Techniques for concurrency control, Time stamping protocols for concurrency control, validation based protocol, multiple granularity, Multi version schemes, Recovery with concurrent transaction.

Unit-VI: Distributed Database& File Organization

Introduction to Distributed Data processing, parallel Databases, data mining & data warehousing. File Organization: Sequential Files, index sequential files, direct files, Hashing, B-trees Index files.

RECOMMENDED BOOKS:

TEXT BOOK	 Database System Concepts by A. Silberschatz, H.F. Korth and S. Sudarshan, 3rd edition, 1997, McGraw-Hill, International Edition. Introduction to Database Management system by Bipin Desai, 1991, Galgotia Pub
REFERENCE	 Fundamentals of Database Systems by R. Elmasri and S.B. Navathe, 3rd edition, 2000, Addision-Wesley, Low Priced Edition.

METHODS OF TEACHING AND STUDENT LEARNING:

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	5
2.	Sessional Test	2	15
3.	Group Discussion	4	5
4.	End Semester Exam	1	75

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	а	b	с	d	e	f	g	h	i	j	K
Course Learning Outcomes			2,3	1	2	4					

EVALUATION:

At the end of semester, course faculty will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Database Management System Lab

L T P 0 0 2

MODULE CODE	CSEN2112
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES:

- 1. Understand the role of a database management system in an Organization.
- 2. Understand basic database concepts, including the structure and operation of the relational data model.
- 3. Construct simple and moderately advanced database queries using Structured Query Language (SQL).
- 4. Understand and successfully apply logical database design principles, including E-R diagrams and database normalization.
- 5. Understand the concept of a database transaction and related database facilities.

LEARNING OUTCOMES:

- 1. Analyze the basic concepts and architecture associated with DBMS.
- 2. Apply normalization steps in database design and removal of data anomalies.
- 3. Describe the characteristics of database transactions and how they affect database integrity and consistency.
- 4. Create, maintain and manipulate a relational database using SQL.
- 5. Learn the techniques of recovery and security in databases.

LIST OF EXPERIMENTS

1	To study about DBMS, RDBMS and ORDBMS.
2.	To study about SQL (Structured Query language).
3.	Write SQL commands to create database.
4.	Write SQL commands to add data constraints.
5.	Write SQL query to implement SELECT command with different clauses.
6.	Write SQL commands to implement SINGLE ROW functions (character, numeric).
7.	Write SQL commands to implement GROUP functions (avg, count, max, min, Sum).
0	Write SQL commands to implement various type of SET OPERATORS (Union,
0.	Intersect, Minus).
9.	Write SQL commands to implement various type of Integrity Constraints.
10.	Write commands to implement various SQL operators.
11.	Write SQL commands to implement Various type of JOINS.
12.	Write SQL commands to create view and index.
Experir	nents based on advanced topics:
13.	Write sub queries in SQL.
14.	Introduction to PL/SQL.

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

MAPPING OF COURSE LEARNING OUTCOMES

Course Learning Outcomes		3	4	4,5	1	2	2				

EVALUATION

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Object Oriented Programming using C++

L T P 3 1 0

MODULE CODE	CSEN2113
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

- 1. To get a clear understanding of object-oriented concepts.
- 2. To understand object oriented programming through C++.
- 3. Demonstrate adeptness of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
- 4. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching.

LEARNING OUTCOMES:

- 1. Gain the basic knowledge on Object Oriented concepts.
- 2. Ability to develop applications using Object Oriented Programming Concepts.
- 3. Ability to implement features of object oriented programming to solve real world problems.

MODULE CONTENT:

Unit-I: Introduction

C++ Standard Library, Basics of a Typical C++ Environment, Pre-processors Directives, Illustrative Simple C++ Programs. Basic concepts of Object Oriented Programming.

Introduction, Structure Definitions, Accessing Members of Structures, Class Scope and Accessing Class Members, Separating Interface from Implementation, Classes: Const(Constant) Object and Const Member Functions, Object as Member of Classes, Access Modifiers: Controlling access to a class, method, or variable (public, protected, private, package), Other Modifiers.

Unit-II: Constructors and Destructors

Declaration and Definition, Characteristics of Constructors, Types of Constructors, Using Default Arguments with Constructors, Using Destructors.

Friend Function and Friend Classes, Using This Pointer, Dynamic Memory Allocation with New and Delete, Static Class Members.

Unit-III: Overloading

Function Overloading, Operator Overloading, Restrictions on Operators Overloading, Operator Functions as Class Members vs. as Friend Functions, Overloading Unary Operators, Overloading Binary Operators, Overloading vs overriding.

Stream Input/output Classes and Objects, Stream Output, Stream Input, Unformatted I/O (with read and write), Stream Manipulators, Stream Format States, Stream Error States.

Unit-IV: Inheritance

Introduction to Inheritance, Base Classes and Derived Classes, Protected Members, Casting Base- Class Pointers to Derived- Class Pointers, Using Member Functions, Overriding Base – Class Members in a Derived Class, Public, Protected and Private Inheritance, Using Constructors and Destructors in derived Classes, Implicit Derived –Class Object To Base-Class Object Conversion, Composition Vs. Inheritance.

Unit-V: Virtual Functions and Exception Handling

Introduction to Virtual Functions, Abstract Base Classes and Concrete Classes, Polymorphism, New Classes and Dynamic Binding, Virtual Destructors.

Introduction to Exception Handling, Basics of C++ Exception Handling: Try Throw, Catch, Throwing an Exception, Catching an Exception, Rethrowing an Exception, Exception specifications, Processing Unexpected Exceptions, Stack Unwinding, Constructors, Destructors and Exception Handling, Exceptions and Inheritance.

Unit-VI: File Handling

Files and Streams, Creating a Sequential Access File, Reading Data From A Sequential Access File, Updating Sequential Access Files, Random Access Files, Creating A Random Access File, Writing Data Randomly To a Random Access File, Reading Data Sequentially from a Random Access File. Function Templates, Overloading Template Functions, Class Template, Class Templates and Non-Type Parameters, Templates and Inheritance, Templates and Friends, Templates and Static Members.

RECOMMENDED BOOKS:

	1 C++ How to Program by H M Daitel and P I Daitel 1008		
	Drantice Hall		
TEXT BOOKS			
IEAI DOORS	2. Object Oriented Programming in Turbo C++ by Robert		
	Lafore1994, The WAITE Group Press.

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	а	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes	3	1	2,3	2	1	2,3					

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

OOPS using C++ Lab

L T P 0 0 2

MODULE CODE	CSEN2114
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To strengthen their problem solving ability by applying the characteristics of an object oriented approach.
- 2. To introduce object oriented concepts in C++.
- 3. To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Explain what constitutes an object-oriented approach to programming and identify potential benefits of object-oriented programming over other approaches.
- 2. Apply C++ features to design and implement program using Object Oriented Programming Concepts.
- 3. Ability to implement features of object oriented programming to solve real world problems.
- 4. Understand the concepts of file handling and streams. In addition they must know how to apply generic programming through templates to make code reusable.
- 5. Discover errors in a program and describe techniques to resolve them.

LIST OF EXPERIMENTS

1.	Given that an EMPLOYEE class contains following members: data members: Employee number, Employee name, Basic, DA, IT, Net Salary and print data members. Write a C++ program to read the data of N employee and compute Net salary of each employee (DA=52% of Basic and Income Tax (IT) =30% of the gross salary).
2.	Write a C++ program to implement single, multiple, multilevel, hierarchical, hybrid inheritance.
3.	Write a C++ program to invoke Constructor and Destructor.
4.	Write a C++ program to overload unary operator, binary operator.
5.	Write a program to design a class having static member function.
6.	Write a program to find maximum out of two numbers using friend function.
7.	Write a C++ program to use pointer for both base and derived classes and call the member function. Use Virtual keyword.
8.	Write a C++ program to implement stream manipulators.
9.	Write a C++ program to implement function template.
10.	Write a C++ program to implement class template.
11.	Write a C++ program to implement the exception handling with rethrowing an exception.
12.	Write a C++ program to perform read/write binary input/output operation on a file.
Experir	nents based on advanced topics:
13.	Write a C++ program to make scientific calculator.
14.	Write a C++ program to make paint brush.

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes		1	2,3	2,3	1	5	3				

EVALUATION

At the end of semester, course faculty will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Principles of Operating System

L T P 3 0 0

MODULE CODE	CSEN2115
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students about different aspects of operating system.

- 1. To make students familiar with the basic concepts of Operating System & its types.
- 2. To learn different concepts of process and CPU Scheduling Algorithms.
- 3. To make students gain in-depth understanding of memory allocation schemes and to understand the concept of Virtual Memory using Demand Paging.
- 4. To learn File System this includes file and directory access methods.
- 5. To make students familiar with the Process Synchronization & Deadlocks.
- 6. To understand I/O System, UNIX and Windows NT architecture.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Understand design issues associated with operating systems and comparison of different operating systems.
- 2. Understand concepts of memory management including virtual memory.
- 3. Handle issues related to file system, disk scheduling, management and associated Algorithms.
- 4. Understand protection and security mechanisms & operating system types including Unix and Windows NT.
- 5. Gain knowledge about various process management concepts including scheduling, synchronization and deadlocks.

MODULE CONTENT:

Unit-I: Introduction
Introduction to Operating System Concepts (including multitasking, multiprogramming, multi
user, multithreading etc.), Types of Operating Systems: Batch operating system, Time-sharing
systems, Distributed OS, Network OS, Real Time OS; Various Operating system services,
architecture, System programs and calls.
Unit–II: Process Management
Process concept, process scheduling, operation on processes; CPU scheduling, scheduling
criteria, scheduling algorithms: First Come First Serve (FCFS), Shortest Job-First (SJF),
Priority Scheduling, Round Robin (RR), Multilevel Queue Scheduling.
Unit–III: Memory Management
Logical & Physical Address Space, swapping, contiguous memory allocation, non-contiguous
memory allocation paging and segmentation techniques, segmentation with paging; Virtual
Memory Management: Demand Paging & Page-Replacement algorithms; Demand
Segmentation.
Unit–IV: File System
Different types of files and their access methods, directory structures, various allocation
methods, disk scheduling and management and its associated algorithms; Introduction to
distributed file system.
Unit–V: Process Synchronization
Classical Synchronization problems: Readers/Writers Problem, Producer and Consumer
problem, Critical Section Problem, Semaphores.

<u>Unit-VI: Deadlocks</u>

Critical Section Problems, semaphores; methods for handling deadlocks, deadlock prevention, avoidance & detection, deadlock recovery.

RECOMMENDED BOOKS:

TEXT BOOK	Operating System Concepts by Silberchatz et al, 5 th edition, 1998, Addison-Wesley					
REFERENCE	 Operating System By Peterson , 1985, AW. Operating System ByMilankovic, 1990, TMH. Operating System Incorporating With Unix & Windows By Colin Ritche, 1974, TMH. Operating Systems By Deitel, 1990, AWL. Operating Systems – Advanced Concepts By Mukesh Singhal, N.G. Shivaratri, 2003, T.M.H. 					

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	5
2.	Sessional Test	2	15
3.	Group Discussion	4	5
4.	End Semester Exam	1	75

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4	5
Class Test	Х	Х			Х
Quiz	Х		Х		Х
Assignment			Х	Х	

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes		2	1	3	4	5		3		1	

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Operating System Lab

L T P 0 0 2

MODULE CODE	CSEN2116
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To learn the fundamentals of Operating Systems Lab.
- 2. To learn commands of WINDOWS & Linux.
- 3. To learn various commands in UNIX.
- 4. To learn vi editor and its different modes.
- 5. To implement programs in shell.

LEARNING OUTCOMES

Following this course students will be able to:

- 1. Explain the objectives and functions of operating systems Lab.
- 2. Understand various commands of Operating System.
- 3. Understand difference between various types of OS commands.
- 4. Understand vi editor.
- 5. Make program using shell programming.

LIST OF EXPERIMENTS

1.	Study of Windows 2000 operating system.
2.	Administration of Windows 2000 operating system (including DNS, LDAP, Directory services).
3.	Study of LINUX operating system.
4.	Introduction to various commands in Unix.
5.	Study of directory related commands in Unix.
6.	Study of commands to perform operations on file in Unix.
7.	Study of process related and other commands in Unix.
8.	Study about vi editor and its different modes.
9.	Write a program in vi editor to find greatest of three number.
10.	Write a program in vi editor to find whether the given number is even or odd.
11.	Write a program in vi editor to find factorial of a given number.
12.	Write a program in vi editor to find number is prime or not.
Exper	iments based on advanced topics:
13.	Write a program in vi editor to find string is palindrome or not.
14.	Write a program in vi editor to generate Fibonacci series.

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes	1	1	3,4	5	1	2	1	5		2	

EVALUATION

At the end of semester, course faculty will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Design and Analysis of Algorithms

L T P 3 1 0

MODULE CODE	CSEN2117
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVE:

The aim of this subject is to understand and analyse efficient algorithms for various applications. Obtaining efficient algorithms is very important in modern computer engineering as the world wants applications to be time and space efficient.

- 1. Learn principles of algorithm and design.
- 2. Understand the algorithm analysis and estimate their worst-case and average-case behavior.
- 3. Get familiar with fundamental data structures and with the manner in which these data structures can best be implemented.
- 4. Learn how to apply their theoretical knowledge in practice (via the practical component of the course).

LEARNING OUTCOMES

After learning the course the students should be able to:

- 1. Analyze the asymptotic performance of algorithms.
- 2. Derive and solve recurrences describing the performance of divide-and-conquer algorithms.
- 3. Find optimal solution by applying various methods.

MODULE CONTENT:

UNIT-I: Introduction to Algorithms

Definition, algorithm vs program, complexity of algorithms, asymptotic notation.

Divide and Conquer: General method, binary search, merge sort, quick sort, selection sort, Strassen's matrix multiplication algorithms and analysis of algorithms for these problems.

UNIT-II: Greedy Method

General method, knapsack problem, job sequencing with deadlines, minimum spanning trees, single source paths and analysis of these problems.

UNIT-III: Dynamic Programming

General method, matrix chain multiplication, longest common subsequence, O/I knapsack, the traveling salesperson problem.

UNIT-IV: Back Tracking

General method, 8 queen's problem, graph coloring, Hamiltonian cycles, analysis of these problems.

UNIT-V: Branch and Bound

Method, O/I knapsack and traveling salesperson problem, efficiency considerations. Techniques for algebraic problems, some lower bounds on parallel computations.

UNIT-VI: Graph Searching and traversal

Overview, traversal methods (DFS, BFS), Trees: Binary search tree-traversal, insertion, deletion, B-tree, B⁺tress, NP Hard and NP Complete Problems: Basic concepts, Cook's theorem, NP hard graph and NP scheduling problems some simplified NP hard problems.

RECOMMENDED BOOKS:

TEXT BOOK	 Introduction to Algorithms, Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein, PHI. Fundamental of Computer algorithms, Ellis Horowitz an Sartaj Sahni,1978, Galgotia Publ. 					
REFERENCE	 The Design and Analysis of Computer Algorithm, Aho A.V. Hopcroft J.E., 1974, Addison Wesley. Algorithms-The Construction, Proof and Analysis of Programs, Berlion, P.Bizard, P., 1986. Johan Wiley & Sons. Writing Efficient Programs, Bentley, J.L., PHI. 					

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3

Assignment	Х		Х

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1			3	2	1		3			

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Algorithm Design Lab

L T P 0 0 2

MODULE CODE	CSEN2118
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To make student familiar with the paradigms and approaches used to analyze and design algorithms and to appreciate the impact of algorithm design in practice.
- 2. Learn how to devise correct and efficient algorithms for solving a given problem.
- 3. Understand the Greedy Method and how various problems can be solved using Greedy Strategy.
- 4. To implement divide and conquer strategy.
- 5. To make student familiar with Dynamic Programming, Back Tracking, Branch and Bound and how various problems can be solved using these techniques.

LEARNING OUTCOMES

Following this course, students will be able:

- 1. To learn good principles of algorithm design.
- 2. To develop data structures and describe the ways in which these data structures can best be implemented.
- 3. To describe the divide-and-conquer paradigm and explain when an algorithmic design situation calls for it.
- 4. To describe the greedy paradigm and explain when an algorithmic design situation calls for it.
- 5. To implement algorithms using dynamic-programming paradigm.

LIST OF EXPERIMENTS

1.	Sort a given set of elements using the Quick sort method and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read					
from a file or can be generated using the random number generator.						
2.	required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.					
3.	Obtain the Topological ordering of vertices in a given digraph.					
4.	From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.					
5.	Print all the nodes reachable from a given starting node in a digraph using BFS method.					
6.	Check whether a given graph is connected or not using DFS method.					
7.	Implement any scheme to find the optimal solution for the Traveling Salesperson problem and then solve the same problem instance using any approximation algorithm and determine the error in the approximation.					
8.	Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.					
9.	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.					
10.	Implement All-Pairs Shortest Paths Problem using Floyd's algorithm.					
Exp	Experiments based on advanced topics:					
11.	To implement N Queens problem using Backtracking.					
12.	Compute the transitive closure of a given directed graph using Warshall's algorithm.					

Note: At least 10 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

EVALUATION

At the end of semester, course faculty will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Multimedia Technologies

L T P 4 0 0

MODULE CODE	CSEN2119
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to understand about multimedia concepts like CD-ROM, JPEG, image processing, virtual reality and DVI technology which helps students to get practical knowledge in multimedia terms.

- 1. To formulate a working definition of interactive multimedia.
- 2. To demonstrate competence in using the authoring program Hyper Studio.
- 3. To demonstrate the use of animation, digitized sound, video control, and scanned images;
- 4. To use basic instructional design principles in the development of stacks; will develop conceptual maps of content and process for interactive multimedia instructional programs
- 5. Be motivated for the use of an interesting topic such as Virtual Reality.

LEARNING OUTCOMES:

- 1. Able to learn the different forms of communication like text, graphics, animation, audio, video etc.
- 2. Able to understand various image compression techniques and standards.
- 3. Able to know about different applications of multimedia.
- 4. Able to understand the concepts of virtual reality.
MODULE CONTENT:

<u>Unit-I</u>

Basics of Multimedia Technology: Computers, communication and entertainment; multimedia an introduction; framework for multimedia systems; multimedia devices; CD- Audio, CD-ROM, CD-I, presentation devices and the user interface; multimedia presentation and authoring; professional development tools.

<u>Unit-II</u>

LANs and multimedia; internet, World Wide Web & multimedia distribution network-ATM & ADSL; multimedia servers & databases; vector graphics; 3D graphics programs; animation techniques; shading; anti-aliasing; morphing; video on demand.

<u>Unit-III</u>

Image Compression & Standards: Making still images; editing and capturing images; scanning images; computer color models; color palettes; vector drawing; 3D drawing and rendering; JPEG-objectives and architecture; JPEG-DCT encoding and quantization, JPEG statistical coding, JPEG predictive lossless coding; JPEG performance; overview of other image file formats as GIF, TIFF, BMP, PNG etc.

<u>Unit-IV</u>

Audio & Video: Digital representation of sound; time domain sampled representation; method of encoding the analog signals; subband coding; fourier method; transmission of digital sound; digital audio signal processing; stereophonic & quadraphonic signal processing; editing sampled sound.

<u>Unit-V</u>

MPEG Audio; audio compression & decompression; brief survey of speech recognition and generation; audio synthesis; musical instrument digital interface; digital video and image compression; MPEG motion video compression standard; DVI technology; time base media representation and delivery.

<u>Unit-VI</u>

Virtual Reality: Applications of multimedia, intelligent multimedia system, desktop virtual reality, VR operating system, virtual environment displays and orientation making; visually coupled system requirements; intelligent VR software systems. Applications of environment in various fields.

RECOMMENDED BOOKS:

	1. Multimedia in Action by James E Shuman, 1997, Wadsworth
TEXT BOOKS	Publ.
	2. Multimedia in Practice by Jeff coate Judith, 1995, PHI.
	3. Multimedia Systems by Koegel, AWL.
	1. Multimedia Making it Work by Vaughar, etl.
REFERENCE	2. Multimedia Systems by John .F. Koegel, 2001, Buford.
	3. Multimedia Communications by Halsall & Fred, 2001, AW.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10

Course Learning Outcomes		2	1	3	4			3		1	

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER –IV

Natural Language Processing

L T P 4 0 0

MODULE CODE	CSEN2220
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to provide a sound understanding of Natural Language Processing and challenges involved in that area.

- 1. To provide the student with knowledge of various levels of analysis involved in NLP.
- 2. To understand language modeling.
- 3. To gain knowledge in automated natural language generation and machine translation.

LEARNING OUTCOMES

After successful completion of this course, students should be able to:

- 1. Outline Natural Language Processing tasks in syntax, semantics, and pragmatics.
- 2. Explain Morphology and Part of Speech Tagging.
- 3. Show how syntax parsing techniques can be used.
- 4. Explain the use of semantic analysis methods.
- 5. Relate a few applications of NLP.

MODULE CONTENT:

<u>UNIT- I : Overview and Language Modeling</u>

Overview: Origins and challenges of NLP-Language and Grammar-Processing Indian Languages-NLP Applications-Information Retrieval.

Language Modeling: Introduction-Various Grammar-based Language Models-Statistical Language Model

UNIT- II : Word Level Analysis and Syntactic Analysis

Word Level Analysis: Introduction- Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and correction-Words and Word classes-Part-of Speech Tagging.

Syntactic Analysis: Introduction-Context-free Grammar-Constituency Parsing-Probabilistic Parsing

UNIT- III : Semantic Analysis and Discourse Processing

Semantic Analysis: Introduction- Meaning Representation-Lexical Semantics Ambiguity-Word Sense Disambiguation.

Discourse Processing: Introduction- cohesion-Reference Resolution Discourse Coherence and Structure

UNIT-IV: Natural Language Generation and Machine Translation

Natural Language Generation: Introduction-Architecture of NLG Systems Generation Tasks and Representations-Application of NLG.

Machine Translation: Introduction-Problems in Machine Translation Characteristics of Indian Languages- Machine Translation Approaches-Translation involving Indian Languages

UNIT-V: Information Retrieval

Introduction-Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval - Evaluation

LEXICAL RESOURCES: Introduction-WordNet-FrameNet-Stemmers-POS Tagger Research Corpora

<u>UNIT- VI: Case Study</u> Generation - Strategies for generation - Planning English referring expressions -KING, a Natural language generation systems. Typical systems - ELIZA - Baseball - GLJS - PARRY - LADDER - SOPGIE & POET current trends in NLP.

RECOMMENDED BOOKS:

TEXT BOOK	1. Natural Language Processing and Information Retrieval by

The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Digital Signal Speech Processing

L T P 4 0 0

MODULE CODE	CSEN2221
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. To provide adequate knowledge about various signals and filter used in signal and speech processing.
- 2. To cater the knowledge of digital signal speech processing for controlling real time systems.
- 3. To learn about the different algorithms used in speech processing.
- 4. To learn about the latest applications like speech, image, seismic, medical and other areas.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Understand the basic fundamental of digital signal speech processing.
- 2. Design IIR and FIR filters.
- 3. Understand algorithms used in digital signal speech processing.
- 4. Innovate new ideas and applications used in research.

MODULE CONTENT:

UNIT-I: Introduction

Digital signals and their properties, review of human speech and acoustic theory, nature of sound, harmonics, resonance measurement, virtual display, music theory, pitch, duration, intervals, rhythm, human speech production, the vocal tract, the Larynx, the source filter.

UNIT-II: Signal Processing

Review of filter design. Signal processing-the phasor mode, fourier transfer, DFT, FFT. The hardware use of FIR & IIR filters linear phase FIR filters, Fundamental of Digital Filters, FIR system, IIR Systems, methods of FIR and IIR filter design.

UNIT-III: Speech Processing

The Fundamentals of Digital Speech Processing, Review of Discrete-Time Signal & Systems, the Z-transform, model of speech modulation, short time spectral analysis/transform, channel vocodor, homomorphic speech processing MMSE Criterion.

UNIT-IV: Algorithm

LMS algorithms, recursive least square algorithms for FIR filters and lattice ladder, elements of speech synthesis-speech recognition-speech in the computer-human interface

UNIT-V: Digital Representation of speech Waveform

Sampling speech signals, statistical model, Instantaneous quantization, Instantaneous, companding, quantization for optimum SNR, Adaptive quantization, Feed-forward Feedback adaptions.

UNIT-VI: Applications

Applications of FIR & IIR filters in speech, image, seismic, medical and other areas, Applications of speech and image processing.

RECOMMENDED BOOKS:

TEXT BOOK	1. Digital Signal Processing - by Proakis & Manolakis
REFERENCE	 Speech and Audio Processing for multimedia PC's - by Iain Murray. An Introduction with MATLAB and Applications-by Zahir M. Hussain, Amin Z. Sadik Peter O'Shea.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark

Program Outcomes	а	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1,2	3	3,5	4	2	2,3	2,4	5			

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Soft Computing

L T P 4 0 0

MODULE CODE	CSEN2222
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to teach student's concept Artificial Neural Networks, how it is related to biological neural networks and how it is implemented and to understand Fuzzy logic's concepts.

- 1. To familiarize with soft computing concepts.
- 2. To introduce the ideas of neural networks, fuzzy logic and use of heuristics based on human experience.
- 3. To introduce the concepts of Genetic algorithm and its applications to soft computing using some applications.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Apply various Soft Computing frame works.
- 2. Design various neural networks.
- 3. Understand the use of Fuzzy Logic.
- 4. Apply genetic programming.
- 5. Understand hybrid soft computing.

MODULE CONTENT:

Unit I : Artificial Neural Network

Introduction, Fundamental concept, Evolution of Neural Networks, Basic Models of Artificial Neural Networks, Important Terminologies of ANNs, McCulloch, Pitts Neuron, Linear Separability, Hebb Network. Supervised Learning Network: Perceptron Networks, Adaline, Multiple Adaptive Linear Neurons, Back Propagation Network, Radial Basis Function Network.

UNIT II: Associative Memory

Associative Memory Networks: Training Algorithms for Pattern Association, Autoassociative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory, Hopfield Networks, Iterative Auto-associative Memory Networks, Temporal Associative Memory Network.

<u>UNIT III: Unsupervised Learning Networks:</u> Fixed weight Competitive Nets, Kohonen, Selforganizing Feature Maps, Learning Vector Quantization, Counter propagation Networks, Adaptive Resonance Theory Networks, Special Networks.

UNIT IV: Fuzzy Set Theory

Introduction to Classical Sets and Fuzzy sets, Classical Relations and Fuzzy Relations, Tolerance and Equivalence Relations, Non interactive Fuzzy sets, Membership Functions: Fuzzification, Methods of Membership Value Assignments, Defuzzification, Lambda, Cuts for Fuzzy sets and Fuzzy Relations, Defuzzification Methods.

UNIT V: Fuzzy Arithmetic and Fuzzy Measures

Fuzzy Arithmetic and Fuzzy Measures: Fuzzy Rule Base and Approximate Reasoning: Truth values and Tables in Fuzzy logic, Fuzzy Propositions, Formation of Rules, Decomposition and Aggregation of rules, Fuzzy Reasoning, Fuzzy Inference Systems (FIS), Fuzzy Decision Making, Fuzzy Logic Control Systems.

UNIT VI: Hybrid Fuzzy

Genetic Algorithm based Internet Search Technique, Soft Computing based Hybrid Fuzzy Controllers, Soft Computing based Rocket Engine, Control.

RECOMMENDED BOOKS:

TEXT BOOK	1. Principles of Soft Computing, by S.N. Sivanandan and S.N. Deepa, Wiley India, 2007. ISBN: 10: 81,265,1075,7.
REFERENCE	 Neural Networks, Fuzzy Logic and Genetic Algorithms by S. Rajasekaran and G.A.V.Pai, PHI, 2003. Fuzzy Logic with Engineering Applications by Timothy J.Ross, , McGraw Hill, 1997. Neuro, Fuzzy and Soft Computing by J.S.R. Jang, C.T. Sun and E.Mizutani, PHI, 2004, Pearson Education.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4	5
Class Test	Х		Х		Х
Quiz		Х	Х

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes		2	1	3	4	5		3		1	

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

• Problems encountered in the content delivery;

- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

Fuzzy Logic

L T P 4 0 0

MODULE CODE	CSEN2223
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. To cater the knowledge of Fuzzy Logic Control and use these for controlling real time systems.
- 2. To provide adequate knowledge of application of fuzzy logic control to real time systems.
- 3. To provide comprehensive knowledge of fuzzy logic control
- 4. To learn about the adaptive fuzzy logic and to design the fuzzy control using genetic algorithm.
- 5. To learn about the concept of fuzziness involved in various systems.
- 6. To provide adequate knowledge about fuzzy set theory.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Understanding principles of fuzzy logic fundamentals.
- 2. Design the required and related systems.
- 3. Implement various fuzzy operations.
- 4. Attempt to generate new ideas and innovations in fuzzy logic and fuzzy system.

MODULE CONTENT:

UNIT-I: Fuzzy Sets and Uncertainty

Uncertainty and information, fuzzy sets and membership functions, chance verses fuzziness, properties of fuzzy sets, fuzzy set operations.

UNIT-II: Fuzzy Relations

Cardinality, operations, properties, fuzzy cartesian product and composition, fuzzy tolerance and equivalence relations, forms of composition operation.

UNIT-III: Fuzzification and Defuzzification

Fuzzification and Defuzzification: Various forms of membership functions, fuzzification, defuzzification to crisp sets and scalars.

UNIT-IV: Fuzzy Logic and Fuzzy Systems

Introduction to fuzzy systems, classic and fuzzy logic, approximate reasoning, Natural language, linguistic hedges, fuzzy rule based systems, graphical technique of inference.

UNIT-V: Development of membership functions

Membership functions, membership value assignments, intuition, inference, rank ordering, neural networks, genetic algorithms, inductive reasoning..

UNIT-VI: Fuzzy Arithmetic and Extension Principle

Fuzzy arithmetic and extension principle, functions of fuzzy sets, extension principle, fuzzy mapping, interval analysis, vertex method and DSW algorithm.

RECOMMENDED BOOKS:

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER –IV

Global Positioning System

L T P 4 0 0

MODULE CODE	CSEN2224
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVE:

The aim of the subject is to introduce the principles of the Global Positioning System and to demonstrate its application to various aspects of Earth Sciences.

- 1. To understand high precision positioning on regional and global scales.
- 2. To make students familiar towards engineering applications of Kinematic Positioning with GPS.
- 3. To teach the implementation of moving objects with slightly less accuracy.
- 4. To make students familiar with basic limitations of the system.
- 5. To make students familiar with some algorithms to extend its application to areas not yet fully explored.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Understand Global Positioning system's basic functionality.
- 2. Learn different GPS Observables like SA/AS, RINEX.
- 3. Handle different GPS error sources like Clock error.
- 4. Understand GPS orbit and satellite positioning.
- 5. Understand mathematical model of GPS observables.

MODULE CONTENT:

UNIT-I: Overview of GPS

Basic concepts, system architecture, space segment, user segment, GPS aided Geo-augmented navigation (GAGAN) architecture. Definition of global and local coordinate systems, Relationship between satellite and conventional geodetic systems.

UNIT-II: GPS Signals

Signal structure, anti-spoofing (AS), selective availability, difference between GPS and GALILEO satellite construction, GPS coordinate frames, Time references: Geodetic and Geo centric coordinate systems, ECEF coordinates, world geodetic 1984 (WGS 84), GPS time.

UNIT-III: Satellite orbital motions

Description of motions, Forces acting on the satellites, Satellite NAV messages, Pseudo ranges, Carrier phases

UNIT-IV: GPS Survey Methods & GPS Modernization plans

GPS Survey Methods: Single Point or Point Vs Relative, Static Vs Kinematic, Real time Vs Post mission. Preparation of GPS surveys: Setting up an observation plan, Practical aspects of field observations, Observation strategies, Network design. GPS Modernization plans:

Future developments in GPS, Introduction to GLONASS and GALILEO systems.

UNIT-V: GPS Errors

GPS Errors, GPS error sources – clock error, ionospheric error, tropospheric error, multipath, ionospheric error estimation using dual frequency GPS receiver. Propagation medium: Troposphere, Ionosphere, Multipath.

UNIT-VI: Mathematical model of GPS observables

Basic theory of contributions that need to be included for millimetre level global positioning, Use of differencing, differential position, Wide-lanes and use in kinematic positioning, Available software, Available data set, International GPS Service (IGS), Cycle slip fixing/Bias resolution, Kinematic (moving receiver) GPS processing, Relationship between satellite and conventional geodetic systems.

RECOMMENDED BOOKS:

TEXT BOOK	1. GPS System: Technology, Operation, and applications by Ben							
	levitan, Lawrence harte.							
REFERENCE	 Global Positioning System: Theory and Applications. By Parkinson, B. W., J. Spilker, et al. Vol. 1. American Institute of Aeronautics &Ast, 1996. ISBN: 9781563471063. EVALUATION:

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - IV

System Programming

L T P 4 0 0

MODULE CODE	CSEN2225
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

- 1. To be familiar with System Software and Language Processors.
- 2. To be familiar with system programming tools like linker, loader, assembler, compiler and macro processor etc.
- 3. To be familiar with Basic concepts of Scanning and Parsing.
- 4. To be familiar with Interpreters and Debuggers.

LEARNING OUTCOMES

After completing this course the student must demonstrate the knowledge and ability to:

- 1. Independently understand basic concepts of system software.
- 2. Understand and explain the system programming tools.
- 3. Understand the design of Assembler and explain the types of assemblers.
- 4. Identify the various types of Parsing technique.
- 5. Understand the concepts of Compiler, Interpreters, and Debuggers.

MODULE CONTENT:

UNIT-I: Overview of System Software and Language Processors

Overview of System Software: Introduction, Software, Software Hierarchy, Systems Programming, Machine Structure, Interfaces, Address Space, Computer Languages, Tools, Life Cycle of a Source Program, Different Views on the Meaning of a Program, System Software Development, Recent Trends in Software Development, Levels of System Software *Overview of Language Processors:* Programming Languages and Language Processors, Language Processing Activities, Program Execution, Fundamental of Language Processing, Symbol Tables Data Structures for Language Processing: Search Data structures, Allocation Data Structures.

UNIT-II: Assemblers, Macro and Macro Processors

Assemblers: Elements of Assembly Language Programming, Design of the Assembler, Assembler Design Criteria, Types of Assemblers, Two-Pass Assemblers, One-Pass Assemblers, Single pass Assembler for Intel x86 Algorithm of Single Pass Assembler, Multi-Pass Assemblers, Advanced Assembly Process, Variants of Assemblers Design of two pass assembler.

Macro and Macro Processors: Introduction, Macro Definition and Call, Macro Expansion, Nested Macro calls, Advanced Macro Facilities, Design Of a Macro Pre-processor, design f a Macro Assembler, Functions of a Macro Processor, Basic Tasks of a Macro Processor, Design Issues of Macro Processors, Features, Macro Processor Design Options, Two-Pass Macro Processors, One-Pass Macro Processors.

UNIT-III: Linkers and Loaders

Introduction, Relocation of Linking Concept, Design of a Linker, Self-Relocating Programs, Linking in MSDOS, Linking of Overlay Structured Programs, Dynamic Linking, Loaders, Different Loading Schemes, Sequential and Direct Loaders, Compile-and-Go Loaders, General Loader Schemes, Absolute Loaders, Relocating Loaders, Practical Relocating Loaders, Linking Loaders, Relocating Linking Loaders.

UNIT-IV: Scanning and Parsing

Programming Language Grammars, Classification of Grammar, Ambiguity in Grammatic Specification, Scanning, Parsing, Top Down Parsing, Bottom up Parsing, Language Processor Development Tools, LEX, YACC.

UNIT-V: Compilers

Causes of Large Semantic Gap, Binding and Binding Times, Data Structure used in Compiling, Scope Rules, Memory Allocation, Compilation of Expression, Compilation of Control Structure, Code Optimization.

UNIT-VI: Interpreters & Debuggers

Benefits of Interpretation, Overview of Interpretation, The Java Language Environment, Java Virtual Machine, Types of Errors, Debugging Procedures, Classification of Debuggers, Dynamic/Interactive Debugger.

RECOMMENDED BOOKS:

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. Build an understanding of the fundamental concepts of computer networking.
- 2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
- 3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
- 4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Independently understand basic computer network technology.
- 2. Understand and explain Data Communications System and its components.
- 3. Identify the different types of network topologies and protocols.
- 4. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer.
- 5. Identify the different types of network devices and their functions within a network.

MODULE CONTENT:

UNIT-I: Introduction to Computer Networks

Computer Networks and its applications, ARPANET, Network Topologies, Types of Networks, Layering architecture of networks, OSI and TCP/IP model -functions, services and protocols of each layer.

UNIT-II: The Physical Layer

Transmission media: Guided and Unguided media, Switching, Multiplexing (FDM, WDM, and TDM).

UNIT-III: The Data Link Layer

Data link layer design issues, Error detection and Correction Techniques, Elementary data link control protocols, sliding window protocols.

UNIT-IV: The Medium Access Sub layer

The channel allocation problem, multiple access protocols, IEEE 802 standards for LANs, Network devices-repeaters, hubs, bridge, switches, routers and gateways.

UNIT-V: The Network Layer

Network layer design issues, routing algorithms, congestion control algorithms, Quality of Service, Introduction to IPv4 Addressing, Sub networks and Subneting, IPv4 protocol Packet Format, IPv4 vs IPv6.

UNIT-VI: Transport layer & Application Layer

Transport layer services, Elements of transport protocols, Overview of TCP and UDP, Domain Name System, Email – SMTP, POP, IMAP; FTP, HTTP.

RECOMMENDED BOOKS:

- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Computer Networks Lab

L T P 0 0 2

MODULE CODE	CSEN3102
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To introduce the key concepts and principles of computer networks.
- 2. To implement the deployment of communications services in practical networks.
- 3. To study about CISCO Packet Tracer Stimulation Tool.
- 4. To study the advanced background on relevant computer networking topics to have a comprehensive and deep knowledge in computer networks.

LEARNING OUTCOMES

Following this course, students will be able:

- 1. To get the concepts of Data Communication and Networking.
- 2. To get the knowledge of different trouble shooting commands.
- 3. To learn about the resource sharing.
- 4. To create a VLAN and star topology.
- 5. To configure a network using routing protocols.

LIST OF EXPERIMENTS

1.	Study of computer network and interconnected devices.
2.	To study about trouble shooting commands.
3.	To study about IPconfig and net stat commands.
4.	To study about IPV4 and IPV6.
5.	To study about File and desktop Sharing.
6.	Connect the computers in LAN.
7.	To study about CISCO Packet Tracer Stimulation Tool.
8.	Configure a network topology using packet tracer software.
9.	To create a LAN via switches and transfer packets between them.
10.	Activity to create a VLAN and star topology.
11.	Configure a network using distance vector routing protocol.
12.	Configure a network using link state routing protocol.
Experin	nents based on advanced topics:
13.	Study of different types of network cables and practically implement crosswire and straight cable.
14.	Write a Program in C++ to check the whether a 32-bit IP address is in binary notation or not and determine its class.

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

SEMESTER - V

Computer Graphics

L T P 3 1 0

MODULE CODE	CSEN3103
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to provide keen knowledge graphics by understanding 2-D, 3-D transformations and scan conversions.

- 1. To make students familiar with the wide variety of examples and applications of computer graphics
- 2. To make students familiar with an understanding of the line & circle drawing algorithms and various clipping algorithms
- 3. To make students familiar with an understanding of the 2-D and 3-D transformations
- 4. Understand the concepts of visible surface algorithms, shading and mapping

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Write functions to implement graphics primitives.
- 2. Write programs that demonstrate geometrical transformations.
- 3. Work with software used in computer graphics.
- 4. Implement 2D graphics and algorithms including line drawing, polygon filling, clipping, and transformations.
- 5. Develop techniques used in 3D computer graphics, including viewing transformations, hierarchical modeling, color, lighting and texture mapping.

MODULE CONTENT:

Unit-I: Introduction to Computer Graphics

What is Computer Graphics, Computer Graphics Applications, Computer Graphics Hardware and software, Random scan displays, Raster scan displays.

Unit-II: Scan Conversions

Points and Lines, Line drawing algorithms: DDA, Bresenham's; Circle drawing algorithms: Using polar coordinates, Bresenham's circle drawing, mid-point circle drawing algorithm; Filled area algorithms.

Unit-III: Clipping and 2D Viewing

Cohen Sutherland, Cyrus Beck, Midpoint Subdivision, Liang-Barsky, Nicholl-Lee-Nicholl ,Polygon clipping -Sutherland Hodgman, Weiler Atherton, Polygon Filling-Seed fill, Scanline Approach Anti-Aliasing: Un-Weighted and Weighted Area Sampling, Gupta-Sproull Algorithm for Anti-Aliasing.

Unit-IV: Two/Three Dimensional Transformations

Two dimensional transformations: transformations, translation, scaling, rotation, reflection, composite transformation. Three dimensional graphics concept, Matrix representation of 3-D Transformations, Composition of 3-D transformation. Viewing in 3D: Projections, types of projections, the mathematics of planner geometric projections, coordinate systems.

Unit-V: Hidden surface removal

Introduction to hidden surface removal. The Z- buffer algorithm, scanline algorithm, area subdivision algorithm. Representing Curves and Surfaces: Parametric representation of curves: Bezier curves, B-Spline curves. Parametric representation of surfaces; Interpolation method.3

Unit-VI: Basic illumination models

Ambient light, Diffuse reflection, Specular reflection and Phong model, Combined approach, Warn model, Intensity Attenuation, Color consideration, Transparency and Shadows, What is an image? Filtering, image processing, geometric transformation of image.

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	а	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes		1	2	2,3	3	4,5					

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Computer Graphics Lab

L T P 0 0 2

MODULE CODE	CSEN3104
CREDIT POINTS	1
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	25
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To understand and implement graphics architectures and software.
- 2. To make students familiar with color models (RGB, CMY, HLS) & color transformations.
- 3. To teach the implementation of Geometric transformations.
- 4. To make students familiar with shading models.
- 5. To implement line drawing via Bresenham's algorithm, clipping and polygonal fill.

LEARNING OUTCOMES

Following this course, students will be able:

- 1. To understand the core concepts of computer graphics.
- 2. To understand different algorithms supporting computer graphics.
- 3. To design and implement models of surfaces, lights, and textures.
- 4. To select among models for lighting/shading.
- 5. To design and implement model and viewing transformations.

LIST OF EXPERIMENTS

1.	To study basic graphic functions defined in 'graphics.h'.				
2.	Write a menu driven program to draw a line, circle or rectangle.				
3.	Write a program to draw a hut using basic graphic functions.				
4.	Write a program in 'C' to draw a line using DDA.				
5.	To draw a line using Bresenham's algorithm.				
6.	To draw a circle using Bresenham's algorithm.				
7.	To draw circle using mid-point algorithm.				
8.	Write a program to move a character above and below a line.				
9.	Write a program for flood fill.				
10.	Write a program to fly a kite.				
11.	Write a program to design a clock.				
12.	Write a program in 'C' to demonstrate 2-D translation of a triangle.				
Experiments based on advanced topics:					
13.	Write a program in 'C' to demonstrate 2-D scaling of a triangle.				
14.	To make a traffic light signalling system in 'C'.				

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 100 marks for practical.

Practical:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1	Internal Assessment	2	25
2	External Assessment	1	25

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	3	1,2	4		5	4	1,2	4,5	1,5		

EVALUATION

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.
SEMESTER - V

Theory of Automata & Computation

L T P 3 1 0

MODULE CODE	CSEN3105
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to clear the concepts of formal languages and to provide keen knowledge of computation using Turing Machine.

- 5. Identify different formal language classes and their relationships.
- 6. Design grammars and recognizers for different formal languages.
- 7. Determine the decidability and intractability of computational problems.
- 8. Present the theory of automata as the first step towards learning advanced topics such as compiler design.
- 9. Develop the understanding of computation using Turing Machine.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Design and analyse automata, regular expressions and context-free grammars accepting or generating a certain languages
- 2. Define Turing machines performing simple tasks
- 3. Apply mathematical and formal techniques for solving problems in computer science.
- 4. Define formal languages and explain how they can be generated by different automata.
- 5. Create an automaton to solve a particular computational problem.

MODULE CONTENT:

Unit-I: Finite Automata

Finite State Machines, Properties and limitations of FSM, Basic Definitions of Non-Deterministic finite automata (NDFA), Deterministic finite automata (DFA), Equivalence of DFA and NDFA, finite automata with epsilon transitions.

Unit-II: Introduction to Machines & Formal languages

Concept of basic Machine, Moore and mealy Machines, Equivalence of Moore and Mealy machines. Formal Grammar's Introduction, Language recognition by the given Grammar, Creation of Grammar for particular language, Recursive & Recursive Enumerable Language, Chomsky hierarchies of grammars, unrestricted grammars, Context sensitive languages, Relation between Languages.

Unit-III: Regular Expressions & Regular Sets

Regular Expressions, Equivalence of finite automata and Regular Expressions, Regular expression conversion and vice versa. State and prove Arden's Method.

The Pumping Lemma for Regular Sets, Applications of the pumping lemma, Closure properties of regular sets, Myhill-Nerode Theorem and minimization of finite Automata, Minimization Algorithm.

Unit-IV: Grammars

Definition, Context free and Context sensitive grammar, Ambiguity of regular grammar, Reduced forms, Removal of useless Symbols, Normal forms for grammar Chomsky Normal Form (CNF), Griebach Normal Form (GNF).

Unit-V: Pushdown Automata

Introduction to Pushdown Machines, Designing of PDA, Application of Pushdown Machines, equivalence of CFL and PDA, inter conversion.

Unit-VI: Turing Machines

Turing machine, Programming techniques for Turing machine, Design of T.M, Multi-tape T.M., Universal Turing Machine, Halting problem of T.M., PCP Problem, Decidability & undecidability of Problems.

RECOMMENDED BOOKS:

ТЕХТ ВООК	Automata theory, language & computations by Hopcroaft & O.D.Ullman, RMothwani, 2001, AW.
REFERENCE	 Automata, Languages and computation by K.L.P.Mishra & N.Chandrasekaran, 2000, PHI. Introduction to formal Languages & Automata by Peter Linz, 2001, Narosa Publ. Principles and Practice by Ramond Greenlaw and H. James Hoover, 1998, for "Fundamentals of the Theory of Computation" Introduction to languages and the Theory of Computation by John C. Martin 2003, T.M.H.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Assessments	1	2	3	4	5
Class Test		Х	Х	Х	Х
Quiz	Х	Х			
Assignment	Х		Х	Х	

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1	2		4,5	3	4	2	2	4		

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER – V

Mobile Application Development

L T P 4 0 0

MODULE CODE	CSEN3208
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how mobile communication works and how to build mobile apps for android operating system.

- 1. To develop application models of mobile application frameworks.
- 2. To understand User-interface design for mobile applications.
- 3. To understand how to manage application data.
- 4. To understand addressing enterprise requirements in mobile applications performance, scalability, modifiability, availability and security.
- 5. To use current mobile platforms and their architectures.

LEARNING OUTCOMES:

Following this course student will be able to:

- 1. Explain functioning of different mobile technology.
- 2. Demonstrate android activities life cycle.
- 3. Execute operations on GUI objects.
- 4. Perform event driven programming.
- 5. Develop mobile systems with dynamically varying sensor setup using goal oriented cooperative sensing.

MODULE CONTENT:

UNIT-I: Introduction To Mobile Computing
Concept of Mobile Communication, Mobile devices vs. desktop devices, ARM and INTEL
architectures, Power Management, Screen resolution, Touch interfaces, Application
deployment (App Store, Google Play, Windows Store) Native vs. web applications.
UNIT-II: Frameworks and Tools
Development Environments: Development Environments (XCode, Eclipse, VS2012, Phone
GAP, etc.) Development Tools (HTML5, CSS, JavaScript, JQuery) Mobile-specific
enhancements (Browser-detection, Touch interfaces, Geo location, Screen orientation) Mobile
browser "interpretations" (Chrome/Safari/Gecko/IE).
UNIT-III: Mobile OS Architectures
Mobile OS Architectures (Android, iOS, Windows), Mobile OS (Darwin, Linux, Windows)
Runtime Environments (Objective-C, Dalvik, winRT), Mobile Agents and Peer-to-Peer
Architecture.
Hardware Architecture: Introduction to the processors used for Mobile and Handheld devices
and SoC architecture like OMAP and Snap Dragon and its case study with reference to
protocols, Input and output interfaces, GPU, DSP etc.
UNIT-IV: Introduction to Android
Overview of Android, Environment setup for Android apps Development, Framework
Android SDK, Eclipse, Emulators, Android AVD, Android Emulation Creation and set up
First Android Application.
UNIT-V: Developing an Application
Building a simple "Hello World" App (Android, iOS, Windows) App-structure, built-in
Controls, file access, basic graphics, Building useful apps, Database, Network, File access
Packaging and Deployment.
UNIT-VI: Advanced UI Programming
System-level Apps, Native programming (Android), Low-level programming (iOS), Low-
level APIs (Windows).

RECOMMENDED BOOKS:

TEXT BOOK	1. Programming Mobile Devices: An Introduction for Practitioners by						
	Tommi Mikkonen, John Wiley & Sons Ltd, 2007.						
REFERENCE	 Building Android Apps IN EASY STEPS, McGrawHill Education. Mobile Python Rapid Prototyping of Applications on the Mobile Platform by J Scheible and Ville Tuulos John, Wiley India Pvt. Ltd, 2008. Ubiquitous Computing: Smart Devices, Environments and Interactions by S. Poslad, Wiley, 2009. Mobile Computing Principles: Designing and Developing Mobile Applications with UML and XML by Reza Behravanfar, Cambridge University Press, October, 2004. Fundamentals of Mobile and Pervasive Computing by Adelstein, Frank, Gupta, Sandeep KS, Richard III, Golden, Schwiebert, Loren, McGraw-Hill Professional, 2005. 						

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark

Course Learning		1	2	23	r	15					
Outcomes		1	2	2,5	5	ч,5					

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Big Data Analysis

L T P 4 0 0

MODULE CODE	CSEN3209
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The course provides practical foundation level training that enables immediate and effective participation in Big Data Projects. The course provides grounding in basic and advanced methods to Big Data technology and tools including MapReduce and Hadoop.

- 1. To develop in –Depth Knowledge and understanding of the Big Data analytic domain.
- 2. To understand the computational approaches to Modelling, Feature Extraction.
- 3. To understand the various search algorithms applicable to Big Data.
- 4. To analyse and interpret Streaming data.
- 5. To learn how to handle large datasets in main memory.
- 6. Use advanced analytical tools, decision making tools and operation research techniques to analyse complex problems.

LEARNING OUTCOMES:

Upon completion of this course student will be able to:

- 1. Design algorithm by employing Map Reduce technique for solving Big Data problems.
- 2. Design algorithms for handling petabytes of datasets.
- 3. Design algorithm and propose solutions for Big Data by optimizing main memory consumption.
- 4. Design and build MongoDB based Big Data applications and learn MongoDB query language.
- 5. Learn difference between conventional SQL query language and NoSQL basic concepts.

MODULE CONTENT:

UNIT-I: Introduction to Big data

Introduction to Big Data and its importance, Big Data characteristics, types of Big Data, Traditional vs. Big Data business approach, Four Vs, Drivers for Big Data, Big data Analytics, Algorithm Using Map reduce ,Matrix –Vector Multiplication by Map-Reduce .

UNIT-II: Introduction to Hadoop and Hadoop Architecture

What is Hadoop? Core Hadoop Components, Hadoop Eco system –Moving Data In and Out of Hadoop, Hadoop Limitations, Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands, Anatomy of File Write and Read, Name Node, Secondary Name Node, and Data Node, Hadoop MapReduce paradigm, Map and Reduce tasks, Job, Task trackers.

UNIT-III: NoSQL

What is it? Where it is Used Types of NoSQL databases, Why NoSQL? Advantages of NoSQL, Use of NoSQL in Industry, SQL vs NoSQL, NewSQL.

UNIT-IV: HDFS, HIVE AND HIVEQL, HBASE

Overview, Installation and Shell, Java API; Hive Architecture and Installation, Comparison with Traditional Database, HiveQL Querying Data, Sorting And Aggregating, Map Reduce Scripts, Joins & Sub queries, HBase concepts, Advanced Usage, Schema Design, Advance Indexing, PIG, Zookeeper, how it helps in monitoring a cluster, HBase uses Zookeeper and how to Build Applications with Zookeeper.

UNIT-V: SPARK

Introduction to Data Analysis with Spark, Downloading Spark and Getting Started, Programming with RDDs, Machine Learning with MLlib.

UNIT-VI: Data Base for the Modern Web

Introduction to MongoDB key features, Core Server tools, MongoDB through the JavaScript's Shell, Creating and Querying through Indexes, Document- Oriented, principles of schema design, Constructing queries on Databases, collections and Documents, MongoDB Query Language.

RECOMMENDED BOOKS:

TEXT BOOK	1. Understanding Big data by Chris Eaton, Dirk deroos et al. McGraw Hill, 2012.
REFERENCE	 Professional Hadoop Solutions by Boris lublinsky, Kevin t. Smith, Alexey Yakubovich, Wiley, 2015. HADOOP: The definitive Guide by Tom White, O Reilly 2012. Big Data Analytics with R and Haoop by Vignesh Prajapati, Packet Publishing 2013. Big Data and Business analytics by Jy Liebowitz , CRC press, 2013. MongoDB in Action by Kyle Banker, Piter Bakkum , Shaun Verch, Dream tech Press. BIG Data and Analytics by Sima Acharya, Subhashini Chhellappan, Willey.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

Course Learning Outcomes	1	1,2	3	4	5						

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Cognitive Networks

L T P 4 0 0

MODULE CODE	CSEN3210
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how to design, a network with a cognitive process that can perceive current network conditions, plan, decide, act on those conditions, learn from the consequences of its actions, all while following end-to-end goals

- 1. To teach the behavior of basic network to achieve some common user-defined objectives.
- 2. To understand tangled problems emerging from throughput-demanding services.
- 3. To make students familiar with basic issues incorporating intelligence to network functions.
- 4. To make students familiar with communication and learning using modern technology.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Learn various design principles of software defined radio.
- 2. Understand challenges of receiver design.
- 3. Select hardware for SDR.
- 4. Understand the basic architecture of cognitive radio.
- 5. Study various techniques like spectrum sensing and spectrum analysis.

MODULE CONTENT:

UNIT-I: Biologically Inspired Networking

Introduction, Principles of Biologically inspired networks, Swarm Intelligence, Evolutionary and Adaptive systems, The Role of Autonomic Networking in Cognitive Networks: Fundamentals of autonomic computing, The FOCALE Architecture, Application to Wired and wireless Cognitive Networks

UNIT-II: Adaptive Networks

Dynamic factors, Network functions, Representative Adaption Techniques, Self-Managing Networks: Vision and challenges of Self-Management, Designing Self-Management networks, Self-Management Intelligence

UNIT-III: Machine Learning for Cognitive Networks

Problem formulation in Machine Learning, Open issues and Research Challenges, Cross-Layer Design and Optimization in Wireless Networks Cross-Layer Design: design, taxonomy and implementation; Open Challenges.

UNIT-IV: Cognitive Radio Architecture

Function, Components and Design Rules, The cognition cycle, Building the CRA on SDR Architecture, Cognitive Ad hoc Networks: Cognitive Ad Hoc Networks, wisdom of crowds, Scenarios for cognitive Ad Hoc Networks.

UNIT-V: : Distributed Learning and Reasoning in Cognitive Networks

Methods and Design Decisions: Framework for Learning and reasoning, Distributed Learning, Sensory and Actuator Functions, The Semantic Side of Cognitive Radio: Formal semantics and semantic web technologies, Community Architecture for Cognitive radio and imperative semantics, Architecture for Cognitive radio Applications,

UNIT-VI: Security Issues and intrusion detection

Cognitive Radio Networks, Communication Security, and Attacks on Cognitive Networks, Intrusion Detection, Threat Model, Integrated dynamic security approach, Erasure Tolerant Coding for Cognitive Radios: Spectrum pooling concepts, Overview of Erasure Channels, traditional Erasure codes, Digital fountain Codes, Multiple Description Codes.

RECOMMENDED BOOKS:

ТЕХТ ВООК	 Cognitive Networks: Towards Self-Aware Networks by Qusay Mahmoud, John Wiley & Sons. Cognitive Radio, Software Defined Radio, and Adaptive Wireless Systems by Husevin Arslan, Springer
REFERENCE	 Cognitive Wireless Networks by Frank H. P. Fitzek, Springer. Software Radio: A Modern Approach to Radio Engineering by Jeffrey H. Reed Pearson Education.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. SEMESTER – V

Cryptography

L T P 4 0 0

MODULE CODE	CSEN3211
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students how to preserve information properties through different techniques.

- 1. Recognize the need for security through cryptography
- 2. Identify the primitives of various cryptographic techniques and the related application areas.
- 3. Explore the various types of cryptography and the associated application areas
- 4. To understand practical concepts related to Cryptography.
- 5. To understand practical concepts related to Steganography.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Understand basic issues of security in communication and computing.
- 2. Learn basic approaches in solving security problems.
- 3. Identify different Cryptography techniques.
- 4. Compare and contrast Symmetric and Asymmetric encryption system and their vulnerability to attacks.
- 5. Understand different Steganographic Techniques.

MODULE CONTENT:

Unit I: Security

Need of security: Security attacks: vulnerabilities, threats, types of attacks and controls; Security services; Security mechanisms; Model of network security.

Unit II: Cryptography: Concepts and Techniques

Cryptography: plain text and cipher text, substitution techniques, transposition techniques; Substitution techniques: caesar cipher, modified version of caesar cipher, mono-alphabetic cipher, homophonic substitution cipher, polygram substitution cipher, polyalphabetic substitution cipher, hill cipher; Transposition techniques: rail fence technique, simple columnar transposition technique, vernam cipher, block cipher; Encryption and decryptionders(ISPs), Internet address, standard address, domain name, DNS, IP.v6, Modems and time continuum, communications software; internet tools.

Unit III: Symmetric Key Cryptography

Symmetric key cryptography: algorithm types and modes, an overview of symmetric key cryptography, data encryption standard, variations of data encryption standard (DES), international data encryption algorithm(IDEA),RC4,RC5, advanced encryption standard (AES).

Unit IV: Asymmetric Key Cryptography

Asymmetric key cryptography: history of asymmetric key cryptography, an overview of asymmetric key cryptography, rivest-shamir-adelman (RSA) algorithm; symmetric versus asymmetric key cryptography.

Unit IV: Cryptographic Hash Functions

Applications of cryptographic hash functions, Secure hash algorithm, Message authentication codes- Message authentication requirements and functions, HMAC, Digital signature, Digital signature Schemes, Digital signature standards.

Unit VI: Steganography Techniques

Steganography, least significant bit method and message hidden in 6th and 7th bit method. Spatial Domain and Transform Domain Techniques, Latest Steganography algorithms.

RECOMMENDED BOOKS:

	1. Cryptography and network security by Atul Kahate by Tata
TEXT BOOKS	 Cryptography and networks security principles and practice by
	William stalling Prentice Hall, India
	1. Information and communication security by Hans Springer.
REFERENCE	2. Network security by Simonds, McGraw Hill, 1998.
	3. Internet Security by Derek Atkins Techmedia, 1998.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Mobile Computing

L T P 4 0 0

MODULE CODE	CSEN3212
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students an understanding of mobile computer systems particularly in the context of wireless network systems such as 2G/3G/4G mobile telephony, data networks, and other wireless networks and infrastructure.

- 1. Understand the basic concepts of mobile computing.
- 2. Be familiar with the network protocol stack.
- 3. Learn the basics of mobile telecommunication system.
- 4. Be exposed to Ad-Hoc networks.
- 5. Gain knowledge about different mobile platforms and application development.

LEARNING OUTCOMES:

Following this course, students will be able to:

- 1. Explain the basics of mobile telecommunication system.
- 2. Choose the required functionality at each layer for given application.
- 3. Identify solution for each functionality at each layer.
- 4. Use simulator tools and design Ad hoc networks.
- 5. Develop a mobile application.

MODULE CONTENT:

UNIT-I: Introduction

Mobile Computing, Mobile Computing Vs wireless Networking, Mobile Computing Applications, Characteristics of Mobile computing, Structure of Mobile Computing Application. MAC Protocols, Wireless MAC Issues, Fixed Assignment Schemes, Random Assignment Schemes, Reservation Based Schemes.

UNIT-II: Mobile Internet Protocol And Transport Layer

Overview of Mobile IP, Features of Mobile IP, Key Mechanism in Mobile IP, route Optimization, overview of TCP/IP, Architecture of TCP/IP, Adaptation of TCP Window, and Improvement in TCP Performance.

UNIT-III: Mobile Telecommunication System

Global System for Mobile Communication (GSM), General Packet Radio Service (GPRS), Universal Mobile Telecommunication System (UMTS).

UNIT-IV: Mobile Ad-Hoc Networks

Ad-Hoc Basic Concepts, Characteristics – Applications, Design Issues, Routing, Essential of Traditional Routing Protocols, Popular Routing Protocols, Vehicular Ad Hoc networks (VANET), MANET Vs VANET, and Security.

UNIT-V: Mobile Platforms And Applications

Mobile Device Operating Systems, Special Constrains & Requirements, Commercial Mobile Operating Systems, Software Development Kit: iOS, Android, BlackBerry, Windows Phone, M-Commerce, Structure, Pros & Cons, Mobile Payment System, Security Issues.

UNIT-VI: Third Generation (3G) Mobile Services and Wireless Enterprise Networks

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols.

RECOMMENDED BOOKS:

	1. Fundamentals of Mobile Computing by Prasant Kumar Pattnaik,
ТЕХТ ВООК	Rajib Mall, PHI Learning Pvt. Ltd, New Delhi – 2012.
	2. Wireless and Mobile Networks Architectures by Yi-Bing Lin
	&Imrich Chlamtac, John Wiley & Sons, 2001
	1. Mobile Communications by Jochen H. Schller, Second Edition,
	Pearson Education, New Delhi, 2007.
	2. Introduction to Wireless and Mobile systems by Dharma Prakash
DEFERENCE	Agarval, Qing and An Zeng, Thomson Asia Pvt Ltd, 2005.
REFERENCE	3. Mobile Cellular Telecommunications-Analog and Digital Systems
	by William. C. Y. Lee, Second Edition, Tata McGraw Hill Edition,
	2006.
	4. AdHoc Mobile Wireless Networks by C. K. Toh, First Edition,
	Pearson Education, 2002.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Assignment	Х	х		Х	

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	а	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes	1,4	1,2	2,4	3	1,3	5	4		1		

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - V

Image Processing

L T P 4 0 0

MODULE CODE	CSEN3213
CREDIT POINTS	4
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to provide understanding of Digital Image Processing and Image degradation or restoration process.

- 1. Understand concept of image processing and Image enhancement.
- 2. To do image enhancement in spatial domain and frequency domain.
- 3. Understanding of image compression and segmentations.
- 4. Develop the understanding of Image restoration.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Learn fundamentals of digital image processing.
- 2. Understand Spatial and frequency domains.
- 3. Learn Image compression models and techniques.
- 4. Demonstrate color image processing.

MODULE CONTENT:

Unit I: Fundamentals of digital image processing

Digital image processing concepts: origin of digital image processing, examples, fundamental steps in digital image processing, components of digital image processing system; Digital image fundamentals: image sensing and acquisition, image sampling and quantization, basic relationship between pixels.

Unit II: Image Enhancement in the Spatial Domain

Background; Basic gray level transformation; Histogram processing; Enhancement using arithmetic/logic operations; Basics of spatial filtering, Smoothing spatial filters and sharpening spatial filters.

Unit III: Image Enhancement in the Frequency Domain

Background; Fourier transform and the frequency domain; Smoothing frequency-domain filters; Shaping frequency domain filters; Homomorphic filtering.

Unit IV: Image Restoration

Image degradation/restoration process; Noise models; Types of filtering; Inverse filtering; Minimum mean square filtering; Geometric mean filter; Geometric transformations.

Unit V: Color Image Processing

Color fundamentals, color models; Color image processing: pseudocolor image processing, full-color image processing; Color transformations; Smoothing and sharpening; Noise in color images; Color image compression.

Unit VI: Image Compression & Segmentation

Image Compression: fundamentals, image compression models, error free compression, lossy compression; Image segmentation: detection of discontinuities, edge linking and boundary detection, thresholding, region oriented segmentation.

RECOMMENDED BOOKS:

ΤΕΧΤ ΒΟΟΚ	Digital Image Processing by Rafael C. Gonzalez & Richard E.Woods,						
	Pearson Education.						
REFERENCE	 Digital Image Processing by A.K.Jain, PHI. Digital Image Processing by Abhishek Yadav, Poonam Yadav, University Science Press. Digital Image Processing by Dr. Shashi Kumar Singh, University Science Press. 						

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type Of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	а	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1	1,4	3	1	2		3		1		

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

Professional Communication II

SUBJECT CODE	VALU0140
CREDIT POINTS	2
FORMATIVE ASSESMENT MARKS	
SUMMATIVE ASSESMENT MARKS	
END SEMESTER EXAM DURATION	
LAST REVISION DATE	

INSTRUCTIONS : The question paper will consist of ten questions distributed over three sections A, B and C Section A comprise of one question carrying very short answer type questions and is compulsory, Section B comprise of two short answer type questions and Section C comprises of five long answer type questions These sections will also have internal choices of questions.

OBJECTIVE

- 1. To learn the fundamentals of different structures of English grammar
- 2. To calculate the structures and patterns of English Language and to use them correctly in speaking
- 3. To learn about the creative literature writings
- 4. To improve speaking and writing
- 5. To inculcate professional skills of presenting and working
- 6. To understand different types of literatures and background with critical insights
- 7. To make students aware of the detailed exposition of English Language.

LEARNING OUTCOMES

Following this course students will be able to :-

- 1. Identify the different structures and patterns of English Language
- 2. To make students a good Public Speaker
- 3. To make students aware about different literature of the World
- 4. To make students speak well in Professional English Speaking and writing highly professional in particular
- 5. Know the process of Communication and its ethics
- 6. To make students write in professional manner

MODULE CONTENT

UNIT : I COMMUNICATION AND THEORIES

- Nature of Communication Pitfalls/One-way versus Two ways communication/efficient and effective communication
- Tenses-formation/efficient and effective communication
- Paragraph writing and usages of Comma's
- Presentation Skills
 - Literary Works
- The Bluest Eyes by (Toni Morission)
- Untouchable by Mulk Raj Anand
- BuchiEmecheta (In the Ditch)

UNIT : II INTRODUCTION TO THE NOVELS AND SHORTS STORIES (GRAMMAR ETHICS)

- Adverbs and Formal Words
- Using Different Commas
- Noun and the Numbers
- Nouns and (Count and Uncountable Collective and Abstract)
 - Interview Skills
- Short Stories
 - o Deliverance by Prem Chand
 - \circ Joothan by Prem Chand
 - o Great Expectation by Charles Dickens
 - DH Lawrence (Sons and Lovers)

UNIT : III BUSINESS COMMUNICATION

- Letter Writing Formal and Informal
- Letters of inquiry & Complaint
- Job Application and Resume
- Bio-Data
- Report Writing (Preparation/Planning/Structure/Matter Cover/Frontispiece/Title Page/Copyright-Notice/Forwarding Letter/Preface/Acknowledgements/Table of Contents/List of Contents/List of illustration/Abstract and Summary
- Adjective and their usage in a Language
- Gustave Flaubert (Madame Bovery)
- ShashiDespande (That long silence)

UNIT : IV DIFFERENT STRUCTURES OF ENGLISH LANGUAGE AND THEIR PATTERN

- Introduction to Semantics (Synonyms/Antonyms/Homophones Form and function of words
- Linguistic (various scientific theories of language)
- Passive voice and random topic writing and effective writing skills
- Syntax/Infinitive/Gerund
- Degrees (positive) (Comparative) (Superlative)
- Literary Works

- Virginia Wolf (To the light house)
- AS Byatt (Virgin in the Garden)
- Zora Neale (Their eyes were watching God)
- Lawrence Hill (The Book of Negros)

UNIT : V DIFFERENT ASPECT OF ENGLISH LANGUAGE AND ITS USE IN PROFESSIONAL COMMUNICATION

- Formation of adjectives from Noun
- Formation of adjectives from Verbs
- Some foreign words and their usage
- American and British Language
- Meanings of has/have
- Public Communication
- Communication, Papers reading and errors commissions

LITERARY WORKS

- a. Ian Mc Ewan :- Cement Garden
- b. Martin Amiss :- London Fields
- c. Murial Spark :- Prime of Mrs Jean Brodie
- d. Angela Carter :- Magic Toyshop

UNIT : VI LINGUISTIC AND ENGLISH COMMUNICATION

- Paronyms
- Linguistic and various stylistic theories in writing
- Synthesis
- Phonetics
- Reading Comprehensive and interpretation
- Note Taking/Making
- Summarizing
 - LITERACY WORKS
 - a. Noel Coward :- Private Lives
 - b. Arnold Wesker :- Chicken Soup with Barley

Recommended Books

Artificial Intelligence

L T P 3 1 0

MODULE CODE	CSEN3114
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The objective of this subject is-

- 1. To present an overview of artificial intelligence (AI) principles and approaches.
- 2. To provide the foundations for AI problem solving techniques and knowledge representation formalisms.
- 3. Learn different knowledge representation techniques.
- 4. To understand the applications of Al: namely Game Playing, Theorem Proving, Expert Systems, Machine Learning and Natural Language Processing.

LEARNING OUTCOMES

Following this course student will be able to:

- 1. Understanding of the Various Ideas in AI, Various Types of Expert systems
- 2. Implement AI algorithms
- 3. Compare different AI algorithms in terms of design issues, computational
- 4. Apply uninformed as well as informed search techniques for problems
- 5. Formulate and solve planning problems.

MODULE CONTENT:

UNIT-1:	Introduction	to Artif	ficial Intel	ligence

Foundation and history of Artificial Intelligence (AI), AI problems and techniques, AI programming languages, Introduction to LISP and PROLOG, Problem spaces and searches, Blind search strategies: Breadth first search, Depth first search, Heuristic search techniques: Hill climbing, best first search, A* algorithm, AO* algorithm; Game tree, Min-max algorithms, game playing- alpha beta pruning.

UNIT -2: Knowledge Representation & Predicate Logic

Representation & Mappings, Issues in Knowledge representation, predicate logic, representing knowledge using rules, Weak slot & filler structures: frames, semantic nets.

UNIT- 3: Symbolic reasoning under uncertainty & Statistical Reasoning

Non-monotonic & monotonic Reasoning, Probability and Bayes' theorem, Bayesian networks, Certainty factor and rule-based systems, Dempster-Shafer Theory.

UNIT- 4: Natural Language Processing

Principles of natural language processing, rule-based systems architecture, knowledge acquisition concepts.

UNIT-5: Planning

Representation for planning, partial order planning algorithm, learning from examples, discovery as learning, learning by analogy, explanation-based learning, neural network and its applications, genetic algorithms.

UNIT-6: Expert System and Applications

Introduction, Phases in Building Expert Systems, Expert System Architecture, Expert Systems Vs Traditional Systems, Truth Maintenance Systems, Application of Expert Systems, AI application to robotics, and current trends in intelligent systems.

EVALUATION

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - VI

Artificial Intelligence Lab

L T P 0 0 2

MODULE CODE	CSEN3115				
CREDIT POINTS	1				
FORMATIVE ASSESSMENT MARKS	25				
SUMMATIVE ASSESSMENT MARKS	25				
END SEMESTER EXAM DURATION	3 hrs				
LAST REVISION DATE					

OBJECTIVES

- 1. To teach the Programming constructs of PROLOG.
- 2. To understand and analyze operations on lists.
- 3. To make students familiar with problem solving techniques through search strategies.
- 4. To teach the implementation of various artificial intelligence problems.
- 5. To make students familiar with Implementation of expert systems.

LEARNING OUTCOMES

Following this course, students will be able:

- 1. To use various AI search procedures.
- 2. Understand different various knowledge representation techniques.
- 3. To develop an Expert system for medical diagnosis.
- 4. To design various AI search algorithms.
- 5. To apply knowledge representation, reasoning, and machine learning techniques to real-world problems.
LIST OF EXPERIMENTS

1.	Study of PROLOG.
2.	Write a program to solve any problem using depth first search.
3.	Write a program to implement Breadth first search (BFS).
4.	Write a program to solve any problem using best first search.
5.	Write a program to solve 8 queens problem.
6.	Write a program to solve 8-puzzle problem using best first search
7.	Write a program to solve Robot (traversal) problem using means End Analysis.
8.	Write a program to solve monkey-bananas problem.
9.	Write a program to solve traveling salesman problem.
10.	Write a program to find the solution of Water Jug problem.
11.	Write a program to design tic-tac-toe game.
12.	Write a program to find Hamiltonian path.
Experin	nents based on advanced topics:
13.	Write a program to implement N-Queen problem by iterative method.
14.	Write a program to develop an Expert system for Medical diagnosis.

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 50 marks for practical.

- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - VI

Java Programming

L T P 3 0 0

MODULE CODE	CSEN3116
CREDIT POINTS	3
FORMATIVE ASSESMENT MARKS	25
SUMMATIVE ASSESMENT MARKS	75
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

The aim of this subject is to provide good knowledge of java. It will also enable students to develop different application based on Java.

- 1. Learn the java programming language: its syntax, idioms, patterns, and styles.
- Learn object-oriented features of the Java language, such as encapsulation, inheritance and polymorphism; use data types, arrays and other data collections; implement error-handling techniques using exception handling, create and event-driven GUI using Swing components; and implement I/O functionality to read from and write to text files.
- 3. Introduce event driven graphical user interface programming
- 4. Retrieve data from a relational database with database
- 5. Develop platform -independent GUI

LEARNING OUTCOME:

- 1. Design and develop powerful GUI based components.
- 2. Create animation using applet, thread and awt controls.
- 3. Develop database applications.

MODULE CONTENT:

UNIT-I: Java Fundamentals

Features of Java OOPs concepts Java virtual machine Reflection byte codes Byte code interpretation Data types, variable, arrays, expressions, operators, and control structures Objects and classes

Java Classes: Abstract classes, Static classes, Inner classes, Packages, Wrapper classes, Interfaces, This, Super.

UNIT-II: Exception handling & Inheritance

Exception as objects, Exception hierarchy, Try catch finally, Throw, throws, Basics of Inheritance, Types of inheritance: single, multiple, multilevel, hierarchical and hybrid inheritance.

UNIT-III: IO package

Input streams, Output streams, Object serialization, Deserialization, file handling.

Multi-threading: Thread Life cycle Multi-threading advantages and issues, Thread synchronization.

UNIT-IV: Applet class

Applet life-cycle Passing parameters embedding in HTML.

Swing: Basics of Swing, Button, Radio Button, Text Area, Combo Box, Table, list, tree, progress indicator.

UNIT-V: AWT

Overview, Controls, Event Handling, Event Classes, Event Listeners, Layouts, Containers, Menu, Graphics, shape, areas, stroke, paint, image manipulation.

UNIT-VI: JDBC

The Design of JDBC. The Structured Query Language, JDBC Installation, Basic JDBC Programming Concepts, Query Execution, Scrollable and Updatable Result Sets, Metadata, Row Sets, Transactions, JNDI, Introduction of LDAP.

SEMESTER - VI

Java Programming Lab

L T P 0 0 3

MODULE CODE	CSEN3117
CREDIT POINTS	1.5
FORMATIVE ASSESSMENT MARKS	25
SUMMATIVE ASSESSMENT MARKS	50
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

OBJECTIVES

- 1. To learn the syntax and different data types of Java programming language.
- 2. To learn object-oriented features of the Java language such as encapsulation, inheritance and polymorphism, arrays and other data collections.
- 3. To implement error-handling techniques using exception handling.
- 4. To create event-driven GUI using Swing components and implement I/O functionality to read from and write to text files.
- 5. To introduce event driven graphical user interface programming.
- 6. To develop platform independent GUI.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Gain knowledge of the structure and model of the Java programming language.
- 2. Design and develop powerful GUI based components.
- 3. Create animation using applet, thread and AWT controls.
- 4. Develop database applications.
- 5. Develop software in the Java programming language.
- 6. Debug a software application written in the Java programming language.

LIST OF EXPERIMENTS

	a) Write a Java program that prompts the user for an integer and then prints out all the
1	b) Write a Java program to multiply two given matrices
1.	c) Write a program to demonstrate wrapper classes
	d) Write a program to add a Class to a package
	a) Write a program to show How Exception Handling is done in Java
2.	b) Write a program to show Inheritance.
	c) Write a program to show polymorphism.
3.	Write a Java program to show input/output handling.
4.	Write a program to demonstrate multithreading using Java.
	Write a Java program that implements a multi-thread application that has three threads.
5	First thread generates random integer every 1 second and if the value is even, second
5.	thread computes the square of the number and prints. If the value is odd, the third
	thread will print the value of cube of the number.
6.	Write an applet program to display moving banner.
7	Write a Java program to demonstrate the use of Java Swing components namely
/.	buttons, text boxes, lists/combos, menus etc.
8.	Write a java program to demonstrate List, Tree and Table in Swing.
9.	Write a program to demonstrate shape, areas, stroke, paint and image manipulation using AWT.
10.	Write a Java program to make calculator.
11	Write a Java program to store, delete and update data in a database with the support of
11.	JDBC-ODBC connectivity.
12.	Write a Java program that prints the meta-data of a given table.
Experi	ments based on advanced topics:
	Write a Java program that simulates a traffic light. The program lets the user select one
13	of three lights: red, yellow, or green with radio buttons. On selecting a button, an
15.	appropriate message with "stop" or "ready" or "go" should appear above the buttons in
	a selected color. Initially there is no message shown.
	Develop a mini project using Java-
	a) Game
14.	b) Text Editor
	c) Library Management System
	a) On-line Examination System

Note: At least 12 Experiments out of the list must be done in the semester.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

1	Internal Assessment	2	25
2	External Assessment	1	50

MAPPING OF COURSE LEARNING OUTCOMES

Student Outcomes	a	b	с	d	e	f	g	h	i	j	k
Course Learning Outcomes	1	2	2,6	5	4	2	6	3,4	6		

EVALUATION

At the end of semester, Subject teacher will submit an evaluation report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the subject with respect to its strengths as well as those areas which could be improved. The review report contains the following:

- Approved refinement decisions due for implementation,
- Actions taken based on previous subject review,
- Problems encountered in the subject delivery,
- Suggested remedies / corrective measures, and
- Report discussed and analysed, actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - VI

Software Engineering & Project Management

L T P 3 1 0

MODULE CODE	CSEN3118
CREDIT POINTS	3.5
FORMATIVE ASSESSMENT MARKS	50
SUMMATIVE ASSESSMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to teach students discipline of Software Engineering and to incorporate detailed knowledge of techniques for analysis & design of complex software intensive systems.

- 1. To make students aware of the evolution of computers in different generations including its classification in different categories based on its capabilities.
- 2. To acquire knowledge on major components of computers hardware, software, data and processes.
- 3. To get familiar with concepts of microprocessor interfacing and its applications.
- 4. To achieve an understanding on basic concepts of operating system and networking.
- 5. To demonstrate the working of system software.
- 6. To understand syntax and semantics of 'C' programming language.
- 7. To enable learner to build logic for a given problem and finally develop programs.

LEARNING OUTCOMES:

- 1. To introduce software engineering and to explain its importance in building large programs.
- 2. To understand the process of developing new technology and the role of experimentation.
- 3. To set out the answers to key questions about software engineering.
- 4. To develop skills that will enable students to construct software of high quality.
- 5. To introduce ethical and professional issues and to explain why they are of concern to software engineers.

MODULE CONTENT:

UNIT-1: Introduction to Software and Software Project Management

Emergence of Software Engineering, Software life cycle models; Software Project Management: project management concepts, software process and project metrics, project planning, project size estimation metrics, project estimation techniques, Empirical estimation techniques, COCOMO- A Heuristic estimation technique, staffing level estimation, team structures, staffing, risk analysis and management, project scheduling and tracking.

UNIT-2: Requirements Analysis and Specification

Types of Requirement, Feasibility Study, Requirement Analysis and Design: DFD, Data Dictionary, HIPO Chart, Warnier Orr Diagram, Requirement Elicitation: Interviews, Questionnaire, Brainstorming, Facilitated Application Specification Technique (FAST), Use Case Approach.

UNIT-3: System Design

Design concepts and principles: The design process, Design and software quality, Design concepts: Abstraction, refinement, modularity, software architecture, Effective modular design: Functional independence, Cohesion, Coupling; Design Heuristics for effective modularity.

Architectural Design: Software architecture, Data Design: Data modeling, data structures, databases and the data warehouse, analysing alternative architectural designs, architectural complexity; Mapping requirements into a software architecture; Transform flow, Transaction flow; Transform mapping: Refining the architectural design.

Unit-4: Testing and Maintenance

Software Testing Techniques, software testing fundamentals, white box testing, basis path testing, Black box testing, testing for specialized environments, architectures and applications. Software Testing Strategies: Verification and validation, Unit testing, Integration testing, Validation testing, alpha and beta testing; System testing: Recovery testing, security testing, stress testing, performance testing; The art of debugging: debugging approaches.

Unit-5: Activity planning

Objectives of activity planning, project schedule, projects and activities, sequencing and scheduling activities, network planning model, representation of lagged activities, adding the time dimension, backward and forward pass, identifying critical path, shortening project, precedence networks

Project Evaluation: Cost benefit analysis, cash flow forecasting, Cost Benefit evaluation techniques, Risk Evaluation.

Unit-6: Risk Management

Introduction: Nature of risk, managing risk, risk identification, risk analysis, reducing the risks, evaluating risks to the schedule, calculating the z values.

Software quality: Introduction, the place of software quality in project planning, the importance of software quality, defining software quality, McCalls Quality Model, Practical software quality measures, product versus process quality management, techniques to help enhance software quality.

RECOMMENDED BOOKS:

TENT BOOKS	1. Software Engineering – A Practitioner's approach by Roger S. Pressman (5th edition) 2001 MGH
TEXT BOOKS	 Software Project Management (2nd Edition) by Bob Hughes and Mike Cetterall 1000, TMH
	and Mike Coueren, 1999, 1MH.
	1. Fundamentals of Software Engineering by Rajib Mall, PHI
DEFEDENCE DOOVS	2. Software Engineering by Ian Sommer ville by Pearson Edu, 5
REPERENCE DOORS	edition, 1999
	3. Software Project Management by Bharat Bhusan Agarwal,
	Shivangi Dhall, University Science Press.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES:

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10
2.	Sessional Test	2	30
3.	Group Discussion	4	10
4.	End Semester Exam	1	100

MAPPING OF ASSESSMENT METHODS AGAINST THE LEARNING OUTCOMES

Theory:

Assessments	1	2	3	4	5
Class Test	Х	Х			
Quiz	Х		х	х	
Assignment	х			Х	

MAPPING OF COURSE LEARNING OUTCOMES

Program Outcomes	a	b	c	d	e	f	g	h	i	j	k
Course Learning Outcomes	1	2	1,4	2	1,2	1,3	1	2,5	5		

EVALUATION

At the end of semester, course faculty will submit an evaluation / review report. The purpose of this report is to identify aspects that will be highlighted by students and faculty's feedback for the course with respect to its strengths as well as those areas which could be improved. The review report contains the following areas:

- Problems encountered in the content delivery;
- Suggested remedies / corrective measures;
- Approved refinement decisions due for implementation;
- Actions taken based on previous course review; and
- Report discussed and analysed; actions taken as a result of this process and are communicated to the main stakeholders.

SEMESTER - VI

Wireless Sensor Networks

L T P 3 1 0

MODULE CODE	CSEN3221
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES:

The aim of this subject is to develop an understanding of sensor network technologies from three different perspectives: sensing, communication, and computing (including hardware, software, and algorithms) and their applications.

- 1. To learn different communication protocols employed in WSNs
- 2. To understand and analyse usefulness of OSI model for Communication System Design.
- 3. To learn an optimized selection of a WSN.
- 4. To make students familiar with the selection of the appropriate a WSN technology.
- 5. To make students familiar with the designing of a WSN.

LEARNING OUTCOMES:

Following this course students will be able to:

- 1. Architect sensor networks for various application setups.
- 2. Assess coverage and conduct node deployment planning.
- 3. Determine suitable medium access protocols and radio hardware.
- 4. Prototype sensor networks using commercial components.
- 5. Evaluate the performance of sensor networks and identify bottlenecks.

MODULE CONTENT:

UNIT-I: Introduction

Introduction to Sensor Networks, Unique constraints and challenges, Advantage of Sensor Networks, Applications of Sensor Networks, Mobile AdhocNETworks (MANETs) and Wireless Sensor Networks, Enabling technologies for Wireless Sensor Networks.

UNIT-II: Sensor Node Hardware and Network Architecture

Single-node Architecture, Hardware components & design constraints, Operating systems and execution environments, introduction to TinyOS and nesC, Network architecture, Optimization goals and figures of merit, Design principles for WSNs, Service interfaces of WSNs, Gateway concepts.

UNIT-III: Deployment and Configuration

Localization and Positioning, Coverage and connectivity, Single-hop and multi-hop localization, self-configuring localization systems, sensor management.

UNIT-IV: Network Protocols

Issues in designing MAC protocol for WSNs, Classification of MAC Protocols, S-MAC Protocol, B-MAC protocol, IEEE 802.15.4 standard and Zig Bee, Dissemination protocol for large sensor network.

UNIT-V: Routing protocols

Issues in Designing Routing Protocols, Classification of Routing Protocols, Energy-efficient routing, Unicast, Broadcast and multicast, Geographic routing.

UNIT-VI: Data Storage and Manipulation

Data centric and content based routing, storage and retrieval in network, compression technologies for WSN, Data aggregation technique, Applications: Detecting unauthorized activity using a sensor network, WSN for Habitat Monitoring.

RECOMMENDED BOOKS:

	1. Wireless Sensor Network by Raghavendra, Cauligi S,								
TEXT BOOK	Sivalingam, Krishna M., Zanti Taieb, Springer 1st Ed. 2004.								
	2. Protocols and Architectures for Wireless Sensor Network by								
	Holger Kerl, Andreas Willig, JohnWiley and Sons, 2005.								
	1. Wireless Sensor Network: Technology, Protocols and								
	Application by Kazem, Sohraby, Daniel Minoli, Taieb Zanti,								
	John Wiley and Sons 1st Ed., 2007.								
REFERENCE	2. Networking Wireless Sensors by B. Krishnamachari,								
	Cambridge University Press.								
	3. Wireless Sensor Network by Feng Zhao, Leonidas Guibas,								
	Elsevier, 1st Ed. 2004.

SEMESTER – VI

Advanced Computer Architecture	L T P 3 1 0
MODULE CODE	CSEN3222
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. Students will understand the Nature and characteristics of modern day computer systems.
- 2. To make student understand the tremendous variety exists from single chip microprocessors to super computers.
- 3. To teach the impact of rapid pace of change covering all aspects of computer technology from underlying integrated circuit.
- 4. To teach the complete knowledge of advanced computer architecture and make students familiar with internal structure of advanced architecture.
- 5. To teach the internal concept of memory and their types.

LEARNING OUTCOMES

On successful completion of this course you will be able to:

- 1. Describe the principles of computer design.
- 2. Classify instruction set architectures.
- 3. Describe the operation of performance enhancements such as pipelines, dynamic scheduling, branch prediction, caches, and vector processors.
- 4. Describe the operation of virtual memory.
- 5. Describe modern architectures such as RISC, Super Scalar, VLIW (Very Large Instruction word), and multicore and multi-CPU systems.
- 6. Compare the performance of different architectures.

MODULE CONTENT:

Unit-I: Architecture and Machines

Some definition and terms, interpretation and microprogramming, The instruction set, Basic data types, Instructions, Addressing and Memory. Virtual to real mapping. Basic Instruction Timing, Time, Area and Instruction Sets.

Unit-II: Cost and area

Time, cost-area, and technology state of the Art, The Economics of a processor project: A study, Instruction sets, Professor Evaluation Matrix.

Unit-III: Cache Memory Notion

Basic Notion, Cache Organization, Cache Data, adjusting the data for cache organization, write policies, strategies for line replacement at miss time, Cache Environment, other types of Cache. Split I and D-Caches, on chip caches, Two level Caches, write assembly Cache, Cache references per instruction, technology dependent Cache considerations, virtual to real translation, overlapping the T-cycle in V-R Translation, studies. Design summary.

Unit-IV: Pipelining

Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, branch prediction, Arithmetic Pipeline Design, Computer arithmetic principles, Static Arithmetic pipeline, Multifunctional arithmetic pipelines.

Unit-V: Concurrent Processors

Vector Processors, Vector Memory, Multiple Issue Machines, Comparing vector and Multiple Issue processors.

Unit-VI: Shared Memory Multiprocessors

Basic issues, partitioning, synchronization and coherency, Type of shared Memory multiprocessors, Memory Coherence in shared Memory Multiprocessors.

RECOMMENDED BOOKS

TEXT BOOK	 Advanced computer architecture by Kai Hwang, 2000, TMH. Pipelined and Parallel processor design by Michael J. Flynn – 1995, Narosa.
REFERENCE BOOK	 Computer Architecture and Organization by J.P. Hayes, 1998, MGH. Computer Architecture: A quantitative approach by D.A.Patterson, J.L.Hennessy,2002, Morgan Kauffmann. Advanced computer architecture by Hwang &Briggs, 1993, TMH.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES

This subject will be evaluated for a total of 150 marks for theory.

Theory:

Assessment #	Type of Assessment	Per Semester	Maximum Mark
1.	Class Test	4	10

SEMESTER - VI

Cloud Computing

L T P 3 1 0

MODULE CODE	CSEN3223
CREDIT POINTS	3.5
FORMATIVE ASSESMENT MARKS	50
SUMMATIVE ASSESMENT MARKS	100
END SEMESTER EXAM DURATION	3 hrs
LAST REVISION DATE	

INSTRUCTIONS: In total EIGHT questions will be set. Question ONE will be compulsory and will cover all units. Remaining seven questions are to be set taking at least one question from each unit. The students are to attempt five questions in total, first being compulsory.

OBJECTIVES

- 1. To introduce the broad perceptive of cloud architecture and model.
- 2. To understand the concept of Virtualization.
- 3. To understand the features of cloud simulator.
- 4. To apply different cloud programming model as per need.
- 5. To be able to set up a private cloud.
- 6. To understand the design of cloud Services.

LEARNING OUTCOMES

Following this course, students will be able to:

- 1. Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing.
- 2. Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
- 3. Explain the core issues of cloud computing such as security, privacy, and interoperability.
- 4. Identify problems, and explain, analyse, and evaluate various cloud computing solutions.
- 5. Attempt to generate new ideas and innovations in cloud computing.

MODULE CONTENT:

UNIT-I: Introduction

Foundations: Introduction to Cloud Computing, migrating into a cloud, enriching the 'Integration as a Service' paradigm for the cloud era. The enterprise cloud computing paradigm.

UNIT-II: Cloud Architecture and Model

Technologies for Network-Based System: system models for distributed and cloud computing, NIST cloud computing reference architecture; Cloud Models: characteristics, cloud Services, cloud models (IaaS, PaaS, SaaS), public vs private cloud; Cloud solutions, cloud ecosystem, service management, computing on demand.

UNIT-III: Virtualization

Basics of Virtualization, types of virtualization, implementation levels of virtualization, virtualization structures, tools and mechanisms, virtualization of CPU, memory, I/O devices, virtual clusters and resource management, virtualization for Data-center Automation.

UNIT-IV: Cloud Infrastructure

Architectural design of compute and storage clouds, layered cloud architecture development, design challenges, inter cloud resource management, resource provisioning and platform deployment, global exchange of cloud resources.

UNIT-V: Programming Model

Parallel and distributed programming paradigms. MapReduce, Twister and Iterative MapReduce, Hadoop Library from Apache, mapping applications, programming support,

Google App Engine, Amazon AWS, cloud software environments, Eucalyptus, Open Nebula, OpenStack, Aneka, CloudSim.

UNIT-VI: Security in the Cloud

Security overview, cloud security challenges and risks, software-as-a-service security, security governance, risk management, security monitoring, Security Architecture Design, data security, application security, virtual machine security, identity management and access control, autonomic security.

RECOMMENDED BOOKS

TEXT BOOK	1.	Cloud Computing: Principles and Paradigms by Rajkumar Bi.
REFERENCE	 1. 2. 3. 4. 	Distributed and Cloud Computing, From Parallel Processing to the Internet of Things by Kal Hwang. Geoffeiy C.Fox. Jack J.Dongarra, Morgan Kaufmann Publishers, 2012 Cloud Computing: Implementation, Management, and Security by John W.Rittinghouse and James F.Ransome, CRC Press, 2010 Cloud Computing, A Practical Approach by Toby Velte, Anthony Velte, Robert Elsenpeter, TMH, 2009. Cloud Computing – insights into New-Era Infrastructure by Kumar Saurabh, Wiley India,2011.

METHODS OF TEACHING AND STUDENT LEARNING

The subject is delivered through lectures, on-line support, text book / course material reading and practical exercises. Some videos will be shown to demonstrate certain concepts and research areas will be discussed. Resource material is provided with the help of PDM Educational Directory Services (PEDS).

ASSESSMENT METHODOLOGIES

This subject will be evaluated for a total of 150 marks for theory.

Theory:
